1- Central Electronics 600L amplifier, untested, FP is Excellent, cab is good , needs the feet, copy of schematics only. Price is $300.
2- Hallicrafters SX-101 with 160 meter band, have two, both have chipped main knob, both play, one needs align, etc. the other is much better, Very Good+, easy, price is $150 & $200, no papers.
3- National NC-300, plays nice, all complete, excellent, needs knobs cleaned & polished, cab. is nice $300.
4- Same as above, not as nice, plays $150.
5- National NC-303, non original cabinet but a real nice one, plays, $300.
6- Hallicrafters SX-101, later version without 160 but has scales for 6 & 2 meters, Plays, needs Alignment, tubes etc. Very Nice $175.
7- HALLICRAFTERS SX-28, nice. plays, $400.
8- Johnson Viking II, factory wired, all original, working, FP is Excellent, has some paint chips around the FP on the top edge, $300. Not many originals around, needs a few tubes, gets 75 watts out, Audio ok.
Please do not e-mail for info if you are not even thinking of picking any of them up locally. I guess they could be shipped but the Shipping cost would be very expensive and I really don't want to get invloved at this time.

Why can't you just buy a rig and be happy with it without worrying about what the other hams are doing with their dollars? If someone wants to dump their HF radio for a new one every year, I have NO problem with that! That just means more used equipment on the market, and more profits for companies that help support ham radio by providing equipment. Face it, ham radio is not a mass market business. It costs money and time to develop the fantastic equipment that we have available to us. If people didn't buy radios, there wouldn't be radios to buy! Now some purists might like this idea but I'm not an RF engineer and I couldn't build a simple rig if my life depended on it. I enjoy the operating aspect. Icom, Kenwood, Yaesu, Ten-Tec and all the others are doing ME a valuable service by having equipment available for me to buy on any given Saturday when the urge strikes me. It's a given, like everything else on the commodity market, that what you buy doesn't EARN you money, it depreciates. Boy, I wish my Subaru didn't depreciate, but would it stop me from buying another Subaru, especially if I really enjoy driving a new car? Hell no. It's life, it's the market economy, deal with it, or build your own damn radios. Just don't expect Icom to be charitable and withhold the march of progress and new products just to make you feel better about the rig YOU bought. Finally, I see MANY people getting VERY fair prices for used equipment. Sometimes TOO fair (for the seller, but not the buyer). Perhaps you're one of the jokers that put their 5 year old dented and abused radios up for the price of a new one... juuueeezzzz...

Beerus

PS: Icom, bring on the IC-756 Pro2!!

It's been so long, I'm not sure without seeing a picture, but it may be
to reverse the split if I remember right. Say you are on 146.88 with the
top button on - duplex. It seems the other one may have reversed the
split for a quick way to listen to the input. You would then be
receiving on 146.28 and transmitting on 88. But I may be wrong on this.
Been 15 years or more. I can probably dig up an old ad in a QST. That
might prod my memory better. MK

In a previous post, I also reported success with a WWVB clock in the basement. About the only thing they DON'T like is being mounted on a wall that has aluminum foil on the back as a moisture barrier.

All of the WWVB clocks I've seen seem to try syncing at 0100 Eastern Time, or about 0500UTC. The signal is the strongest, i.e. a specific number of microvolts per meter, covers almost all of the US between 0400UTC and 0800 UTC. There used to be some coverage maps on the WWVB site, but I haven't run across them during the last 9 months. I _DID_ print them when I saw them, and they're somewhere in the house.

Some of the clocks will initially try to sync every X hours, where X can be 2, 3, or 6. If you don't manually set the date/time on them, they can't really figure out when the best time is, so they don't have much choice but to sample every so often. Some clocks also have a "manual sync" button that you can press to force the clock to begin a receive cycle. My WWVB watches have such a button, but they have had no problem syncing at 1AM for as long as I've owned them (the first one was just over a year). I just got a catalog in the mail today and the price is now down to $49.95 (I paid $79.95 for the first one and $59.95 for the second one which I wore while getting the first one repaired).

For an accurate time junkie like me, I just love it when my watch is more accurate than the multi-thousand dollar satellite clock at work !

Right on, Beerus - whatever your name is! <:}

Some people must go crazy over the computer scene if they get this upset over ham radio equipment models changing every year or two . . .

Ham radio is a *business* like any other, and business is driven by *marketing* and *sales.* Not by engineering. . . as long as there is a perceived market for upgraded and new equipment, the wise and capable manufacturer will put his resources on providing that market with what it appears to need and want, however often new products and upgrades are forthcoming.

In the case of ham radio products, it has been my experience over many, many years that time always manages to produce new products that are sometimes highly superior to those they supercede. The miracle to me is that they can now offer so much more performance and capability for very little more money, if any. Productivity has really made a difference in the price of amateur radio gear, just as it has in the computer business.

As one fellow once wisely posted, buying a particular brand of radio does not place one on the Board of Directors or in the CEO's office to make decisions as to products and market timing.

New car models come out every year . . .

If you have a real hangup about flat SWR, use a dummy load. They're flat everywhere. If you want to communicate, my advice on your SWR is fagetaboutit. If your coax between the rig and SWR meter isn't an electrical 1/2 wavelength, the readings are probably wrong anyway. I agree with the previous comment-in a mobile installation, a field strength meter is a much better indicator of antenna performance. Greg K3EWZ (ham for 20 years before I owned an SWR meter)

Source record: 56297

Absolutely right, Bill.

If the transmitter continues to put out the same power for 1:1 and 2:1, the only difference in radiated power will be in the added loss in the coax as the SWR rises. For the typical very short coax run in mobile installations, the loss is negligible at most typical SWR values over a band.

I would complain a little about putting the FS meter too close to the car/rig though. The problem with a FS meter is that it is measuring the total field that it is within. And we can never be sure how much of that field is coming from the antenna, the feedline, the rig, the chassis of the vehicle, etc. I would put it much further away and get some binoculars or a buddy to eyeball it!

As a relative test, though, to prove your point about SWR, the hood is fine! <:}

I recommend using a GPS reciever as a clock. That way you will have a GPS
to play with after you know what time it is.

Thanks to all who answered my question. The unanimous consensus is
that the mod opens up all frequencies between 1.8 and 30 MHz. It
was also pointed out that the mod is different for the (G) models:

Hi and thanks for reading this. I own a 1999 Jeep Cherokee sport. When I operate my Icom 706 Mark IIG on the low bands (40 & 75 meters) and the vehicle is running I have a constant S-8 noise level. I have unhooked the dc power cord from the radio and ran it off a battery and the noise was still there. I pulled the antenna off and it went away, which teles me the noise is being radiated. I suspect the fuel pump at this time, but if it is the fuel pump what would the fix be ? I was hoping another Jeep owner might have some suggestions or confirmed this problem on another vehicle.

It has been somewhat interesting in reading all the replies to
this question. I guess you could compare it to a common saying,
about everyone has an opinion, just like everyone has a rear.

Back to the point, today most of the radios are solid state. The
design of the solid state radio PA section takes into
consideration the reflected power from the antenna. The more
reflected power, the more heat the transistors have to deal
with. It is possible to destroy the PA stage in a transmitter
with a high reflected power.

It is always best to tune the antenna to have the lowest
reflected power you can get it to have. This give the most power
radiated into the antenna. The more output into the air, hence
the better your range will be. That is physics, try as you want
to change the facts, they still are the facts.

Use a watt meeter to measure the transmitter output power and the
reflected power. Use a low power slug to measure the reflected
power. Call a SWR meter what you want. I prefer to use a good
watt meter.

I seldom use profanity on the internet. It was just one of
those moments when I felt passionate about the topic and let
slip with a minor blurb. Wouldn't you know that it was the
time when some self appointed nitwit decides to take a swipe
at me.

It never ceases to amaze me how someone sitting behind a
keyboard can decide that it is his turn to run the world. So
be it.

Where have you been, George?

Do you think that I would mention something like this if this were typical behavior for a manufacturer in this industry? Now that would be idiotic.

It is the fact that Icom is not behaving normally that ticks me off. As far as not being on the board of directors - wanna bet? I, and every other ham, sits in the most powerful position of any company - its customer base. Without us, there is no Icom at all.

Furthermore, I wouldn't mention the subject at all if I did not like Icom products at some level. I feel I have a vested interest in the outcome of this latest marketing ploy. I would like to see them return to a more stable marketing platform.

You and the other gentleman sound as though I should be grateful that Icom exists. Icom should be grateful that we exist. Without us there is no Icom.

If there wasn't money to be made in amateur radio sales, you can bet that there would be no products available at all. Personally, I see no shortages on the horizon, do you?

Don't cut it!!! You will not see any measurable improvement in output power
and there will certainly be no difference to the receiving station. For
some reason there is a prevailing 'it's gotta be 1:1 or it's no good' idea
and it simply isn't true. Anything under 2:1 is perfectly acceptable.

Replying to myself here....
FYI...I popped open the power supply on my worst offending machine and as suggested on N1LO's page
http://www.qsl.net/n1lo/rfi.txt I find there is NO RF filtering in my supply.....Oh yes, there are silk screens on the board
for filter components, but there are also some nice white jumper wires to jumper around the missing parts!
Excellent page, Mark! It certainly pointed me in the right direction.

No wonder it's S9+20 on 80 meters. I haven't used 80 or 40 all year because of this....

I guess the answer is to install an IEC power connector with built-in filter or install a filter internally.
There's PLENTY of room, since about a fifth of the board is EMPTY.
I'll try to remember to post an update after I do that.

Beware of the generic power supplies if you intend to use your computer when the HF rig is on.
For most folks (even me before I started using HF again) the supplies are probably OK, but
for HF/MF/LF enthusiasts, look for a better power supply.

So for fun, I popped open an old Compaq 486 power supply...very nice filtering included.
And my 200 MHz Pentium IBM box...nice filtering there too. I don't notice either of them on HF.
The XYL's HP Pentium 100 box is clean too.
The commercially-made boxes seem well-made. Of course HP,IBM and Compaq are some of the top brands.
My "E-machine" box is also noisy. It's been a workhorse box, but noisy on HF.
(sure have a lot of computers around here).

I do like to build PC's and will continue to do so (though the economy of doing so gets less all the time).
But from now on better power supplies will be used, if I can find them.
Or I'll have to add filtering.

So my son's PC (built of many of the same components as mine - AMD processors) and mine are both going to be outfitted with some EMI/RFI filtering and hopefully we can all compute and I can work HF at the same time and
try out PSK31 and RTTY on 80 and 40!

73 and good DX (if you can hear it over the noise)

Ed,
Don't sweat it.
If what you say in your first sentence is true, I don't think that people
will hold it against you in the long run.
Once in a while people feel passionate, or post after having too many
beers, and regret what they posted later.
A one time error in judgement shouldn't make you lose sleep.
Every active poster, including myself, must have submitted at least one message
to a newsgroup that they later felt was inappropriate.

One problem with GPS receivers, at least my Garmin G3, is that indoor reception is very poor or non-existant. They really need an unobstructed view of the birds. It is adequate when I'm up in the 2nd floor (attic, actually). Also they tend to eat batteries and don't show you the temperature like the WWVB clocks do.

Dino, I saw that pair of clocks for $29.95, but decided not to buy them because they were just too small for my aging eyes to focus on. Maybe the larger ones have bigger or better antennas. Also, orientation may help, as will placing the clock on the Colorado side of your dwelling at a window. I found the little antenna on the Radio Shack $15 clock to be sensitive to rotational positioning. It's just a small loopstick.

I think the original question was whether or not to buy a 756PRO now or wait for the PRO II.
I guess that would depend upon the price of the PROII, which is unknown at the moment, but I would imagine
it would be significantly more than what the PRO is going for now ($2300 US).

I just bought a 756PRO and think that it is an excellent buy at it's current price. I am not especially impressed with
the small improvements that are being offered on the PROII and will not even think about upgrading.

As to the debate about upgrading and ICOMs marketing techniques, it is not any worse than the auto manufacturers
who offer upgraded versions that depreciate last years model. We are all able to make choices in life and if having
the latest and greatest is what you want, then go for it. I can't blame ICOM for offering upgraded or improved
versions of their product. If there weren't a market for such, they simply wouldn't sell them.

Okay
Let me explain
This guy purchased an AOR 8200B from us and decided he did not like it and asked if he could change it for an Alinco DJX-2000, Now he made all sorts of claims about this AOR being the biggest pile of trash ever made (strange there are so many satisfied people out there with them) anyway I agreed to send an alinco and charge him an additional $100 which he agreed to.
Anyway I sent out the Alinco before receiving the AOR back,,, now the AOR arrived in a copal of days and I had to sell it as used and heedless to say the new owner is completely happy...
Anyway, This guy gets the Alinco and states it smells of smoke and looks like the battery has a small mark on it, Now this was a brand new and unopened box, well I have offered to replace it with another new unit FREE of charge ad this guy will not send his original unit back until he receives a replacement from us, now I do not now of a company out there who will replace a unit without first receiving the other unit back.
Anyway he is now upset at me and I guess wishes to attempt for me to look bad, Well I have put across my version
So there you have it
For what it was worth
Thanks for reading
Best Regards

I believe these guys make the best power supplies:

http://www.pcpowercooling.com/home.htm

I've used a couple of their supplies in the past, and they're a cut above the
generic crap. A little more expensive, but you get what you pay for.

You could always querry them about their rfi specs.

Here is the plan:

Subscribe to amateur radio magazines, but when they arrive, don't read them. Throw them in a pile in the closet. When the oldest one is 5 years old, take it out and read it. Read the new equipment reviews as to what is the latest and greatest.

Then go find a used one of that model at a fraction of the "new" cost described in the 5 year old article.

Always stay 5 years behind in your reading. Learn of new models when they are, in reality, five years old. Then you can upgrade to what is, to you, the latest and greatest, at a small fraction of original cost.

I actually know somebody who does this in indulging their "high end" audio hobby.

I have to agree with most of what you have said, Bob.

I do liken Icom's new marketing strategy to that of the automakers. I guess I'll have to buy my Icom rigs the same way I buy automobiles, that is, two or three years old. They don't sell me new cars because of the massive depreciation that occurs as soon as it is driven off of the lot. Icom can have it its way.

FS-Celwave PD-526 UHF 6 Cavity Duplexer "Reduced"

Was $375--NOW $300 + Shipping

Physically, the unit is fine. It has been in and out of a rack a few times so of course there is some wear on the metal cabinet. Nothing too harsh, just a little faded paint etc. The cable plugs don't shine as much as they used to but as for what counts, performance, It works great

Contact: Ligosa@aol.com
73's Chris KC2CMP

Here is Info from the Celwave website on the unit:

These RFS units use a total of six pass-reject dual-notch resonators with three resonators per channel as the normal arrangement. They are suitable for many applications other than duplexing and their dual-notch circuitry provides a pseudo band pass characteristic for high Tx-Rx isolation. These units are available with reversible mounting brackets to allow flush rack mounting with connections in the rear.
Product Specifications
Frequency Band 380 MHz - 512 MHz
Application UHF
Type Base Station
Frequency Spacing-MHz 3
Tx to Rx Isolation - dB 100
Insertion Loss- dB 1.0
Frequency Range - MHz 406-470
Tx/Rx Bandwidth - MHz 0.025
Connector Type n-female
Rack Mount Yes
Mounting Standard
Frequency Spacing, Min. - MHz 3
Tx Bandwidth - MHz 0.025
Rx Bandwidth - MHz 0.025
Continuous Power Input, Max. - Watts 250
Insertion Loss, Tx - Ant. - dB 1.0
Insertion Loss, Rx - Ant. - dB 1.0
TX Noise Suppression at Rx Frequency - dB 100
Rx Isolation at Tx Frequency - dB 100
VSWR, Max. (50 ohms) 1.3:1
Connectors - Ant. Port N-female
Connectors - Tx Port N-female
Connectors - Rx Port N-female
Temperature Range - °C -30 to +60
Height - in. (mm) 5-1/4(133)

Width - in. (mm) 19(483)
Depth - in. (mm) 14(356)
Mounts in 19" (483mm) EIA Rack (Yes/No) Yes
Weight - lbs. (kg) 23(10.5)

Features/Benefits
• High isolation
Minimizes interference.
• Temperature compensated
Assures consistent performance across temperature and power range.
• Low insertion loss
Maximizes effective radiated power.

I believe that someone has the facts wrong. There is a recorder on the Pro version and what they have done is just make it easier to use (thats the way I understand it anyway). I really see very little difference between their to be new unit and the current unit from the material that I have read about it.

Just a quick ??
I know the mod requires the change of the UC 1251 to a UC1250.
Is the UC1250A the same as the 1250?
Where can I get the UC1250 & price?
Thank you in advance...
Please e-mail me direct at..
tramd300@goingplatinum.com

Hello,

I have for auction a MT 1000 that needs a little help. The fuse is blown, and I don't know why. If you can or want to fix it, be my guest. Low, low reserve as it is a fixer-upper.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1260969273

I need cash before school starts and I have too much stuff laying around that I am not using. Check out my other auctions for more electronics. Thanks.

Model Ha-202
Series no. 03608
13.6 VDC
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1261066721

Price is $24.95 w/ NO Reserve!!

This is a nice little 2 meter 144-148 Mhz Heathkit Power amp. I would guess the output is around 30-40Watts. It has a BNC connector for the input as well as the output. That will surely save time and power by not having to couple to UHF style connectors. Also there is a schematic and a service bulletin on the ad, which is interesting. Thanks for looking.

Howdy Bill,
Here's a way you "might" ascertain that your RFI is from the fuel pump. Most (in my experience) vehicles (in the last 15 years) run the fuel pump in order to prime the system for approximately 2 seconds after you turn the ignition switch to run but before you crank over the engine.
(many people don't wait for this to time out and, at any rate, once you begin to crank the fuel pump comes back on so its not noticed). I'd recommend having your rig on a known-affected frequency (confirm by running the engine)...then shut off the engine and, after a few seconds to determine the freq "quiet"....turn it to run only and see if the noise reappears (should come on then shut off). As for a "cure", well, I'd check with your local Chrysler dealer for an RFI kit for the fuel pump (if this seems to be the problem). I WOULDN'T recommend trying external
capacitors/chokes etc for the following reasons (or at your own risk / experience if you're so inclined) - 1. Poor physical characteristics of many "radio/electronics" grade components might break down causing shorts
in fuel pump wiring (or at best will open and not work). 2. (electric) fuel pumps are, at best, a part with a low lifespan on many vehicles and even that requires best quality, non-corroded uncompromised connections to ensure least voltage drop etc - unless you are confident with making best quality/strain relieved connections for severe environment service, I'd back away (a factory kit, if it exists will be designed with this in mind).....not lastly, it might affect/violate any vehicle warranty or worse (I'm not a lawyer). 73 - Best of luck

Gord

Specific to the recorder function, it is my understanding that the present PRO cannot transmit the contents of any of its voice-recorder buffers. That feature was omitted in production for the US markets. Evidently, what the PRO II does is implement that feature that was already available on PRO models available elsewhere in the world. I do not know if there is an FCC problem - I think that there is - with the retransmission of recorded signals or if such a problem has been resolved. In any event, the II is not yet available in the US and that feature may well still be suppressed in the country.

As a PRO user now for nearly a year with hundreds of hours working all modes and most bands, I see some merit to the PRO II upgrades, but nothing that would induce me to trade my present radio. It has been absolutely flawless since new. It ranks far ahead of my IC-765 - which I used daily for over 10 years - and my Kachina 505DSP which I have used for nearly two years. I would enjoy some of the "upgrades" but not to the point of trading radios. As an experienced ham with professional degrees in electrical engineering and a lengthy career in communications, I had yet to uncover the "flaws" that willy refers to in his postings.

George, have you listen and/or tested specifically for a problem with 3rd order IMD and limited dynamic range in receive?

I've read user complaints in those areas with the Pro, and I believe the ARRL Labs report on the rig noted problems. Don't remember for sure.

I've not noticed any receiver IMD or overload problems in normal operation of my PRO. I have seen the complaints which may be related to multi-station field day setups or contest weekends on the lower bands. The PRO-II is suppost to improve the dynamic range.

The ARRL report noted "key clicks" when tuning close to a CW station with narrow filters. According to Icom this is related to the filters being sharp enough to pick up the CW sidebands without hearing the tone. The PRO-II supposedly lets you modify the shape factor to something you are more comfortable with (i.e. you can ruin the filters if that's what you want to do). I believe there is a ROM available that will do that on the PRO as well.

Belive me, I don't complain about much. I don't mind paying for
something if it is exactly as represented by thew seller. Something was
definitely wrong with the condition of this radio when I got it. I have
bought thousands of dollars worth of new equipment and never have I has
something come in the condition this one came in. The radio had a
cigarette smoke smell, the battery was badly scratched, the accessories
were wrapped in crumpled up bags, the battery does not hold a charge for
very long. There are other things but the bottom line is that I have
paid over $600 for a used radio that was supposed to be new. On top of
it he charged me $14.00 for shipping and insurance and did not even
insure. The package came in with a $5.00 label on the US Postal box.
Martyn did not even put packing in the box...he just dropped the radio
box in a box 2.5 times its size and let it bounce around during
shipping. When I sent the AOR back I packed it with popcorn and insured
it for the proper amount the lady at the post office said the shipping
would be $14.00 without insurance and $15.25 with insurance. I paid to
have it insured. I have a right to be upset.

1748. IC-735 RF Feedback

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-03 00:15:18 UTC
From: John Pinckney <longleaf@pop.erols.com>
Message-ID: <3B69ED16.1606AD4C@pop.erols.com>
Source record: 56152

Help! I'm having serious problems with RF feedback on 20 phone (less so on 15...) w/an IC-735 that I've successfully used mobile in the past, but is now giving lots of grief! I'm trying to use it in a '96 Jeep Grand Cherokee using Hamstiks on a 3-magnet base. I'm powering the '735 straight off the battery, and I've tried grounding every way I can think of. Latest failed experiment was going straight to the bolt on the fender which has a heavy gauge cable from the battery 's negative terminal on it.

Any and all suggestions for curing this beast would be appreciated!

TNX/73!

My nephew just got his new Icom Pro and says that while he was listening it beeped about 5 times and shut itself off (he was not transmitting). He turned it back on, and it everything seemed okay.

He doesn't have Internet access so I told him I'd ask if anyone else has had this problem. Is this a known "glitch" or something?

Thanks for any help -

John

1752. Icom 746 question

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-03 01:23:57 UTC
From: rshprd <ka9flx@arrl.net>
Message-ID: <N2na7.210339$mG4.96480374@news1.mntp1.il.home.com>
Source record: 56156

I recently got my hands on a IC-746. Overall, I am fairly impressed with the unit, but I have a question (actually 2)

1.) What exactly is the monitor function supposed to do/provide?

The manual is EXTREMELY vague and simply states that the feature allows you to "monitor you signal and adjust for best quality".

I have activated the function during transmit, but cannot see (or hear) anything different from normal operation.

What the heck is this suppose to provide?

2.) ALC meter.

Now this probably seems like a stupid question, and perhaps my problem is that I am use to analog meters.

However, I have noticed that with both the standard hand microphone, and the SM-20 desk unit, setting the mic gain to "stay within the ALC range" does not provide much RF output (yes, on a peak reading Bird wattmeter).

Raising the mic gain to a level which provides a better output and still maintaining a clean signal (monitored off air on a scope), causes the ALC to read substantially out of the "normal range".

FYI, this occurs with or without the speech compressor on!

My question:
Is my ALC monitor circuit out of calibration/defective, or is there so much processing delay for the digital meter, that it simply does not provide accurate/real time measurements for voice, as opposed to using a constant tone?

I know how to use ALC for setting levels on HF rigs. I am concerned that the circuit is not working properly.

Have any other 746 owners seen and/or experienced this?

Thanks,
Bob - KA9FLX

Hi everyone!

I have been interested in amateur radio for many years but have never gotten a license. My knowledge is very superficial.

I am interested in the subject radio for backpacking and expeditionary usage. My other choice would be an Iridium satelite telephone. The primary usage would be in emergencies. It could also be a lead in to amateur radio usage on a great frequency.

Is its frequency coverage (assuming I get the highest no code license) and output (5W max) sufficient to call in the commandos, anywhere in the world?

Is there a good chance I could contact someone for help on an average day? What about a day with poor atmospherics?

Are there specific emergency frequencies in the HF range that are monitored for such calls?

The bottom line is, is this product going to help get me saved, when I'm alone, in trouble, and in a remote location?

Any other biased opinions would be helpful.

Thanks!

George Stewart

There's a timer OFF function that may have been set. It beeps 10 times before shutting off the rig.

hey there
i am not sure about the ALC but the monitor button allows you to hear what you actually sound like over the air i think if you push iut then transmit you will hear yourself over the speakers or maybe have to plug in a headphone to keep from feeding back

1761. HOW TO Restore "Canned" Power Capacitors -HQ-145

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-03 04:40:13 UTC
From: chaconne@worldnet.att.net
Message-ID: <3b6a2997.1674142@netnews.worldnet.att.net>
Source record: 56165

I have a vintage HQ-145 receiver, one I would have killed to get 40 years ago when I was a kid. This was a throw-in with an amplifier I bought used from an estate. The receiver works fine except that I am getting a "positive smoke test" from the power capacitor, which is one of those three capacitor-in-one can things. I am, of course aware that I could just obtain three capacitors of suitable values and connect them on the appropriate connectors/solder lugs after removing the present three section capacitor.

It appears that anything resembling the original can is no longer made. Is it possible to disassemble the original guts [I've never taken one apart] and put three capacitors in the original can??? This is in the interest of aesthetics.

Jon Teske, W3JT

1762. Re: HOW TO Restore "Canned" Power Capacitors -HQ-145

Source record: 56166

I would leave the original can in place "for aesthetics" and put the
replacement caps under the chassis - Lord knows there is plenty of room
under there.

I would doubt very much that you could find an exact replacement can - and
if you did, it would probably cost more than the receiver is worth! <:}

Weren't those great old radios?

Actually, there are companies that will do this. I know Hewlett
Packard does. The credit card merchant service provider I used to use
does. This seems to be typically handled by either sending along with
the new unit address labels and sufficient information for the customer
to schedule a pickup for the return unit, or by scheduling a call tag
to be picked up at the same time as the new unit is delivered - the
customer is told to have the unit ready for pickup when the new unit is
delivered.

Of course, in these cases, the vendor insists on having credit card
info, or some other means of billing the customer in case the return
unit is not received back promptly.

When it comes to ham radio, don't view it like something that will provide for you a service when you need it. View it as a tool that you can learn from and use it as best as you can under a particular circumstance.

If your other choice is an Iridium satelite telephone, that's probably a better choice is you want something there only to be use when needed/emergency and for nothing else. Is Iridium still around?

If you would like to carry a radio that will keep you company when in remote locations, HF is the best way to go, but it's useless if you don't understand propagation, band plans, antenna resonance, etc. Basically you must become a full-fledged ham radio operator/user before you can use an HF rig to get help if you need it. If you just want it when you really need it and have no intentions to be a real ham operator, go with something else (Inmarsat, a cell phone etc).

Check the timer setting in the set sub menu. Also, when you turn it on the
led in the on/off switch SHOULD NOT light up. If it does, then you have
activated the timer mode function.

When the AOR was retured to Martyn, I paid an additional amount of money above what I already paid so I could purchase the Alinco. Martyn had my credit card number and sent me the new unit before I he received the old one. I told him I appreciated that and was impressed right up until I received the Alinco in the mail which I have already explained was obviously previously used. The problem I have now is a matter of trust. I don't want to be out all that money totally if I send the radio back to him and I get nothing in return. And Martyn doesn't trust me because he knows I have a legitimate gripe and he is afraid I would not return the original one and still keep the one he would send. What a mess! I have never cheated anyone in my life and have been honest. I don't need to swindle someone out of something that belongs to them but on the same token I don't like being taken advantage of. Well, enough said. I don't need a jury here because what is done is done. I just want people to know what transpired. Also Martyn e-mailed me and said this was good publicity and advertising for him. Oh well.

Dean

Given that the Alinco sells for about $60 less, that's an approx.
$160 restocking charge (~29%). That's alot.

We used to tell users of the IC-735 to take apart the mic connection plug
and install a small jumper wire between Pin 6 and 7 inside the connector.
The RF floating around the vehicle get onto the mic shield and modulates the
audio at na RF rate. Grounding the mic shield (Pin 7) to the chassis
ground (Pin 6) generally solves the problem.

You returned a used unit, and possibly received a used unit in return. It cost you the agreed upon $100 to "upgrade" models. What's your gripe? Do you seriously expect a reseller to provide new units on a trial basis and eat the cost of depreciation when it's returned used? That is unreasonable.

Apparently without properly researching its ability to meet your needs, you ordered a unit, and you got what you ordered. After you realized YOUR mistake, the reseller went out of his way to allow you to exchange that unit for a different one, something he had no obligation to do. He has now offered to exchange the second unit you received, but you're demanding to receive the replacement unit first?! That is unreasonable.

He has, by your own account, gone out of his way to please you, yet you're publicly maligning him. That is unreasonable.

He should just tell you to F.O.

If you're looking primarily (that's the way it sounds) for emergency backpacking gear I doubt that ham radio will satisfy your needs. Check out satellite communications emergency equipment, GPS gear, and even cellular phones.

As far as the 5 watt unit being 'dependable' in an emergency - no, it couldn't be guaranteed. Band conditions (propagation) plays too big of a roll. Even a 100 watt transceiver can't be 'guaranteed' to provide reliable communications. Some days the bands are just 'dead', other days you can work the world with 1/2 watt.

It sounds like your looking for the wrong type of gear for your purpose.

Best of luck,

John

If you have lots of rf in the car, you need more grounding at the base of the antenna. It seems the magnets are not quite cutting it. Grounding the rig better won't help much I don't think. It's the lack of a good rf ground under the antenna that is the real culprit. This increases common mode currents on the feedline which are causing your rig problems. You might try grounding the antenna direct with straps to the body some way, and see if that helps. Using the mike pin mod as another noted might help, but I'm not familiar with that. The real problem is the antenna/ground. The icoms 730/735 etc are fairly prone to rf problems if there is rf in the shack/car, but they won't do this if the antenna is corrected. I'd rather fix the real problem first, then try others. MK

The AOR was deffective. You should not come to a conclusion without knowing the facts. I am not in the habbit of returning radios that work esspecially when I have to pay an additional $15.00 for shipping. I did my research very well. All indications weree that the AOR was a better radio. Have you ever bought anything that was deffective in your life? I do not need a jury. I am the one who got taken, I paid the money, I am not the seller. Maybe there will be a time when you are in a similar position and then the person that bent you over will tell you to as you put it F.O.

With 5 watts, a remote boonies location, and a backpack-style antenna for your Yaesu 817, you won't be able to contact anyone worth squat.

Get some kind of commercial cell phone device that can communicate with one of the overhead satellites that are stationary in the sky. (You'll probably be too far from the cell towers in your city.)

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* Manual
* Original Box

Specifications link:
http://www.yaesu.com/amateur/ft847tx.html

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1185.00 plus shipping from 97006

Thanks,
Rick

Dennis K has already answered the monitor question -- you hear your own
output. I'll emphasize that you should indeed use headphones when you
use the monitor. You may have to turn the volume up higher than usual.
I find it difficult to hear myself clearly on the monitor, when it's me
producing the sounds in the first place. Also, it's harder to notice
anything when the rig is adjusted properly. When it's not (e.g., way
too much compression), the distortion should be obvious.

The ALC will read out of range in FM mode, but it should be easy to get
full output power and ALC readings within range in the sideband modes.
Mine works just fine. I can't offer any guesses as to why yours
doesn't. Good luck with it.

... Rich

It's good to see we can all act like adults here.....

You stated you made your purchases on plastic. Correct? If you feel you have a claim, or didn't get what was a satisfactory deal, call the credit card company and have them fight it out for you. Make that 21.9 % APR work for you!!! It's pretty simple to do. Just call, send the item back, watch the tracking numbers and watch your account get credited. That way there's no newsgroups, no arguments, no public opinion.

Source record: 56059

Does anyone know if the antenna used on the new Kenwood TH-F6A uses a BCN connector??? The antenna is very long since it covers HF reception. Just wondering if other dualband antennas can be easily interchanged with this radio - for just VHF and UHF cant see using an antenna that looks nearly 1 1/2 feet or longer in length hanging out of someones pocket.

Louis,

I would try and see if APT Electronics is real or not. It is possible that the W4DHA call is not his and is a hoax from the get go. Try and see and good luck.

This Homebrew GROUNDED GRID amp is in excellant condition. It has a NEW tube in it and an Eimac chimney with a very QUIET blower. Jennings VAC variable for final plate tuning and a very HEAVY band switch and is bandswitched - 160 - 80 - 40 - & 20 meters. With just 18 watts drive on AM I have been using it to the legal limit on AM and it just loafs along! Unit comes with solid state power supply and is controlled with a LARGE VARIAC. THE AMP OPERATES ON 240 vac. It is all installed in a rack cabinet 38" tall and is on casters. THIS IS A PICK UP ITEM ONLY IN MADISON, WI !! Picture via e-mail is available. Any 100 watt ssb transceiver will drive this thing beyond the legal limit and not be pushing it!! $650 or trade for ???

According to the specifications on the Kenwood site (online), the antenna is BNC. However, there is an internal ferrite rod antenna for the frequency range of 10 kHz to 7 MHz. I would guess you can soft assign the BNC to the LF and low HF frequencies as well, but this "option" is not mentioned in the specifications. Frankly, the tri-band antenna (144/220/440) looks EXACTALLY like the antenna on my VX-5R from Yaesu. I wouldn't be surprised if the SAME specification/design house on the Pacific Rim designs and builds the new TH-F6 and the VX-5R. They look TOO much alike with many similar features. However, I'd rather have 220 MHz instead of 6-meters which is a push for any HT-based efficient antenna of any kind.

If you, in fact used a postal money order and conducted the transaction via the USPS, then you have a solid case for postal fraud. Report this incident to the postmaster immediately. The PO has records of who, in fact, is the renter of the PO Box, so that part should be easy. Postal inspectors are not to be taken lightly.

Just because your transaction does not involve a PO Box doesn't give you much protection. I got burnt twice this year trying to purchase a digital camera ($800) from two on-line companies. The first one charged my Visa account and went out of business - no camera. Visa got the money back for me but said if they had actually filed bankrupcy I would have to get in line with all the other creditors. The second one tried to charge my Visa account twice (which Visa caught) for the same camera and never sent the camera. Visa got that money back for me as well. I finally walked into a local Circuit City store and walked out with the camera but it cost me almost $200 more.

By the way, the best way to find out who you are dealing with on an on-line store is to go to the domain service and find out who owns the domain name. That got me the name, address, and telephone number in both cases.

The Post Office doesn't do JACK SHIT about people who burn you even if you did send a USPS Money Order.
I've been through it all even when it was know that the guy from Kentucky was well known to have ripped off a bunch of people.
Don't believe me? Buy a MO and then report that you were defrauded for it.
You'll be lucky if you can ever talk to someone who even speaks English!
To them, it's just another piece of paper for them to deal with. They would rather go to lunch than deal with that. You will just spend a lot of time filling out forms, calling them on the phone to see if there is any progress (after you get shuffled from 1 person to another) and THEN all you will get for an answer is that they will have to find your claim and get back to you which never happens. The FBI will take the case only if they rip-off comes to $25,000 or more. Now you have to find everyone who has been ripped off and see if your collective claims come to that total.
I only use PayPal or Billpoint unless the seller takes credit cards or will at least ship COD as my UPS driver lets me open the box in front of him to see if anything other than a cinder block was shipped to me.

If you think its hard to rent a PO box and still remain anonymous, you are extremely naive!! I stand behind my statement...get a phyical address and the check to make sure it its related to your party. Anything else, is Folly! (Im not saying there are not rare cases of different rules , but generally) Now lets get on to radios and all that stuff....I need to buy some 900-1200 dollar rigs wholesale...anybody out there in a hurry...Ill send the money first!! (if you can prove to my satisfaction that you are who and where you say!)
Cold Front in Odessa, texas has temps down in the mid 90's....gone to long sleeves!! hi hi Murray

Colgate W. Darden, III is an emeritus professor of physics at the University of South Carolina. I recognized the name because his father was governor of Virginia and later president of UVa.

I suggest taking another look at that callsign. I would also suggest writing a certified letter to APT Electronics and not depending on e-mail.

Source record: 56112

I use a 1000' long doublet fed with open wire and a differential tuner with balun at the 50-ohm port with excellent results. I don't think there is any "optimum" length other than the wire be something at or greater than 1/2 - wavelength at the lowest frequency you intend to operate. Of course, you can rely on "something" (house wiring or the power company or lossy ground) for the counterpoise. That's why I chose to put up the long doublet: it carries its own counterpoise and does not rely on some lossy media.

Hi
I need my Motorola MSF5000 UHF Analog repeater
Aligned and tuned. Also duplexer prepost filter tuned.
I can send the eprom out if you don't have the programmer.
But still would need the repeater aligned and tuned.
Will pay the going rate, cash of course. :)
Anyone in NJ that knows how to do it?
I will bring the Repeater to you so you don't have to travel.
Really hoping to hear from someone here in the group.
Home# 973-857-1195 NJ Rich

I'm looking for a manual/schematic for an RF Concepts 2-117 2-meter amplifier.

Will pay copy/postage costs.

If you need one in a hurry you might try using some CAT-5 computer networking cables. They have the rj45 connectors on them. Just be careful that you don't get the ones with the wires crossed over.

Lots of GOODIES for sale..........

1.Collins 651S-1 Receiver "Round Emblem" works and looks fine, it has
a
liitle bit of wear. Original Collins manual included
(its 3 inches thick!!!) also checked out by Wayne Spring
W6IRD...$900.00

2. Collins winged emblem 75S-3 Receiver, nice, comes with a weighted
spinner knob, copy of manual
checked out by Wayne Spring W6IRD......all original $575.00

3. Collins KWM-1 transceiver, Collins matching 516F-1 power supply,
Collins
516E-1 12 volt supply, and Collins 351D-1 mounting bracket for the
KWM-1,
Astastic hand microphone, and original manual $1900.00
checked out by Wayne Spring W6IRD

4. Collins 270G-2 external Speaker $325.00

5. Collins 270G-2 external Speaker $325.00

6. Collins 312A-1 external lighted speaker in "EXCELLENT CONDITION"
this one is "BEAUTIFUL"
NEW lumilight, NEW hood, & NEW light clips.....$1600.00

7. Collins 75A-3 in very nice condition, the outside case was
repainted with a slight darker krinkle black
color professionally done by a painter that does military equipment,
included accessories as follows:
Collins 8R-1 100 KHz crystal calibrator
Collins 148C-1 NBFM adaptor
Collins F-455-B-60 6.0 Kc A.M. filter
Collins F-455-B-31 3.1 Kc filter
Original Instruction Manual.....$1200.00

8. Dentron MT-3000A 3KW antenna tuner looks great $195.00

Thank You

There is (or was) a gentleman who adverstised rebuilding multi-section capacitors in the Antique Radio Classified magazine, and as I recall, his services were quite reasonable.
I would do a search for Frontier Electronics, I think the guy's name was Everett Hoard (or something like that).

I've done the replacement-caps-under-the-chassis thing before, just depends on how original you want to be.

All,

I'm thinking of buying a 'good condition' TS-130 from a local ham. Unlike lots of other HF rigs, there seems to be little info about this specific rig available on the internet. I would appreciate some opinions from TS-130 users/owners out there - good points, bad points, things to look out for, how it stacks up to today's low/mid range transcievers... Many thanks up front!

Hi there,
I have a problem with my PC and my R8500: guess what ? Noise !
The 'source' is the PC, of course.
Most of noise is heard on HF, no problem on V/UHF.

Where do I have to start from ? Well, I have already to something... but,
ok, I'll do it again !

Is this a 'mission impossible' ?

I'll be glad to read any comment.
Thanks and best 73's.
JK

Well, sylvan Butler, , , You are obviously ignorant of the technology
of soldering, and I am not going to try to teach you here, that's for
sure. If you have to ask the question "What in the world is an
intermatallic?" then you are displaying your ignorance in this
subject. So why are you giving out a lot of hokum here??

The "intermatallic" is the name of the interface between two metals
that are properly soldered. It is an :INTERMETALLIC junction formed
between the metal of the two wires being soldered and the solder
itself. It is a bond that forms, and is absolutely essential for a
good, reliable solder connection. It can be seen with a microscope
when the soldered connection is sectioned and stained.

I want to point out that the military gave up soldered connections for wire connections many years ago because of reliability problems when subjected to vibration. Everything is crimped now. Especially bad is when the solder wicks up under the insulation and greatly reduces the strength of the wire. I.E. it will break much easier. When I first started in aerospace manufacturing I argued that point with a DCAS inspector. He proved it to me with a simple test of bending similar wires back and forth until they broke. The soldered connection broke far sooner than the crimped connection.

Brian:

I have the TS-130 as a "backup" rig. It's a nice radio. If you are into CW at all, get the 500-Hz CW filter. Other than that, its a good radio and hard to beat with present prices/performance. However, do not go for the '120. It does not cover the WARC bands and has an instability problem with the finals. The TS-130 is a good radio!

> I hate to state the obvious, but computers and radios DO NOT go together!

It depends on the computer, the radio, and the installation. My monitor sits 6-inches from the IC756PRO and the tower case right below the monitor. Not a bit of interference in either direction. When I assembled the computer I spent a few extra bucks to get an Inwin case with good shielding and finger stock around all the I/O connectors. The tower is located about 100-feet from the shack with cables in PVC underground. No RFI problems.

I have forsale the following manuals. these are original manuals, prices include postage.

1@ heathkit uMatic memory keyer # sa-5010 $15

1@ heathkit uMatic memory keyer # sa-5010 $15

1@ heathkit hybrid phone patch #hd-15 $8

1@ heathkit Q-multiplier #qf-1 $6

1@ heathkit vacuum tube voltmeter #im-11 $8

1@ heathkit code oscillator #hd-1416 $8

1@ heathkit coaxial switch #hd-1234

1@ heathkit power supply #hwa-7-1 $8

1@ Allied Knight-kit signal tracer #83y135 $8

1@ Hammarlund receiver HQ-145 $18

1@ Drake transceiver TR-3 $12 (some pages have rough edges)

1@ Drake transmitter T-4XC $8 (this is a copy but 2 sided and bound with plastic covers)

last day folks....

Model Ha-202
Series no. 03608
13.6 VDC
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1261066721

Price is ONLY $25.95 w/ NO Reserve!!

This is a nice little 2 meter 144-148 Mhz Heathkit Power amp. I would guess the output is around 30-40Watts. It has a BNC connector for the input as well as the output. That will surely save time and power by not having to couple to UHF style connectors. Also there is a schematic and a service bulletin on the ad, which is interesting. Thanks for looking.

Try a filter at the AC line cord jack on the computer. Some computers in old days used to have filtering at the power supply. Most today do not.

Hi All,

I bought an ALINCA DJ-S4 hand-held 70cm radio recently. I noticed that the displayed frequency is about 10kHz higher than the actual freqnency. What I can do to fix it? Since I bought it from overseas, it is not easy to go back to the shop.

Thanks in advance

It's ok. Good audio transmit and receive. The drawback is it's a bit unstable with changing temperatures. This may or may not be a problem depending on how picky you are. The 130 can use the DFC-230 freq controller which is rock stable, and gives a few memories. All in all, quite usable these days, although for the same appx money, I prefer the Icom IC-730. The 730 was the "equal" competitor to the 130 back when they were made. For quite a few reasons, I prefer the IC-730. But I wouldn't let that scare you off the 130 if it's in good shape and the price is right. MK

1898. Kenwood V7A lines in display... any fix?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-06 11:02:21 UTC
From: jmtsr@usa.net
Message-ID: <332b7022.0108060302.48120e7d@posting.google.com>
Source record: 55999

I have a Kenwood V7A that has "lines" in the display (blank lines, partial numbers missing, sometimes they disapear and reapear.) This unit has never been mobile, etc, and in a conditioned environment. I have seen units on Ebay with this same problem, most worse. Is there a way to fix this problem easily? I have thought about sending my unit back to Kenwood (out of warranty of course) and getting this fixed. Also the radio sounds "off frequency" on certain repeaters that are not off on my Icom 2100. I have did a VFO and MR reset without any help. I have had this radio a few years, and have enjoyed many QSO's on it,have modified the mic with the transistor that allows quite crossband repeat, and that helped a ton. I have had to fix the "squeaky mic" problem once (The mic looks cool, but seems cheap made, have a friend that has two more of these radio's and had to fix his also a few times). I recently purchased a Icom IC-2800 that should be in next week to replace this radio for now, it has almost all the features of the V7A and got good reviews.

Brian,
The radio is a real good one.
I had used one in my club station back in VU2 for many years.
The abuse that it has taken over the years is enormous.

The finals have finally begun to give in. Hey, but it still is
putting out a signal at reduced power.

The rig is like an elephant. It does not have a lot of features
like the TS-440 that i own. But that is what one can expect
in a sub $300 rig.

If that is all you can get, go for it. Make sure it was owned by
a non-smoker.

good luck

What kind of monitor are you using? Have you tried disconnecting the keyboard, monitor, printer cables one at a time to see if the noise stops. I had a keyboard problem, soon as unplugged it, noise stopped. A good RF choke stopped it. Also, my LCD monitor caused terrible noise until I added a good station ground on my ham equipment.

Well, Dick,

it's been a long time since I worked in this area, but tell, me, , ,
what about airborn weapons? What about the Sidewinder missle? there
are connections there that HAVE to be soldered because of the design.
Also, while you are correct about wicking problems, wicking was not
allowed by the specification that I wrote in the 70's and 80's, just
for that reason. There are designs that do not allow crimping because
they are not as reliable as a properly soldered connection.

DCAS?? These are untrained inspectors. What can they possible know
that a trained design engineer doesn't know? I was a design and
production engineer for the Naval Weapons Center, China Lake, and we
had responsibility for all of the Navy's airborn weapons , and most of
the other services airborn weapons as well.

I have evaluated crimping, wire wrap, and other methods over the
years, and detirmined that none of these methods are more reliable
than solder, when done right.

Ron C.

Message-ID: <9kmf32$24af$1@madmax.keyway.net>
Source record: 56011

TS120's had some problems with power control /shutback
that was ironed out by the time the 130 came out.
It is said some early 130's slipped by as well. I had a
problem once or twice with the transmitter going off
on some other frequency, and this was traced to loose
screws on boards.

Pretty decent radio, RX does well at Field Day and NB
is outstanding for mobile operation. Output is usually
between 85-100 watts CW output. Won't allow general
coverage though. Don't touch the coil pack unless you
have a sweep generator.

I tried RTTY/Digital modes but I have Severe distortion
when going through the mic input. I am not sure if I have
a failure in the speech amp or if there is a clipper stage
always there regardless of processor selection. I will be
looking into this when I find time. The processor is an agc
type fixed at 20 db of compression but sounds good unless
you're on the road. Accessory, mic, vfo connections are
the same as the TS830 and I can drop my TS130 in place
of my 830 in front of my 30L-1 and VFO230 in seconds.

Can't say for sure cuz I'm "only just about to try" some digital
on my TS-120 but I do get much better reports and seem to get
thru QRM/N better on SSB if I turn the mic gain down to just
above midpoint - which suggests more causes over driving and
clipping. Could be the same with digital tones.

You are the one full of hokum, or maybe oakum...

I was giving you an opportunity to explain, and you failed.

> The "intermatallic" is the name of the interface between two metals

Actually that would be "intermEtallic".

> that are properly soldered. It is an :INTERMETALLIC junction formed
> between the metal of the two wires being soldered and the solder

Very good.

But that doesn't "make the connection" when splicing wires, now does
it.

Yup. Second reason: can crimp anywhere, easily, with very little
variance so the likelyhood of getting an acceptable connection
increases. A good crimp is far better than a mediocre solder joint.
And it is much easier and requires less skill to do a good crimp.

> Especially bad is
> when the solder wicks up under the insulation and greatly reduces the

Yup. Takes skill and practice to avoid that, and even then its
sometimes a problem if your concentration breaks.

The crimped connection has one point of rigidity. The soldered
connection will likely have a rigid area extending either way from
the splice. Good technique minimizes this.

> wires back and forth until they broke. The soldered connection broke
> far sooner than the crimped connection.

Of course, nothing should be flexing the wire at the actual splice.

This Homebrew GROUNDED GRID amp is in excellant condition. It has a NEW tube in it and an Eimac chimney with a very QUIET blower. Jennings VAC variable for final plate tuning and a very HEAVY band switch and is bandswitched - 160 - 80 - 40 - & 20 meters. With just 18 watts drive on AM I have been using it to the legal limit on AM and it just loafs along! Unit comes with solid state power supply and is controlled with a LARGE VARIAC. THE AMP OPERATES ON 240 vac. It is all installed in a rack cabinet 38" tall and is on casters. THIS IS A PICK UP ITEM ONLY IN MADISON, WI !! Picture via e-mail is available. Any 100 watt ssb transceiver will drive this thing beyond the legal limit and not be pushing it!! $650

FT: Computer gear for HF Rig / equipment

I have the following computer gear available for trade or sale on a "newer" HF rig and equipment. Specifically interested in the below units but open for other suggestions. I am workable, will put money into it if your gear is worth more.

* Kenwood TS-50, TS-840, TS-847, TS-900
* Yaesu FT-100, FT-840, FT-900, FT-847
* Icom IC-706 / 706 MKII / 706 MKII-G
* Alinco DX-70 / DX-77
* or ??

What I've got.

// Compaq Deskpro Server
400 MHZ, 128 MB Ram, CD-ROM, 8GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. Tower case.More ram is available.

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 5 GB SCSI-2 HD, 10/100 NIC, Adaptec Ultra Wide SCSI Card, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Desktop case

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 6 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. More ram is available. Desktop case.

// Compaq Deskpro Desktop - Small Form Factor
466MHZ, 128 MB Ram, 8 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Small form factor case, very small footprint.

// Sun SparcSERVER 10 - Unix
50-MHZ RISC processor, 96 MB Ram, 4 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Sun SparcSTATION 5 - Unix
70-MHZ RISC processor, 64 MB Ram, 2 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T

Ethernet, On-board Sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Hewlett Packard Rack Mount Network Hubs
4 available, 2 14 port and 2 15 port hubs. All are in excellent condition and recently removed from service. These are rack mount servers.

// Proxima LightBook LB20 DeskTop Projector
SVGA and RCA inputs, 200 ANSI lumens, Serial jack, Computer in jack, Monitor out jack, Video in jack, Audio in & out, TV output, Twin Lamp, True SVGA compatibility (800 x 600), International power supply, LightBoard drawing tool, Remote control, Lightweight (11 pounds - 13.5 x 9.25 x 5 inches), Custom padded case. This unit is in excellent condition and includes all the original equipment (cables + books).

If you see something you like, please let me know. I am open to trades or sales on any of the machines. Willing to trade multiple machines for the right gear. Response via Email is preferred.

Sales always welcome ...

Thank you!

The transverter should be linear. If you drive it with 5 watts you
should get around 5/8 the power out it would produce if driven with 8.
If you are using ssb or cw and not a continious carrier I doubt that you
would damage the transverter if driven ty 10 watts but it may become
nonlinear and generate spurs outside the desired frequency if driven too
hard.

I posted this on QRZ.com originally, but I think I might get a better response here.....

Hello,
I was wondering if I could get some feedback from the forum that might make my decision a little easier. I am thinking about purchasing a 2M handheld soon and, based on reviews and specs., right now I am leaning towards the Yeasu VX-150. But, the Alinco DJ-196 and Icom IC-T2H look like good units as well. I am concerned that the T2H won't work with an external power source, but that seems to be the only negative that this radio has. All three of these are going for less than $150, which is about the max I can spend.

First off, are there any other units or manufacturers that I should consider?

Second, of the radios listed (by me or by a responder) which do you recommend?

Also, in about a month I will be traveling to Milwaukee and plan to visit AES which sells the VX-150 for $149. Does anyone know of any place that might sell this unit cheap enough to negate the added cost of shipping and the other benifits of actually picking up the unit from the store?

Thanks in advanced for any information that is provided.

The T2H works fine; I have one, no real complaints, tho' I'd probably get the
vx-150 if I had it to do over -- many more memories, and it does operate, I
believe, off of a 12 volt supply when you don't need battery operation.

Yaesu FT-847 HF/VHF/UHF Transceiver

* FT-847 EarthStation in excellent condition
* Hand Mic
* InRad 2.1KHz SSB Filter
* Power Cable
* Manual
* Original Box

Specifications link:
http://www.yaesu.com/amateur/ft847tx.html

- Great for HF/VHF/UHF and cross band (satellite).
- No smoke, never mobile.
- Worked many satellites, and the International Space Station on several occasions.
- InRad filter provides excellent HF SSB receive.

$1095.00 plus shipping from 97006

Thanks,
Rick

Umm, the above line makes no sense, so I'm replying in the group. You can order a copy of the manual for most any old rig from http://www.manualman.com

(I recently got a new email address, and get only a few spams a week. You might want to try it; it beats being anonymous and mysterious.)

i just purchased a 95 ford explorer and am looking for suggestions on
how to mount the antenna (no hole drilling for now maybe next year) i
have a mag mount now and would like some advice on the best way to run
the cable into the truck
i am going to be using it for my kenwood th-g71 (no money for a mobile
radio right now so i am stuck with just my handheld)

please email a copy of all responses

thanks
Justin

I think I still have a copy of the sheet 8.5x11 that came shipped with the 530 . I'm unable to run a scan now (too much noise) but I'll look and if I find it , I'll scan and send it to a valid address .

I am looking for help with modifying a Motorola gm350 uhf mobile set.

the front cover is removable, so that you can use the other way up, what I would like to do, due to lack of space is extend the cable, only catch it is a flat 20 core plus cable, thoughts, can you match a of shelve cable of similar type, do Motorola sell a extended, can any one make one up.

any thoughts or ideas please to Andy

If you have a detachable faceplate, then check out a Motorola 2-Way radio dealer. They should have the extension cables available.

Thanks for the info. A ham that lives around the corner from me is going to see
if he can figure out how to switch it back to the factory specs of 5 watts in.
The previous owner changed it to 8 watts. Either way I'll be QRP on 6m! :)

Ones I have seen utilize regular flat cable and mating
connectors. These can be made from off the shelf stuff.
There is a 3rd party vendor that makes a kit, including
front cover and head mounting bracket but you have to
look around. I used to service some for a motorcycle
escort service.

Like new FT-990. Non smoker. This is the DC model,but Yaesu still sells the internal PS for around $300.00. Has had very little use and looks and works as new. No opptions. Comes with hand mic,DC cord,and original manual. Price is $750.00 + shipping from 96003. I can accept PayPal. Alot of radio for the money! Pics can be seen at http://community.webtv.net/KF6IKC/

Many people in a good many areas are unable to use a physical address and the only way they can get a mailing address is a PO Box. I live in a very rural area and the post office doesn't deliver here. Also, in some towns, if you live within a certain distance of the post office, you have to get a PO Box because they don't deliver.
There's nothing magic about a physical address either, someone can have mail delivered to a physical address-but its one of those packaging services that handles mail for a fee. I'd say the PO Box might even be safer than a physical address as there are loads of those MailboxesRUS type places that receive mail for people at a physical address. At the post offfice, you at least have to go in and sign a card and present ID to get a PO Box.

You're more likely to be ripped off by a person using a PO Box than
one using a street address. Yes there are exceptions to the rule. Pigs
fly but it isn't common nor do "many".

In article <9kp7dt$b9m$1@slb7.atl.mindspring.net>,
princeoftides@mindspring.com says...

Hi dr OM,

Thanks for reading this message. You are hereby friendly invited to visit my website at www.on4cay.com with lots and lots of info on ham (antennas, aprs, atv, meteosat,... in text, photo and video) and some other interests of me. PLEASE sign my guestbook as i had to start a new one after geocities discarded my webspace because i moved my home URL to the one above ... I would really appreciate to see lots of different countries in my guestbook as i am a teacher and i try to promote internet and hamradio to my students.

Thanks a lot and enjoy surfing !!

Actually, it worked fine. You just need to JOIN the fragments into a
single file. The Agent newsreader does this automatically.

I've had good luck with W&W. It's cheaper to repack though,
and you might be able to get lots of capacity that way too.

Right now I have brand new 1100 mah tab AA cells for $2.50 ea.

I should have PayPal up and running by next week.

I went for the VX-150. There is a LOT more to that little radio than the ads or writeups
talk about.
Like just for one example you can set it up to light the dial and keypad up on scan when it
stops on
a frequency (or memory) great for after dark usage. You can also turn OFF the TX/RX lamp if
you
want. Now that I have one I would buy another (as long as it don't develop the FT-8100
phantom TX
power problem that my mobile has) Bottom line grab the VX-150 but (just for your info)
avoid the
FT-8100!!! If you need more info write me at kb9tmp@my-deja.com and I'll try to help.

1963. FS:YAESU FT-847 (MINT)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-08 01:14:02 UTC
From: Paul <n8iez@home.com>
Message-ID: <un0c7.18271$K6.6628276@news2>
Source record: 55963

I have for sale a MINT Yaesu FT-847. This radio has the hand mic,manuals,power cord and original boxes. It is 1 year old and works 100%. This radio has no mod's and no options. It covers 160 meters to 70 CM.
It has 100 watts from 160 to 6 meters and 50 watts on 2& 70 cm's.
There is not one finger print on this radio.
If your looking for a new radio but don't want to pay the price of new...then this is the radio!

I will ship to your door for $1035.

I can send some pics on request

Thanks

Paul

Hello,
I have an OLD Toshiba T1600 (its a 286) Working last I checked,
I will verify before completing any trade as it will NOT be DOA.

I am looking for an older 2m radio, like a Yaesu 207r
or something like that. Let me know what ya wanna trade, I just
ask that it is working.

I am in Denver, CO

Thanks

Q:3.1.1 What power supply should I use with the IC-746?

S:3.2. Antennas

Q:3.2.1 What antenna should I use with the IC-746?
Q:3.2.2 What range can the automatic antenna tuning unit (ATU) handle?
Q:3.2.3 Are there any "tips" to using the ATU?

S:3.3. Microphones

Q:3.3.1 Can I use a Heil microphone with the IC-746?
Q:3.3.2 Do I need a pre-amp to use a Heil microphone?
Q:3.3.3 How do I adjust the IC-746 for a Heil headset?

S:3.4. Keyers

Q:3.4.1 Can I hook up my straight key to the front "Elec Key" Jack?
Q:3.4.2 Can I connect my own Electronic Keyer to the IC-746?
Q:3.4.3 How do I wire up my paddles for use with the internal keyer?

S:4. IF Filters

Q:4.1 How many optional IF filters can I install into the IC-746?
Q:4.2 What optional IF filters are available for the IC-746?
Q:4.3 Which optional IF filters should I buy?
Q:4.4 What is an IF filter's "bandwidth"?
Q:4.5 What is an IF filter's "shape factor"?
Q:4.6 Why do filter "bandwidth" or "shape factor" matter?
Q:4.7 What is considered to be a narrow filter?
Q:4.8 What are narrow IF filters used for?
Q:4.9 Can an IF filter be too narrow?
Q:4.10 What's the difference between IF filters from Inrad vs. Icom?
Q:4.11 Which IF should I put an optional filter into?
Q:4.12 What's different between IF filters for 9Mhz vs 455Khz?
Q:4.13 What are the 9Mhz IF filters best for?
Q:4.14 What are the 455Khz IF filters best for?
Q:4.15 How do I get the best results from TPBT?
Q:4.16 How do I configure the IC-746 to use an optional filter?
Q:4.17 How do I configure the IC-746 to use a non-Icom filter?
Q:4.18 How do I use a CW filter in SSB mode to receive PSK31?
Q:4.19 How do I use a CW filter in SSB mode to receive PSK31?
Q:4.20 Why is there only one optional 455Khz IF filter slot?
Q:4.21 Where do I install a 2nd Inrad 9Mhz IF filter?

S:5. Computer Control

Q:5.1 How do I wire the IC-746 up for computer control?
Q:5.2 What cables do I need?
Q:5.3 What are CT-17, OPC-478, OPC-662 all about?
Q:5.4 What is the control protocol for the IC-746?
Q:5.5 What is CI-V?
Q:5.6 What is the CI-V address of the IC-746?
Q:5.7 What computer software is available?
Q:5.8 Where can I get computer software and upgrades?

S:6. Problems and Clarifications

Q:6.1 What's that funny rattling noise I hear when I first power on the rig?
Q:6.2 Why doesn't the ALC meter work while adjusting the "mic gain"?
Q:6.3 Why can't I program any numbers into the memory names,
Q:6.4 Why isn't my output power up at 100 watts?
Q:6.5 The backlight in my LCD has stopped working. What's wrong?
Q:6.6 Is there some way to get the Icom-746 to generate DTMF tones?
Q:6.7 Why don't my "band edge beeps" match the US amateur bands?
Q:6.8 Can I transmit all the way out to the "band edge beeps"?
Q:6.9 Can I reprogram the "band edge beeps"?
Q:6.10 Do we know anything about the "band edge beeps"?
Q:6.11 How I reset back to factory default settings?

S:7. Misc...

Q:7.1 Are there different versions of the IC-746?
Q:7.2 What "mods" are there for the IC-746?
Q:7.3 Where can I find plugs for the ACC connectors?
Q:7.4 Does audio to pin 4 of ACC-1 trigger the VOX?
Q:7.5 Where can I get replacement power connectors?
Q:7.6 How does one improve the fidelity of a received signal?

S:1. ADMINISTRIVIA

Q:1.1. What is an FAQ?
Q:1.2. Where can I get a copy?
Q:1.3. Where do I send feedback?

Short Answer

FAQ stands for "Frequently Asked Questions". It tries
to cover common questions/problems/issues associated
with Icom's IC-746 HF/VHF amateur radio transceiver.

The master copy is kept at:

http://groups.yahoo.com/group/IC746/files/IC746-faq.txt

Mirrored copies (after a short delay) appear at:

http://www.skysdaughter.com/icom746-faq
http://206.230.2.41/IC746-faq.txt

Monthly announcements of revisions are posted to:

rec.radio.amateur.equipment

Additionally, you can post questions/comments
about the FAQ to the above newsgroup.

Long Answer

The format of this FAQ should become apparent right from
the start. Questions are grouped into related sections
and subsections, roughly in the form of an outline.
Questions start in column one with their composite
section number.

When possible/practical, there will be both a short
and long answer. The short answers will try to be
brief and to the point, typically about one paragraph.
While correct, quick, and immediate, it will often gloss
over subtleties and details. The long answers will cover
theory, alternatives, dissenting opinions, and other
supplemental material. We try not to unnecessarily
duplicate information between the answers (this one
is an example of that). Long answers may go on for
several pages.

The questions that are addressed here (as well as the
answers) come from several sources.

This FAQ was created by and is hosted by folks on a
Yahoo e-mail discussion group at:

http://groups.yahoo.com/group/IC746

Another (bbs style) on-line discussion group can be
found at:

http://vartel.com/icom746/icom746index.html

There are also the following newsgroups:

rec.radio.amateur.equipment
rec.radio.swap

Specific comments or clarifications can be sent directly
to the FAQ coordinator. "Content submissions" would be
greatly appreciated. However, general discussion/debate
over the answers is best done in a more public forum,
like one of those mentioned above.

S:2. GENERAL INFO

Q:2.1. Should I buy an IC-746?
Q:2.2. What are the IC-746's features?
Q:2.3. How does the IC-746 stand up to the ______ ?

Short Answer

Yes. Try it, you'll like it.

Long Answer

This FAQ is maintained by happy, loyal, and devoted
IC-746 owners. What do you really think we're going
to say?

For features, check out the IC-746 specifications
from brochures available at your local amateur radio
equipment store, on-line documents at various vendor
sites, or directly from Icom's WWW site at:

http://www.icomamerica.com/

Most of the 746's problems or faults show up either in
this FAQ (eventually) or in the archives at:

http://groups.yahoo.com/group/IC746

Probably the most objective, quantitative comparisons you
will find are the QST product reviews (freely available
to ARRL members):

http://www.arrl.org/members-only/prodrev/

Simpler, more limited, comparison charts are available
on the Amateur Electronic Supply WWW site at:

http://www.aesham.com/compare/comp_hf.html

User written reviews can be both more personal and
more detailed. They can also be more biased. You can
find plenty of them at:

http://www.eham.net/reviews

Q:2.4. How much is a used IC-746 worth?

Unlike used cars, there is no official "blue book"
for ham equipment. Only YOU can decide this.

Your best bet is to peruse the archives for

rec.radio.swap

over the past 6 months or so.

You might also check out one of the following sites

Electronic Boneyard Prices:
http://www.geocities.com/CapeCanaveral/Hall/8701/ham/boneyard.htm

E-Bay prices:
http://aade.com/hampedia/prices.htm

Virtual Hamfest - Recent Prices:
http://www.vhamfest.com/prices.html

Good luck.

Q:2.5. Is there a dedicated HF net for the IC-746?

Not yet. It's been proposed several times, but nothing
has ever congealed.

There two HF nets devoted to Icom rigs in general.
They meet Sundays, on or about 14.317 Mhz, at 1700Z
and 2200Z.

Q:2.6. Is there an electronic copy of the IC-746 operators manual?
Q:2.7. Is there an electronic copy of the IC-746 service manual?

No such copies currently exist, although they would
quickly become popular if they did. As of May 2001,
Icom had no plans for creating either. Additionally,
Icom considers any such external productions to be a
violation of their copyright. Ray (the product manager
at the 2001 Hamvention) was very firm on this.

Hard copies of both are available through any Icom
retailer as well as through the W7FG Vintage Manual
WWW site at:

http://www.w7fg.com/

S:3. Accessories

S:3.1. Power Supplies

Q:3.1.1 What power supply should I use with the IC-746?

Short Answer

Any good quality, communications grade, power supply
rated at least 20 amps or more (continuous duty) should
do just fine. However, most of us use larger supplies
(for a variety of reasons).

Popular supplies that are known to work (via testimonial):

Astron RS-35M 25/35A linear
Astron SS-30 25/30A switching
Astron SS-25 20/25A switching
MFJ 4125 22/25A switching (MightyLite)
MFJ 4225 22/25A switching
Samlex SEC-1223 23/25A switching
Kenwood PS-52 20/22A linear

Popular supplies to avoid (via testimonial):

Astron RS-20 - overloads too easily
Diamnond GZV-4000 - RF hash on 40/20m

Long Answer

This question typically arises for one of two reasons. Either someone wants to buy a new power supply, or they have an existing power supply that they want to use. In both cases, the issues are: load capacity, size, weight, electrical noise, mechanical noise, cost, features, and appearance. Buying a new supply gives you a lot of options; there are plenty of great supplies out there. With an existing supply, you have no control over these factors; you're simply looking for a "fit".

You'll want to consider the following factors.

Reviews

QST tested and reviewed many supplies in January and September, 2000. You'll find the results informative. ARRL members can access those and other reviews on-line at:

http://www.arrl.org/members-only/prodrev/pdf/pr0001.pdf

http://www.arrl.org/members-only/prodrev/pdf/pr0009.pdf

Transportability

The larger the capacity, the larger and heavier the supply. If size and weight are critical for you, consider a "switching" supply as they are usually less than half the size of a "linear" supply.

Electrical Noise

All supplies generate some electrical noise. Typically the noise from linear supplies will be in the form of AC hum while from switching supplies the noise will be RF hash. Communications grade power supplies of either type are designed to minimize the noise, and generally cause no problem. (i.e. this is not a good place to cut corners)

"Computer" power supplies that are pressed into radio service are particularly bad when it comes to electrical noise.

Usually, the harder you push a supply (the heavier the load), the worse the noise will become.

Mechanical Noise

Many supplies have cooling fans. Sometimes, the fans are loud enough to be a noise problem themselves. Fan noise is variable from supply to supply (even within the same manufacturer and model). Likewise, hearing tolerance varies from operator to operator. Thus, it's hard to tell in advance if a specific supply will have a problem. Time may yet tell.

We do know that fans are driven by load. The closer you operate to a supply's capacity, the more the fan runs.

Also, some of the transformers used in linear supplies will generate an audible hum. The transformer itself vibrates with the AC supply. Mass seems to help here. Usually (not always) the heavier the transformer, the less the hum.

Its pretty easy to put a noisy power supply under a table, behind a cabinet, or elsewhere to cut down on the noise level. Just be careful to allow proper air flow for cooling.

Features

Most of us consider current limiting, over voltage protection, and high temperature shutdown to be mandatory in a new supply.

Fuses or breakers are required for UL certification. Buy spare fuses right away; they never blow at a convenient time.

Meters are non-essential, they are luxury items. They make the supply bigger and more expensive. However, they can be very handy and even fun. Lets face it, most hams enjoy gadgets.

Adjustable output voltage is a useful feature, more useful than you might realize. Most new supplies have it (usually internally).

Load Capacity

The size, weight, and cost of a power supply all tend to increase with its load capacity. Those factors encourage us to get the smallest supply we can. There are also

factors that encourage larger supplies; such as noise, heat, accessories, etc...

The IC-746 specifications list a current drain at maximum transmit power of 20A at 13.8Vdc. Thus, the recommendation that your supply should handle 20 amps (or more) continuously.

It is possible to run the IC-746 with a smaller supply, but extreme caution and discipline are required. Very few, if any, of us recommend it for normal operation.

For example, the 20 amp maximum in the IC-746 specifications is full key-down at full power. You could just lower your RF power to help match your load to the supply. You could even run the IC-746 QRP, drawing as little as 3-4 amps on transmit.

Another factor is operating mode. Some of us have measured full-key loads as high as 21-22 amps. Normal SSB transmit at full power draws 6-15 amps. But FM, digital, and CW will generally pull 18-20 amps at full power.

Continuous vs. Intermittent Load

There are issues concerning a supply's "intermittent", "peak", or "surge" capacity. A supply might be rated for 16 amps continuous and 20 amps peak. Normally, the IC-746 runs at about 2-3 amps for receive and only hits the 20 amp maximum during transmission. Thinking of transmitting as "peak" or "intermittent" activity can lead one to think that such a supply is acceptable. It might even be. However, a problem develops when we try to define what peak or intermittent activity is.

Everyone would agree that transmitting for 3 minutes at 20 amps till the repeater time-out cuts you off is not a peak. How short a time constitutes a peak and at what duty cycle? Without some sort of specification or standard, "peak" and "intermittent" could mean just about anything. Most of us feel more comfortable with a "better safe than sorry" approach.

This dual rating system for power supplies is a great source of confusion. Specifically, you could buy a power supply rated for 20A and have it fail under full load. The Astron RS-20 and Pyramid PS-21 are examples of such supplies. While both are excellent supplies, they just can't keep up with an IC-746 under full power.

The exact definition of intermittent, peak, or surge as used by the power supply manufacturers has not

been established.

(Some of us are going to try to talk to the
supply manufacturers about this to get more
details)

To quote a tech from Samlex:

Maximum rating is surge current requirement for
starting reactive loads or short term dynamic
loading and is limited to a few seconds.

This supply is not designed for pulsing loads.

Currents beyond the maximum rating will force the
unit into current limit and the output voltage
will drop and it will no longer be regulated.

Meanwhile, MFJ said (of the MFJ-4322):

Our units will shut down at surge. At 25 amps
surge, the power supply will shut down at about
ten seconds.

So while it is theoretically possible, most people do
not use supplies rated less than 20 amps continuous.
In fact, most use substantially bigger supplies.

Bigger Supplies

Why use a bigger supply? There are several reasons.

As noted earlier, the closer you operate a supply to
its rated capacity, the greater the electrical noise,
mechanical noise, heat, etc...

Strain leads to wear-and-tear. So it can be argued
that a bigger supply should last longer.

The IC-746 is rated at 20 amps max, but loads as high as
21-22 amps have been measured. "Your mileage may vary"
definitely applies.

The continuous rating is generally based upon an
ambient air temperature of 20 C. The rating degrades
as the temperature rises, by how much, we're not sure.
Filed Day conditions will be stressful to your supply.

13.8 V times 20 A yields 276 watts. There's a tendency
for some supplies to drop voltage a little when they
get hot or overloaded. There's also a tendency for
some radios to increase their current pull when the
voltage drops. At 12 Vdc, that same 276 watts would
imply 23 amps. You push the supply capacity, which
drops voltage a little, which drives the rig current

up, which pushes the supply further ... then BANG.
You blow a fuse. (AK6R has actually seen this effect
with his 756pro)

There are plenty of other devices that need DC power.
You need to account for them as well.

Other and future rigs may have greater power demands
(like the 756pro). Extra capacity now may avoid the
need to upgrade your supply in the future.

You might well spend most of your time in a low power
situation (SSB QRP) and get by with less than 5A.
But, in an emergency, you and your gear may be called
upon to operate in different modes, at higher power,
and with heavier duty cycles. Planning ahead for the
worst case usage helps prevent an untimely failure at
just the wrong time.

Conclusion

So, you'll find most of us with power supplies ranging
from 20 to 30 amps continuous; and some with even
bigger supplies.

S:3.2. Antennas

Q:3.2.1 What antenna should I use with the IC-746?

Short Answer

Any antenna you want.

Long Answer

Seriously. ANY antenna will work with the IC-746,
with the proper interfacing. People have even made
contacts using dummy loads.

Antennas are probably the most uniquely individualistic
aspect of any ham station. Antenna selection is a BIG
topic; much too big to deal with in an FAQ (at least
for this one).

The IC-746 has 50 ohm, unbalanced, coaxial RF outputs.
With the automatic ATU capable of handling SWR
mismatches of up to 3:1, you have a wide variety of
choices available to you.

There are many excellent books on the topic; the ARRL
has a couple dozen of them. A good one to start with is:

The ARRL Antenna Book

At over 800 pages (and over 1,000 antennas), you're
sure to find SOMETHING that fits your style and budget.

For more information, try hanging out on one of over
50 e-mail groups on the topic at

http://groups.yahoo.com

or visit one of the hundreds of antenna oriented WWW
sites indexed by AC6V:

http://www.ac6v.com/
http://www.ac6v.com/antprojects.htm

or follow along with the discussions on the newsgroup:

rec.radio.amateur.antenna

or visit the on-line antenna magazine:

http://www.antennex.com/

or, you could just put up a trusty old dipole.

Just be sure you do use an antenna. The IC-746 does not
like to transmit into an open load (no connected antenna).
It will put an undue (and possibly fatal) strain on your
output transistors.

Q:3.2.2 What range can the automatic antenna tuning unit (ATU) handle?

Officially, the automatic ATU in the IC-746 can handle SWR
mismatches of up to 3:1. In practice, many people get
even wider ranges.

Some have pointed out that, even though an internal tuner
may tune a particular antenna configuration, if there
is a high SWR, you may end up burning out the tuner.
(We do not yet have a confirmed case of this happening
with the IC-746. If someone does, please speak up.)

Q:3.2.3 Are there any "tips" to using the ATU?

Yes. The ATU appears to pay attention to the reflected
power, not the SWR. [Note: we'd love someone to
analyze the schematics to confirm or deny this.]
This is evidenced by two effects.

When starting from a close match at QRP power levels,
the auto ATU doesn't always home in on the best match.
Increasing the power level and tuning again often

improves the match, which the ATU then retains when returning to QRP power.

The converse situation can also cause trouble. When starting from a poor match at full power, the auto ATU sometimes can't find a match at all. In this case, tuning at lower power allows the ATU to get a match, which the ATU then retains when returning to high power.

If one end of a band consistently gives you trouble while the other end tunes easily, then you may still be able to coax the ATU into matching the antenna. Start in the portion of the band where the ATU works and tune there. Then, move your way across the band in increments (maybe 25Khz at a time), tuning as you go until you reach the desired portion.

S:3.3. Microphones

Q:3.3.1 Can I use a Heil microphone with the IC-746?
Q:3.3.2 Do I need a pre-amp to use a Heil microphone?
Q:3.3.3 How do I adjust the IC-746 for a Heil headset?

In theory, the IC-746 has enough microphone gain to use an unaided Heil microphone. Heil even has a newsletter that discusses the topic, see:

http://www.heilsound.com/newslettermay00.htm

In short, you use moderate compression along with moderate mic gain for the best results.

However, the above procedure just doesn't seem to work for everyone. For those that still have gain problems, adding the Heil HMP microphone pre-amp should work just fine.

S:3.4. Keyers

Q:3.4.1 Can I hook up my straight key to the front "Elec Key" Jack?
Q:3.4.2 Can I connect my own Electronic Keyer to the IC-746?
Q:3.4.3 How do I wire up my paddles for use with the internal keyer?

Short Answer

Yes, virtually any type of key/keyer can be connected to the IC-746 via either the front "Elec Key" jack

or the back key jack. However, the two jacks require different wiring, and only the front jack will give access to the internal electronic keyer.

The front "Elec Key" jack on the radio accepts a 3-conductor 1/4 inch stereo phone plug and can be wired for use with anything. The back "key" jack accepts a 2-conductor 1/4 inch mono phone plug and can be wired for use with either a straight key or an external keyer, but not for the internal keyer.

See page 68 in the operator's manual for wiring details and pages 23 and 27 for the programming details.

Long Answer

FOR A STRAIGHT KEY OR EXTERNAL KEYER:

For a diagram on how to wire the stereo plug see page 68 of the operating manual. For a straight Key or keyer, wire only the tip and the Sleeve, and leave the ring as No-Connect.

tip ring sleeve
oooo ====]]]]]]} ---------> 2 cond wire to key/keyer
(+) (nc) (-)

The back "key" jack is a mono 1/4 inch phone plug and is easy to wire.

When using the front Jack, You also have to set the radio to recognize that the ring is not used. To set the radio, You do have to go to the "key", "set" menu and tell it you will be using a straight key. See Page 23 and page 27 in the operation manual. While in CW mode press KEY(F4), then press SET(F5), Press the down arrow(F2) until you reach the sixth menu (KEYER TYPE), Use the Main tuning knob to set the type of keyer to "Straight Key".

TO USE THE BUILT IN ELECTRONIC KEYER WITH PADDLES:

Wire the 3cond Stereo plug (use the front jack) so that the "Dit" is the tip, the "Dash" is the ring and the sleeve is common(-). (You can also wire up a "bug" this way (without electronic keyer))

oooo ====]]]]]]} ---------> 3 cond wire to paddles
(dit) (dash) (-)

To set the radio to use the internal electronic keyer, You do have to go to the "key", "set" menu and tell it you will be using paddles. See Page 23 and page 27 in the operation manual. While in CW mode press

KEY(F4), then press SET(F5), Press the down arrow(F2)
until you reach the sixth menu (KEYER TYPE), Use the
Main tuning knob to set the type of keyer to "Elec Key".
(or "bug Key" to use the bug without electronic keyer)

S:4. IF Filters

Q:4.1 How many optional IF filters can I install into the IC-746?

There are two (2) slots for optional filters in the 9Mhz IF,
and one (1) slot for an optional filter in the 455Khz IF.

Q:4.2 What optional IF filters are available for the IC-746?

Available filters for the 9Mhz IF include:

Icom FL-101 250 hz (CW narrow)
Icom FL-232 350 hz (RTTY, CW narrow)
Icom FL-100 500 hz (CW/RTTY narrow)
Icom FL-223 1.900 Khz (SSB narrow)
Icom FL-103 2.800 Khz (SSB wide)
Inrad 121 250 hz (CW)
Inrad 111 400 hz (CW)
Inrad 320 1.800 Khz (SSB)
Inrad 110 2.100 Khz (SSB)
Inrad 123 2.800 Khz (SSB wide)

Available filters for the 455Khz IF include:

Icom FL-53A 250 hz (CW narrow)
Icom FL-52A 500 hz (CW/RTTY narrow)
Icom FL-222 1.800 Khz (SSB narrow)
Icom FL-96 2.800 Khz (SSB wide)
Icom FL-257 3.300 Khz (SSB wide)
Inrad 306 125 hz (CW) (might not fit)
Inrad 122 250 hz (CW)
Inrad 116 400 hz (CW)
Inrad 322 1.800 Khz (SSB)
Inrad 314 2.100 Khz (SSB)
Inrad 109 2.400 Khz (SSB)
Inrad 124 2.800 Khz (SSB wide)

(The Inrad 306 is listed on their WWW site,
and is electrically compatible, but might
not fit in the available socket.)

While not an optional filter, W2ENY has a kit to modify
the IC-746 by replacing either the stock 9Khz or 15Khz

wide internal filters with a 6Khz wide filter. See the
"mod" question of the FAQ for more details.

Q:4.3 Which optional IF filters should I buy?

Better to ask, "Why would I even need filters?".

Quite possibly, you'll won't need any optional
filters. Use the Twin PassBand Tuning (TPBT) to
dynamically adjust your IF bandwidth first. Properly
used, TPBT can give you nearly any bandwidth you want.
You may decide that you don't need any anything else.

There are over a thousand (1,429) possible combinations
of optional filters. Most of them will make sense
(i.e. be useful) to someone, somewhere. As it is a
matter of style and situation, ultimately, the choice
will be up to you.

We've broken up this issue into several questions, each
targeting a more specific issue or problem. Short of
writing a book, it is the only hope of providing any
useful answers.

Q:4.4 What is an IF filter's "bandwidth"?
Q:4.5 What is an IF filter's "shape factor"?

Also called "passband", a filter's bandwidth is a
measure of how wide a signal will pass thru the filter.
For IF filters, this is typically measured as the span
between the filter's -6db points. (Some folks measure
bandwidth at the -3db points. Pay careful attention
to the specifications when comparing filters)

"Shape factor" tries to represent steepness of the
filter's attenuation curve. Typically defined as
the ratio of the -60db passband to the -6db passband
(bandwidth). The perfect shape factor of 1.0 is
unobtainable. Shape factors of 2.0 or less are
considered excellent.

This is one of those situations where a picture is worth
a thousand words. A good look at the spectral response
curve of a typical filter will make these terms clearer.

Inrad publishes basic performance curves of most of
their filters on-line. An example of a typical curve is:

http://www.qth.com/INRAD/graphs/116.gif

Several companies have good on-line treatments describing basic filter characteristics, complete with diagrams.

Corning Frequency Control has a very concise page styled in a glossary format at:

http://www.ofc.com/filters/definitions.html

Vectron International also has a nice on-line treatment of filter characteristics at:

http://www.vectron.com/products/xtal/filter.htm#definition

The folks at Piezo Technology Inc. describe filter characteristics with attenuation curves.

http://www.piezotech.com/filter/gen_desc.html#att

Q:4.6 Why do filter "bandwidth" or "shape factor" matter?

Narrower bandwidths reject more noise and improve sensitivity. Wider bandwidths provide better fidelity.

Narrower bandwidths also reduce the number of simultaneous signals the rig can "hear". This reduces the AGC pumping action caused by nearby signals, particularly important for CW and digital modes.

Smaller (tighter) shape factors reject more noise and improve selectivity. Larger (wider) shape factors generate fewer problems/complaints with fidelity or ringing.

Q:4.7 What is considered to be a narrow filter?

In the context of (and for the purposes of) this FAQ, a narrow filter is any filter that has a smaller bandwidth than the stock 2.4Khz wide filters. However, most texts will describe a filter as being narrow if its bandwidth is smaller than that of the desired signal.

Q:4.8 What are narrow IF filters used for?

Usually, narrow filters are used to reject unwanted signals or noise. The narrower the bandwidth, the less noise there will be and the better the sensitivity. You can lose part of the desired signal in the process, but that may be preferable to the interference you're trying to reject.

Q:4.9 Can an IF filter be too narrow?

Yes, an IF filter can be too narrow, but sometimes, that
can actually work to your advantage. We'll describe
only a few specific situations as examples.

When the IF filter's bandwidth is less than the bandwidth
of the desired signal, then part of the signal will be
rejected. This degrades the fidelity (quality) of the
received signal. In phone modes, the fidelity loss is
often mistakenly perceived or described by operators as
"distortion".

Fortunately, the inherent information redundancy of
human speech allows it to be readable even when an overly
narrow filter has rejected part of the desired signal.
That's where our advantage comes from.

One form of interference is when a nearby signal
overlaps your desired signal; as in an overcrowded band.
Rejecting the interfering signal necessarily rejects
part of the desired signal as well. Thus, the filter
is too narrow to allow all of the desired signal
to come through, but it is narrow enough to reject
the interference. While the result is "distorted" in
comparison to a clean signal, it is still more readable
than if you left the interference there.

Another example would involve CW or PSK31. The more
narrow the filter is, the less the interference and
noise. In these modes, it's almost impossible for a
filter to be narrow enough to actually reject part of
the desired signal, as in the previous phone example.
Instead, when a CW/PSK31 filter gets too narrow,
you start to experience the auditory equivalent of
tunnel vision. This can make it difficult to scan
around for signals.

One of the handy things about TPBT is that you can
narrow your effective IF filtering bandwidth at any time.

Q:4.10 What's the difference between IF filters from Inrad vs. Icom?

Inrad filters tend to have a superior shape factor to
Icom's (smaller numbers are better) as well as deeper
stopbands. They also tend to be cheaper.

When dealing with adjacent channel interference, the
filter shape (depth and slope of the attenuation curve)
is generally the prime factor. Inrad filters tend to
outperform the Icom filters for this application.

For example. The stock Icom filter in the 455Khz IF has a -6db bandwidth of 2.4Khz and a -60db bandwidth of about 5Khz. That gives it a shape factor of about 2.1 The comparable filter from Inrad has a shape factor of 1.6, a -6db bandwidth of 2.4Khz and a -60db bandwidth of 3.8Khz.

This all means that the Inrad filter has a steeper attenuation curve, resulting in better extraneous signal rejection and improved selectivity.

The Inrad filters tend to have greater ultimate attenuation than the Icom counterparts. Thus, Inrad filters tend to do a better job of adjacent signal rejection than Icom's filters.

However, while the 455Khz Inrad filters are drop-in replacements for the Icom counterparts, the 9Mhz filters are not. They need a short piece of coax and a connector to wired up to the filter first. The adapting connector plugs into the filter slot, thus alleviating any mods to the radio itself. Reported assembly times range from 1-4 hours per filter, depending upon the skill and care of the installer.

Q:4.11 Which IF should I put an optional filter into?

Realistically, the performance differences between using filters in the 9Mhz IF vs the 455Khz IF are fairly small and will probably go unnoticed in normal operation.

Most people make this decision based upon slot availability and filter cost.

Q:4.12 What's different between IF filters for 9Mhz vs 455Khz?

The 455Khz IF filters tend to have superior performance characteristics while the 9Mhz IF filters tend to be less expensive.

Q:4.13 What are the 9Mhz IF filters best for?

When dealing with interference from nearby signals, the sooner you reject the unwanted signals from your RF chain, the better. So a single narrow IF filter in a 9Mhz slot may outperform a single filter in a 455Khz slot.

Q:4.14 What are the 455Khz IF filters best for?

On the other hand, filters in the 455Khz IF seem to do
a better job of eliminating background noise, possibly
due to their superior performance characteristics.

Q:4.15 How do I get the best results from TPBT?

TPBT works best when the 9Mhz and 455Khz IF filters have
closely matching bandwidths. Non-matching bandwidths
will still work, but are less intuitive, which can
cause confusion.

There are several techniques to using TPBT. The one
described below has the virtue of simplicity.

Starting with both filters in their center, detented,
position (widest effective bandwidth), tune in your
desired signal as accurately as possible.

Grasping both IF shift knobs simultaneously, adjust for
the best sound. If you have a nearby, interfering
signal, then you'll probably have the best results
shifting your bandpass away from it.

Now, adjust just the 455Khz IF shift (the inner knob)
in the opposite direction for the best sound.

Q:4.16 How do I configure the IC-746 to use an optional filter?

After you've installed a filter, you need to tell
the radio about it. Using the SET menu, tell the radio
which filter you've installed (by Icom part number)
and which slot it is in. Then, hold in the FILTER
button for two seconds to bring up the filter selector.
Cycle through your available filters by mode and by
wide/narrow until everything is set up the way you want.

See the operator's manual for details.

Q:4.17 How do I configure the IC-746 to use a non-Icom filter?
Q:4.18 How do I use a CW filter in SSB mode to receive PSK31?

You have to lie to the rig.

All of the IC-746 filter settings are on the basis of
Icom part numbers. (This is supposed to make things
easier for new operators.) Just tell the rig you've
installed the Icom crystal that most closely matches
the one you're actually using.

Lying to the rig does have a side effect.

The 746 cannot actually shift the IF filters' passbands.
Instead, the 746 shifts the LO frequencies of the 2nd
and 3rd IF stages to shift the signal back or forth,
aligning the edge of the desired signal with the computed
edge of the filter's passband.

Small lies generate small effects, like when you
tell the rig that a 2.1Khz wide filter is actually
1.9Khz wide, yielding a 100hz offset in the control.
Larger lies generate larger effects, like when you tell
the rig that a 400hz filter is actually 2.4 Khz wide,
yielding a 1,000hz offset in the PBT control.

Q:4.19 How do I use a CW filter in SSB mode to receive PSK31?

Icom took their ease of use one step further, and
programmed the rig to prevent the use of a CW filter
while in SSB mode. They didn't know about PSK31 at
that time. So again, you lie to the rig during setup,
telling it that the crystal is wider so that the rig
will allow you to select it for SSB use.

Q:4.20 Why is there only one optional 455Khz IF filter slot?

Nobody knows for sure, but the most popular speculation
is that it made the radio cheaper.

Q:4.21 Where do I install a 2nd Inrad 9Mhz IF filter?

According to K7ZL, the place Inrad tells you to put
the filter is way over on one side in a little opening
next to a fan, and that works fine. But he has found a
second location. When you have the rig opened, if you
go on a line from the 9 Mhz filters, then to the 455
Khz filters, and keep on going towards the front panel,
you will see a square metal plate on the circuit board.
He mounted his second filter on top of the metal plate,
on its side, and it seems to work fine.

S:5. Computer Control

Q:5.1 How do I wire the IC-746 up for computer control?
Q:5.2 What cables do I need?
Q:5.3 What are CT-17, OPC-478, OPC-662 all about?

The IC-746 is computer controllable through a serial interface, but it is not RS-232. This is both good and bad. Bad, because you can't just plug it straight into your computer (wrong voltages, etc...). Good, because you can control four separate rigs with the same serial line. Therefore, to connect the IC-746 to a computer requires some interfacing. Icom made three: the CT-17, OPC-478, and OPC-662.

The CT-17 is the full boat. Versatile, it will allow 4 rigs to be controlled by a single RS-232 serial line. It's also the most expensive option and requires external power.

If all you want to do is connect up a single rig, then Icom's WWW site lists the OPC-662 remote PC control cable as the official part. If you can find it, then great. Most people can't. Instead, many hams have successfully used the OPC-478 PC cloning cable. It's less than half the cost of the CT-17. However, it is very short (1 ft ?) and will require a 1/8 inch stereo to mono plug adapter for use with the IC-746.

When you buy the RS-746 remote control software from ICOM, it comes with a single rig cable (OPC-662 or OPC-478?).

W2ENY sells a complete CT-17 clone and a single rig cable. They're both more complete package than Icom's, coming with cables and software resources on a CD-ROM. They're also cheaper. You can find out more at:

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

There's really not that much circuitry in one of these interface cables, and many have homebrewed them for as little as $10. Supposedly, the November 2000 issue of QST has a suitable design (with feedback in the January 2001 issue). On-line circuit diagrams based on the QST article appear at:

http://www.ambersoft.com/Amateur_Radio/Icom_Interface.jpg

and

http://www.qsl.net/civ_commander/interface.jpg

KD6UU posted detailed schematics and instructions on eham.net:

http://www.eham.net/articles/1588

and then wrote an excellent updated follow-up article at:

http://www.qsl.net/kd6uu/icomci.html

The actual design of the interface circuit is subject to debate (as the above link will make clear). Several alternative designs (along with a wealth of related information) are available from DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

Q:5.4 What is the control protocol for the IC-746?
Q:5.5 What is CI-V?

CI-V is the control protocol used by ICOM for remote PC control of their equipment. The basics of the protocol are documented in the manual. However, most people will prefer the documentation available from DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

or the documentation that comes shipped with W2ENY's control cables:

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

W7FG Vintage Manuals has listings in their catalog for both the CT-17 Level Converter and for the CI-V Communications Interface on their WWW site at:

http://www.w7fg.com/

Q:5.6 What is the CI-V address of the IC-746?

The CI-V address of the 746 is $56 (hexadecimal).

Q:5.7 What computer software is available?
Q:5.8 Where can I get computer software and upgrades?

There are several choices (compromises?) available. On one end of the spectrum, we have programs that replicate nearly all of the IC-746 controls on the computer. On the other end, there are programs that do computer assisted contact and contest logging.

There is a fairly comprehensive listing of CI-V compatible software on DF4OR's WWW site at:

http://www.plicht.de/ekki/civ/

We'll mention some of the available software options
below. User reviews for some of the below software
can be found at:

http://www.eham.net/reviews/

and

http://www.qrz.com/search.pl?topic=reviews

** Icom RS-746 software

Icom SELLS a program called RS-746; buying it
is certainly the path of least resistance. It is
available through the usual retail channels. It comes
complete with both software and the necessary cabling
(OPC-662?). Many people describe it as a thing
of beauty. (Of course, beauty only runs skin deep.)

A description of the software can be found at:

http://www.icomamerica.com/amateur/hf/746soft.html

To quote ICOM's own support FAQ (circa May 2001):

Q: Where can I download the ICOM PC programming (or
cloning) software?

A: The ICOM programming software is not freeware,
and is not available for download on our Web site,
or anywhere else on the Internet. It must be
purchased either from an authorized Icom America
dealer, or direct from ICOM. RT Systems also
develops programming software for ICOM radios.

Ray (the product manager at the 2001 Hamvention) was
very firm on this issue. They take a dim view of the
pirated copies available on the internet.

Last word we know of (January 2001), Icom had no plans
to update/fix/enhance the RS-746 software.

** RT Systems software

OK, so Icom refers us to RT Systems at:

http://www.rtsars.com/

However, as of May 2001, RT Systems does not have a 746
control program. They told N8AVX (in February 2001)
that they had no plans to do so either.

** Kingsmith Software

Kingsmith Software is developing control software for
the IC-746 (RATS IC-746), but as of May 2001, it wasn't
available yet. More information is available at their

WWW site at:

http://www.kingsmith-software.com/

** W2ENY

W2ENY ships a CD-ROM with lots of software and
documentation along with the PC to rig interface cables
he sells. Many of the packages listed here are also
on his disk.

http://www.geocities.com/w2eny/civ/

http://www.geocities.com/w2eny/icom_cable/

** RadioComm

Arachnophilia has several programs: RadioComm,
IcomControl, and EasyTuner (among others). Check out
the download section on their WWW site is at:

http://www.arachnoid.com/

** YP Log

Tony Field (VE6YP) makes a radio control and logging
program called YPLOG. His WWW site is at:

http://www.nucleus.com/~field/

** TRX Manager

Some say that TRX Manager by F6DEX has more features
than the original radios. More info can be found at:

http://www.trx-manager.com/

http://www.hosenose.com/trx-manager/

** XMLOG

The freeware logging software produced by W1ECT also
talks directly to the IC-746. You can learn more at
either the WWW site:

http://www.xmlog.com

or at the yahoo e-mail group site at:

http://groups.yahoo.com/group/xmlog

** TR Log

One of TR-Log's claims to fame is that it will run on
just about any PC. More details at:

http://www.qth.com/tr/

** CI-V Commander

A package that integrates well with the DxLab software
suite. More details at:

http://www.qsl.net/civ_commander/

** IRC

One of IRC's claim to fame is selectable skins.
You get to choose what you want your radio to look
like, be it IC-746, IC-706, or even a 007 spy watch.
More details at:

http://n9zle.tripod.com/

** YPlog

YPlog can control 4 rigs at a time and supports logging
and contesting.

http://www.nucleus.com/~field/

** ScanCat

Very extensive scanning support, including automatic
digital recording to your harddisk,

http://www.scancat.com/

S:6. Problems and Clarifications

Q:6.1 What's that funny rattling noise I hear when I first power on the rig?

Often, its the antenna tuning unit. The relays make
audible clicking/rattling sounds.

Q:6.2 Why doesn't the ALC meter work while adjusting the "mic gain"?

Despite what the manual says, the ALC meter only works
for SSB; not FM, CW, or RTTY. Nobody knows what (if
anything) the ALC reading means on the other modes.

Q:6.3 Why can't I program any numbers into the memory names,
the CW memory keyer, etc...?

Use the keypad to enter numbers. The dial only does
letters and punctuation.

Q:6.4 Why isn't my output power up at 100 watts?

One possibility is your DC supply voltage. The IC-746 really wants a full 13.8 Vdc. Check the actual voltage your rig is receiving. You may need to adjust the voltage setting on your power supply.

If your rig isn't getting the voltage you think it should, then check for voltage drops along the power cord and across joints and connectors. It's possible to lose as much as a half volt per connection. Solder joints and use high quality connectors where possible.

12 AWG wiring is the minimum, but 10 AWG is better.

Q:6.5 The backlight in my LCD has stopped working. What's wrong?

Short Answer

Its probably one of the display driver transistors on the S-Logic board behind the display. It will have to be replaced.

Long Answer

Unfortunately, this has become a problem for some 746's. It's not the actual 'lamp' itself, but one of the driver transistors. The lamp is fluorescent, and will probably never wear out. Even if it did, the lamp isn't available as a separate part; it's part of an assembly you need to get from Icom.

There is a DC/AC converter driving the "lamp". Check the S-Logic board for transistors Q301, Q302, Q303, and Q304. Q302 is the most likely culprit as it is the voltage regulator for the dimmer function. If you have a DC voltage on the collector which is variable by the dimmer function on the radio, then this transistor is OK. Q303 and Q304 are the next most likely candidates. These 2 transistors are in push-pull configuration to drive the X-former (base is 180deg phase shift by the X-former)

Refer to pages 6-1, 9-1, 10-1, and 11-2 in the "Service Manual" for more details.

Several folks at:

http://groups.yahoo.com/group/IC746

have successfully performed these repairs themselves.

OZ5ACI feels that the way the Q302 transistor is mounted is a design flaw. Icom used the cooling fin of the

transistor as a soldering point, thus when it gets
hot, the soldering melts. That slowly deteriorates
the soldering material resulting in a lost connection
and a cooked transistor. He has a feeling that future
cooked transistors can be prevented by simply unsoldering
the transistor cooling fin to lift it and lengthen the
center leg to establish connection at the cooling fins
soldering point.

AH6LE counters that if the transistor gets hot enough
to melt solder (300 degrees or so), then there are
other problems. Most solid state devices won't survive
such temperatures, thus we're seeing the result, not
the cause.

OZ5ACI used an "overkill" transistor from his junk box
and had to cut a bit of the cooling fin to make it fit
under the shield. The original transistor (2SB1201)
is not very tall and can be left at an angle so no
cutting is needed (or wanted!). He says it's all fairly
simple. The only trouble is that the front section of
the 746 has to be taken totally apart and getting it
back together with no dust behind the plastic screen is
a pain. Get yourself a small can of workshop compressed
air or CO2 if you can.

Of course if your 746 is still under warranty, you
may want to consider going that route. Either way,
contact Icom for the parts you need.

Q:6.6 Is there some way to get the Icom-746 to generate DTMF tones?

No. The IC-746 will not generate DTMF tones.

However, you have some options for generating DTMF
tones yourself.

The good news is that Icom's compatibility table
shows that the HM-14 DTMF hand microphone will work
with the IC-746. It even comes with a handy switch to
enable/disable the UP/DN buttons. Remember, you have
to press the PTT switch to use the DTMF pad.

The bad news is that the HM-14 is a discontinued item,
so availability is limited. Also, as K9HFX discovered,
there are apparently two versions of the HM-14.
The version without the scan button enable/disable
switch did not work for him. More information is needed.

While not listed on Icom's compatibility charts as such,
VE4HAY reports that the DTMF pad on the HM-56 will also

work with the IC-746, but it's scan buttons will not.

Another option is a portable tone dialer, such as one that you could get at any Radio Shack. Just send the tone sequence right through the microphone. Not all such devices give access to the 'A' - 'D' tones, but those tones don't get used much anyway.

Some have suggested wiring a DTMF pad into a microphone cable, much like what you would do for a TNC. However, as yet, nobody has shared any success stories.

Q:6.7 Why don't my "band edge beeps" match the US amateur bands?

Nobody knows what (if anything) the band edge beeps correspond to.

Q:6.8 Can I transmit all the way out to the "band edge beeps"?

Yes, you can transmit all the way out to the beeps. The IC-746, as shipped from the factory, can transmit outside of the amateur radio bands. This has been tested and confirmed on several rigs via dummy loads.

Q:6.9 Can I reprogram the "band edge beeps"?

No, there is no known way to reprogram the band edge beeps. There are no fixes or planned updates from Icom dealing with them.

Q:6.10 Do we know anything about the "band edge beeps"?

The band edge beeps generate a lot of discussion and speculation. As of June, 2001, the band edge beeps on all tested rigs correspond to:

1.8 - 2.0 MHz
3.4 - 4.1 MHz
6.9 - 7.5 MHz
9.9 - 10.5 MHz
13.9 - 14.5 MHz
17.9 - 18.5 MHz
20.9 - 21.5 MHz
24.4 - 25.1 MHz
28.0 - 30.0 MHz

If you know of an UNMODIFIED rig which differs from this,
then please let us know.

While nobody has figured out what the band edge beeps
correspond to, we have been able to rule out several
possibilities.

They do not correspond to the amateur radio frequencies
in Japan. For that matter, they do not correspond to
the ham allocations in any of the IARU regions.

They are not a combination of all available amateur
radio from around the world (a minimal superset).
They are much wider than that.

As wide as the band edge beeps are, they do not encompass
all of the MARS/CAP frequencies. To do that still
requires a "mod".

Any other ideas or info?

Q:6.11 How I reset back to factory default settings?

While pushing in [F-INP] and [M-CL], push [POWER]
to turn power ON.

S:7. Misc...

Q:7.1 Are there different versions of the IC-746?

Yes, there are at least two distinct versions of
the IC-746.

While most of the indications are circumstantial,
one definitive piece of evidence are the two different
procedures for modifying the transmit/receive range.

Another definitive indication are the 2m differences
between the U.S. and Japanese versions. In Japan,
the IC-746 has different auto-repeater offsets and
is limited to only 50w RF output.

There are varying reports about the necessity of
a microphone pre-amp when using Heil microphones,
leading some to speculate upon differences in the
microphone input circuitry. K9HFX was unable to generate
DTMF with an HM-14 microphone; that might be related.
There isn't enough information yet to be conclusive.

Some rigs seem to have problems with the transistors
that drive the LCD backlight, some do not. This might be

due to a circuitry change, or a difference in assembly.
The jury is still out.

The only way the issue will be resolved conclusively
is for someone to organize a data collection effort
to sort out these details by serial number. So far,
no one has volunteered.

Q:7.2 What "mods" are there for the IC-746?

Short Answer

Most people who ask this question are looking for
ways to make the IC-746 transmit or receive additional
non-amateur RF bands. Modifying the IC-746 to transmit
outside of the amateur bands is generally considered to
be illegal. There are a few exceptions; like perhaps
MARS/CAP, transverter usage, changes/additions to ham
bands, etc..., but they can become controversial.

That said, MARS/CAP/TX/RX modifications for the IC-746
(and many other radios) can be found at:

http://www.mods.dk/

Long Answer

Not all mods are about TX/RX frequencies. Here are
some of the others.

W2ENY has devised a way to replace the stock 15KHz or
9MHz IF filters for AM work with 6KHz filters.

http://www.geocities.com/w2eny/icom/filter.htm

AH6LE has modified his IC-746 to provide safe sequencing
for EME work.

http://www.ah6le.net/radiomods.html

OK2WY has a "Simple CAT / programming interface for
ICOM RIGs". Rumor has it that he has also designed an
in-board step attenuator.

http://www.qsl.net/ok2wy/projects.htm

Some folks have replaced the transistors that drive
the LCD backlight in an attempt to prevent overloading
and burnout. See the question devoted to LCD lamps.

Q:7.3 Where can I find plugs for the ACC connectors?

They are 7-pin DIN connectors (the old style AT keyboards used 5-pin Din). A couple (of many) possible sources are:

Digi-Key http://www.digikey.com/

BUX CommCo http://www.buxcommco.com/

Your local electronics store either have them or can get suitable substitutes. For example, most Radio Shacks have the 8-pin DINs in stock (#274-026). They are compatible after you remove the center pin.

Q:7.4 Does audio to pin 4 of ACC-1 trigger the VOX?

Pin 4 of ACC-1 does not trigger the VOX circuitry, nor is the level of that input affected by the front panel mic gain control.

Q:7.5 Where can I get replacement power connectors?

Short Answer

The connector you need is often called an "OEM-T" connector. You can order Icom part number OPC-025A or OPC-025D from any of the major ham equipment retailers for a pre-wired cable.

Long Answer

Icom's cable compatibility chart lists the OPC-025A. Most retailers sell the OPC-025D. Both apparently work. The OPC-025A is rated for 20 amps, while the OPC-025D is rated for 30 amps. Most hams prefer the beefier cables.

Rather than finding another Icom connector, many folks put inexpensive connectors on the cables of all their rigs and power sources. That way they can use any rig with any supply no matter what brand. Particularly handy for switching between mobile rigs. Even Radio Shack has these, cheap.

One very popular connector is the Anderson PowerPole.

http://www.andersonpower.com/

which is readily available from either

http://www.dcpwr.com

http://www.powerwerx.com/

In fact, the PowerWerx folks have pre-wired, PowerPole to
OEM-T cables ranging from 1 to 10 feet long that are much
cheaper than the Icom part (less than half the cost).
You can always just snip off the PowerPole connector
if you don't want it.

Many clubs and organizations have been standardizing
on the PowerPole connectors for their high amperage
12VDC power. This makes all of their equipment
inter-compatible and interchangeable; a real plus in
an emergency. There's a good article on that subject at:

http://www.dcpwr.com/standard.html

Q:7.6 How does one improve the fidelity of a received signal?

Here are several possibilities (not in any particular order).

* Assure precise tuning

* Use a high quality external speaker or headphones

* Try to run without pre-amps or with attenuator

* Reduce the RF gain (increase AF gain to compensate)

* Set TPBT to widest bandwidth

* Use wider IF filters

* Turn off NR, ANF, and NB (in that order)

Contributors + Acknowledgements

There are two kinds of contributors to this FAQ: direct
and indirect.

Direct contributors have written entire passages that
have been incorporated nearly verbatim. Often, they are
specifically authoring something with the FAQ in mind.
Also, they are individuals who have been recruited to
review specific sections prior to distribution.

Indirect contributors have had their comments and input
collected and assimilated from public correspondence
on discussion and news groups, often without their
knowledge. They were simply answering questions,
offering advice, or otherwise just helping people out.

The coordinator has not tried to keep a record of who has
contributed what; the book-keeping would be horrendous.
All sources of information have been INVALUABLE and

are APPRECIATED. Listing contributors here is a
small token of thanks for their neighborly spirit and
generosity. The Coordinator apologies if anyone has
been missed.

Hello,

A friend of mine purchased a Yaesu VX-5R, but we have noticed that it one accept frequencies out of the 50mhz, 440mhz and 144mhz bands.... say for instance a weather frequency like 162.400 or a police freq in the 155.000 range. It was given to me to "figure out" and I was sure it was a menu conflict but I have come up nil. Any ideas?

Thanks!

I'm looking for Yaesu FT-757 GX user manual, is somebody knows where I could
find it on line to download or can send me a copy, I can send you a copy of
service manual.

Many thanks in advance.

Giovanni

Source record: 55982

I hope you remember the original settings. These radios
have hidden programmable service adjustments that require
proper test equipment and setups. That's why they don't
put it in the operators manual. Get the service manual to
find out what you did.

Jim, ac6tk
http://www.cybertime.net/~ac6tk/svs.htm

Ps. If I let the air out of one or more tires, I can change the

Hi there
I have decided to let go from my persona collection an as new Heathkit
SB-303 with filters and noise blanker
This is a rare find especially one in mint condition and original, this one
was factory built.
Thanks for reading this post.

1989. Help with Icom W32A signal receive

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-08 17:44:08 UTC
From: kl465@yahoo.com
Message-ID: <81e10905.0108080944.6d45ccf3@posting.google.com>
Source record: 55991
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.antenna

I own an Icom W32A HT and recently purchased a Larsen NMO mag mount 1/4 wave 2 meter antenna to use with my radio. After tuning the antenna to 146 MHz, testing the SWR, and then again fine-tuning the antenna, the SWR was down to an acceptable level (around 1.2:1), so I assumed that all was well and that my new antenna was ready to be used on 2 meters.

Today, I had a chance to drive around a bit and try out the new mag mount with my W32A HT. It's not in transmitting, but rather receiving that I seem to be having some problems. While driving around, repeaters that should come in nice and clear from my location were sounding very scratchy and full of static and noise. After experiencing this, I detached the mag mount and put on the rubber duck. With the rubber duck the repeater signals were coming in much more clearly.

Would anyone have any idea as to why I might be having this problem? I assume that I tuned the antenna correctly for the 2 meter band, so I would think that the antenna should receive 2 meter signals clearly. Could it be that the rubber duck antenna has gain that the 1/4 wave doesn't? Or, does this sound characteristic of the W32A's notoriously open front end? I'm really not sure if this is a front end problem though, since it's not like I'm hearing other stations or transmissions bleeding in--there's just a whole lot of static and noise.

Any help or advice would be greatly appreciated, particularly from anyone else who owns a W32A and may have had similar experiences. Thanks!

Sounds like noise from the vehicle or if you're in a city where there are tall buildings, multi-path distortions. Did you have the noise when stationary in the vehicle? It sounds as if your mag-mounted antenna is more to blame.

It's possible that a strong signal is crunching your receiver's front end. I've got a little Yaesu VX-5 HT which can receive parts of the HF spectrum. If I connect it directly to a decent outside antenna, I can't even hear WWV. It takes about 30 dB attenuation to reduce whatever's crunching it down to the point where I can hear anything else. That's a lot more extreme than just putting a quarter wave antenna outside the car, but it could be the same thing that's happening to you. If you try transmitting and people report that your signal is ok through the repeater, I'd guess that this is the cause. The cure would be to add a bandpass filter between the rig and the antenna. A short circuited quarter electrical wavelength stub teed off the feedline might be adequate. Or, if there's a particular single strong signal you can identify as causing the problem, a notch filter would do the job.

I have a 2 year old W&W 2500mha NiMH pack I use with an Alinco DJ-X10 hand held communications receiver that is still going strong. This pack is now 2700mha size at W&W. I bought it right after the rig was purchased and it has outlasted the stock NiCd pack. Another Alinco pack is starting to go also. I use the W&W pack the most also. I have no Maha packs, but have some Maha AA NiMH cells and one of the chargers and they seem to be OK. Advance Battery (Periphex) and Mr. NiCd also good sources.

Well, it looks like I may have found the answer to my own question. I was browsing the technical FAQ section of Icom's website and found this:

>Q: My ICOM IC-W32A or IC-T7A handheld radio receives just fine with the >supplied "rubber duck" antenna. But, the receive seems to go down when I >connect my handheld to an external high-gain antenna (yagi, etc.) Why?
>
>A: These particular ICOM radios have been optimized for best performance while >used with the supplied portable antennas. External high gain antenna will >overload HTs front end resulting in poor reception.

I guess this describes my problem, however notice that according to Icom this applies to "external high-gain" antennas. I'm not very knowledgeable with respect to antennas, but am I not correct that 1/4 waves have almost no RX gain? (if i'm not mistaken, I believe the Larsen literature states that the antenna has unity gain.)

I'm surprised that the folks at Icom wouldn't try to make the W32A work a little better with an external antenna for mobile operation. Unless you're outside of a building or vehicle and in an open area, rubber ducks just won't cut it. Don't they take into account the fact that many users will likely want to use an external antenna while using the radio for mobile operation?

I'd still appreciate any comments or suggestions on this topic. Thanks again!

Howdy ,

I'm having thoughts of buying one of these radio's and am indecisive at this point . I would like some input from anyone who has experience with these radio's . I'm guessing that when all is said and done , price will be around $200 which will include shipping and some decent accessories for either one .

Thanks for your input .

Justin,

I also have a 95 ford explorer and I use "ham stick" type whips for the different bands. You should be able to get them at the local ham store dor around 15-20$ each band. I took a mirror mount and bolted it onto a piece of galvanized steel strap. The strap is about 1/8" think and 1.5 feet long or so. They are normally used to strap landscpeing timbers together in the garden and things like that and are available at the hardware store or home depot. The straps have holes predrilled for screws, I drilled on of those holes out to make it large enough to fit a 1/2" bolt. Under the bumper in the back of the vehicle you will see several holes that have nothing going through them. I used the hole closest to the drivers side and bolted the mount there then bent is down a little to make the bar ride parallel to the ground. You will want to find a place to run a ground strap, made of 1" copper weave, from the mounting bolt to the chassis of the vehicle. The bumper is electrically insulated. You will want to go around grounding the large pieces of metal too if they are not already. I lucked out, ford gorounded the hood and tailgate for me. This setup works great or me, I have worked all kinds of DX. The only problem I encountered was a VERY high amount of QRM from the fuel pump. Ford makes a filter that goes on the fuel pump that took care of that problem. After the fuel pump was silenced I had a little ignition noise, changing the spark pulgs took care of that.

Good Luck, let me know if you have questions.

Gary

Don't overlook connecting the mic cable chassis ground Pin 6 to mic cable mic audio ground Pin 7, works most every time with a 735. In the over 200,000 telephone calls I did while working at Icom technical support for 11 years I' ve crossed this bridge well over a hundred times. Your comment about the common mode currents are correct. I had great luck having customers wind a small RF choke of about 5 to 6 loops of coax anoutn 5 inches in diameter at or close to the antenna base.

Well, was going to use the TS50 Mobile, but the guy I was suppose to be getting a 767 w/2 meter from for our base unit backed out of our deal. SO, I'm looking to trade the TS50, or the TS50 Plus cash for a base or base/mobile rig that has 2 Meter on it. My wife and I are currently techs, but going for our Generals, and would like an HF rig that has 2 meter. The Yaesu 767 w/2 meter was looking good. I have a 986 tuner, so dont' really need a tuner, but WHAT DO YOU HAVE?? Open to offers. Not sure what all else has 2 meter on it, 706, 746, ? Or maybe even an hf rig like the 767 that can have modules added. TS50S has been mobile, so it's not new, a few scuffs, but functions like new. Comes in Original Box, has Mic, Mounting Bracket, Manual (copy), and Cables that came with it new. Will sell outright for $500 shipped anywhere in the US. Thanks for looking.

Take Care, Ken & Sallie
KD7MXN & KD7NVZ

PS. Have Numerous Ham references, and over 100 Positives on ebay with NO negatives. Also we take Paypal for Payments.

Hi,
Im moving to Canada from the UK and taking my mains powered 990 with me.
The operating manual states that it has a switchable power supply from 230V
to 115V and all you need to do is remove the case, move the switch and
change the fuse.

Doesn't it care that the AC in Canada/USA is 60Hz instead of our 50Hz ?

Can anyone shed any light on this please

Looking to upgrade my station. I have for sale a Corsair I station complete with matching power supply and the matching external VFO. The Corsair was completely gone through by the factory in March of 2000. The

PTO was rebuilt and lots of other upgrades and part replacements were done at that time. The radios first IF crystal filter has been upgraded from the stock 4 pole to the model 220 8 pole filter. All filter slots are full with the 1.8khz SSB filter, 500hz, and 250hz cw filters. The radio works great with only one small paint flaw in the face plate. The model 260 power supply has no marks on the face plate, and the model 263

VFO also has no marks on the face plate. There are some scratches in the

covers acquired through the years but with the tilt up bales they are not too noticeable. I have a factory molded foam filled box for the radio. And will over pack the power supply and the VFO for shipment. All

are welcome to drop by LaGrange, KY and pick these up if you have the mind to. I will offer the buyer a 7 day trial period from date of delivery to return these for full refund (less full shipping costs). Pictures via email by request. No surprises here folks..the station works great. Check my feed back on Ebay with my call sign as my user id.

Price= $600 and I'll split shipping (lower 48)

73 to all

Source record: 55940

I have owned my th78a new since 1994 and it still works fine.

One feature this dual band radio has is that when transmitting on one band
it will mute the other band from the speaker so you will not pickup the
sub band receive during transmit. the icom will not.
(you can deactivate the muting if you want to)

Both radios have lots of accessories and you can not go wrong with either
one.

Try one in your hand if you can at a hamfest or at your club meeting.

The 76 is tall and skinny and the icom is slightly wider and thinner.

In a deep valley, the lower frequencies will get out quite well. On 160
and 80 you'll hardly know the difference, 40 will be almost as good, 20
will be fair for close-in stations, 15 and higher...probably not too
good, but give them a try anyway.

I haven't actually lived in a valley, but this has been my experience
while mobiling in and out of them.

Bill, W7TI

2042. FS: Signal Generator .05-90MHz AM/FM/CW w/service manuals!

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-09 19:56:31 UTC
From: tomg@fullnet.com
Message-ID: <11915d6.0108091156.5db39fb1@posting.google.com>
Source record: 55946

FS: Signal Generator .05-90MHz AM/FM/CW w/service manuals!

AUL Instruments, Inc., Model SG-1144/U

Excellent Condition!

(Several for sale, and one for auction on Ebay.com.)

NOTE!!

(I have a few more of these that are almost identical, for sale for
only $159 each plus shipping costs. Email me for photos, questions, or
a shipping quote, at tomg@fullnet.com. And, check my website for
many, many other great used test equipment bargains, at:

http://www.fullnet.com/u/tomg/gooteesu.htm)

See photos (and bid on one of them, on Ebay) at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1625673519

Auction ends on SUNDAY, Aug-12-01 12:30:42 PDT.

You will be bidding on or buying an AUL Instruments, Inc. SG-1144/U
Signal Generator, INCLUDING the two SERVICE MANUALS on a CD!

This is a good signal generator, completely functional and ready to go
to work for you. It's a nice unit, covering from less than 50 KHz to
90 MHz or more, providing CW (sine) output and AM or FM modulated
output, with output-level ranges from 0.3 microvolt to 1 volt RMS,
with digital frequency display and two analog meters, for Modulation
and RF Output.

It is in great condition, and has been tested by me, and works fine.
It came with military surplus documents that show a condition-code of
B, which means: serviceable and issuable without qualification. It
ALSO includes an inspection report that says "NO FAULTS FOUND"!

Everything is intact, and in very good used operating condition. There
is no physical damage that I can see, except for minor signs of normal
wear and tear. I tried almost all of the settings of all of the
controls, and everything I tried worked as expected. I did not notice
any noisiness in any of the controls. I did not rigorously check the

calibration (but it looked very, very close), did not test with external modulation, did not check the rear auxiliary output, and did not try running it on 230 volts. I also did not test the 100-Watt reverse power protection feature of the output.

The winning bidder or buyer will have a 10-DAY MONEY-BACK RIGHT-OF-RETURN if DOA.

The Ebay reserve price is only $119.00! You might get a deal! (Or, "Buy It Now", for only $159 plus shipping.)

Functional Description, AUL SG-1144/U Signal Generator:

50 kHz to 90 MHz Coverage, in Five Frequency Ranges

Digital Frequency Display, 4 digits, with "Display Test" button

Coarse and Fine Tuning Controls

Analog RF Output Meter: RMS Volts and dBm

Output Levels from 0.3 microVolt to 1 Volt, -120 to +10 dBm, in Fourteen Ranges (maximum output: about 3.4 volts p-p)

Variable Output Level Control

Analog Modulation Meter: AM Percent and FM Khz Peak

AM Modulation: 400 Hz, 1 kHz, and External

FM Modulation: 150 Hz, 400 Hz, 1 Khz, and External

FM Meter Range Switch: 10 KHz or 75 KHz full scale

Variable Modulation Level Control

Overmodulation Indicated by Flashing Frequency Display

External Modulation Input, BNC, 600 Ohms

RF Output, BNC, 50 Ohms

Output has Reverse Power Protection, 100 Watt Max.

Auxiliary Output, BNC, on Rear Panel

Permanently-Attached Power Cord, Three-Prong, with Cord-Wrap Storage

Operates on 115V/230V, Selectable On Rear Panel

1 Amp Slo-Blo Fuse, Accessible on Rear Panel

See photos and bid at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1620922189

Thanks, everybody.

Other than the operating frequency, of course, operation should be the
same as the DJ-S41. You can find a good manual (more informative than
the Alinco manual) at:
http://world.std.com/~wdr/alinco.html

Hope this is of use for you.

i have two yaesu vx-1rs, and have a problem with both. one of them does not power up at all, either from the wall charger or the battery. is there a simple solution for this, or is this something that needs to be looked at? also, my other vx-1r does not power up from the battery. i know the battery is good, but i think i blew a fuse for the battery or something, since it does power on from the wall charger but not from the battery. if anyone knows of an easy and/or relatively cheap way to correct these problems, please let me know. Thanks in advance
M-.

I bought a TS-130 SE new and have used it off and on since as a backup rig. It's quite basic (e.g.--no dual VFOs/no split freqs), the audio is very good (both ways), and it is usually reliable--but it has quirks.

The biggest recurring problem I've had with it is the loss of PLL lock numerous times for no apparent reason. I sent it in to Kenwood service facilities (originally Long Beach and Kenwood's contracted service vendor at Cerritos). In all cases no one could figure out why the PLL unlocked. It still isn't fixed--despite a hefty charge from Cerrritos last year for their time looking into it.

Unless the TS-130 is available for a VERY low price, I'd I'd go for an Icom.

Source record: 55853

Depends on how deep and steep the valley is. On my drive to work I drive thru an area that is about 200 ft wide at he bottom where the road is with the sides going up 300-1000 ft on each side at a 75 degree angle from the bottom. I can't send or hear a thing from that area. However, as the road winds up the side, as long as I can get a take-off angle of 15 degrees from horizontal or so, I can reach out to Germany or Great Britian from the vertical mounted on my truck.

If you can get that 15 degree takeoff angle, you should be able to do pretty good.

Contact the nearest Industry Canada office (probably Vancouver) and ask them. Your British license will most likely be recognized and you won't have to take any exams. They'll issue you a VE7xxx callsign unless you request a two letter suffix by writing some sort of a bio showing that you have been licensed as a ham for over ten years.

As far as losing/keeping your G call, you'll have to consult the RSGB. Canada has nothing to do with that.

2054. Kenwood TR-7930 Problems....

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-10 02:40:59 UTC
From: Frizz <kg4ivt@hotmail.spamsucks.leaveme.alone.com>
Message-ID: <9kvhcj$7tg$1@bob.news.rcn.net>
Source record: 55858

I bought a Kenwood TR-7930 real cheap (this probably explains most of my problems) and it is now giving me some audio troubles. Whenever I key the thing up I get this crackling in the audio. Some people notice it and some people don't but most people do. However, I have checked the mic, tried a new mic, checked the mic connector on the mic and the radio and even cleaned all the little edge connectors on the circuit board. I still have this crackling. Sometimes it almost sounds like, for lack of a better description, an small audio amplifier when you place your fingers across the input contacts, self oscillation (I guess).

This radio is old, I know, but I really enjoy it and it works well for me. I would like to fix this problem but have tried everything I can think of. This problem is intermitant so it is not terrible but constant enough that it is noticeable and annoying. Also, the previous owner turned the output power up to about 35 watts. How can I turn this back down? Will Kenwood service this thing?

Any help is appreciated. Thanks!!

kg4ivt.

I bought a TS-130S and remote VFO new over 20 years ago. I still have them both and use them. The 130S is my 40 meter rig at home and my mobile rig while in the motorhome. I have had absolutely no problems with it. No memory batteries to replace, etc., just a good basic xcvr, in my opinion.

From: bierbier@dslextreme.com
Message-ID: <tn72ub2e1b5e78@corp.supernews.com>
Source record: 55866

I bought a FT757GX cheap and noticed that when in LSB receive the pitch of the sideband sounds higher then the other sideband. Turning the Shift control a litle bit to the right (about 1 o'clock) corrects the problem. Does anybody know if it is the Crystal Filter in the radio or maybe bad caps? A point in the right direction is appreciated.

Thanks,

Guntier

It's at the same online web page you used when you entered your info for the universal licensing system. If you haven't done this yet, you need to register first, and then once registered you can modify the license info. See

https://wtbwww05.fcc.gov/cgi-bin/UlsTinRegistration/UlsTinRegistration.exe

for details.

>
>
> WB6GFM

The reason I prefer the IC-730 over the TS-130, is the icom is more stable in general, it's got a real good quad conversion rcvr, and most of all it's got three tuning rates. It's real easy and fast to tune when driving. You can go real fast, or real slow, or in between. The TS-130 only has one speed, and it's fairly fast and a PIA to tune on a bumpy road. Also the 730 has two VFO's and a tunable memory per band. I'm not sure if the 130 has two vfo's unless you get an extra outboard vfo. The 130 is good with the DFC-230 VFO, but thats two boxes to carry around. Being the 730 and 130 go for the same appx price usually, I prefer the 730 if I had to pick. Of course, I'm biased...I have had a 730 for years..:) But I've used plenty of 130's also..The 730 is hands down easier to use mobile. And to top it off, it looks pretty good too. MK

OK, I know "hi-fi SSB" is a pipe dream, simply because of the bandwidth (or lack of it...), but there's a possibility for a "broadcast studio"-type sound on AM, right?

So, I have an older Yaesu HF rig that I run on 6 meters AM. Works great, get good signal reports, but I'd like a studio-type mic for it, or a way to get really good audio from it. I already checked into Heil Sound...too expensive for me. Anything else I can do?

73s,

Jim

If that is your quest, I would focus energy into finding an old boat anchor
6 meter rig. Better chance of getting that hi-fi sound.
Between the two Johnson Rangers, I think one or perhaps both had 6 meters.

FS: AN/GRR-5 military shortwave radio HF (1.5-18mhz coverage)
receiver. It comes with its mounting
base also and will run in both portable, mobile or AC power. Unit
is unchecked but appears complete and
unmodified. I also have a R-109/GRC VHF receiver to go as part of
this package. These were sold but
buyer never came through. These are the only radios left out of
this estate. $125 for both radios.

Source record: 55875

If what's preventing the audio from being acceptable to you is really the microphone, there are many reasonable cost options without resorting to a studio microphone. A true studio mic will start at twice the price of the Heil, and go up quickly.

I suggest you try a microphone designed for vocal and instrumental performers. They're known as "performance" mics and can be found at any good music store, or even Radio Shack (!). I use such a mic, an Audio Technica ATR-30, which I found at the Radio Shack web site (not in the stores) for $39.95. I've also seen them on the shelf at Best Buy for $49.95. This is a good quality mic, nice construction, with an appearance very similar to the Heil mics. I find that many of the "performance" mics are almost identical in appearance. The mic came with a mount that can be used on any stand, and a 15' cable with XLR connector on one end (the mic end) and a standard 1/4" male plug on the other.

The frequency response is essentially flat over the entire audio range and the output level appears to be the same as my other mics, including a Heil. It works great with my TS-950. If you go to a music store to look at the mics, make sure to take a look at the variety of microphone stands available there as well. In general, they're much cheaper than their ham radio counterparts.

Start listening to 14.178 in the early evenings if you want to get an idea of what is currently being done with hi-fi SSB. But, you will need to listen with a wide passband receiver, and excellent audio system including the speaker(s) to really hear what is there. I use an Icom PRO with 3.6 KHz IF passband into a good stereo amp into large stereo speakers. The audio comes from the rear panel connector to avoid almost all of the internal analog audio circuitry.

The abilty of AM to have a wide frequency response over SSB is mute on the ham bands. You have the same allocated bandwidth. "3 kc". SSB, AM, whatever. Being as you are restricted to this 3 kc bandwidth, you will not get any better audio response by using AM over SSB. If you have "true" broadcast quality AM, you are illegal. The maximum legal "high frequency" response on either mode is 3000 cycles. Myself, in general I prefer SSB over AM for audio purposes. The only trick is being dead on frequency with the others you work. There is no phase distortion when using SSB for one thing which will plague you when using AM. Not to mention the S/N ratio is loads better when using SSB over AM. As you can tell, I'm not much of an AM fan. It's like filling up your car with gas, and pouring most back out on the ground. Too much wasted energy in the carrier, and the unneeded sideband. So to sum up, I would use the same type mikes , etc on AM that you would use for SSB. Whats good for one, is good for the other. The bandwidth is the same audio wise. If you run legal that is... BTW, if I had 10,000 cycles of available bandwidth, I'd still choose SSB. Note the SWBC ers' use SSB for most relays. They ain't no fools... MK

Yeah, I don't see the difference between a $40 Audio Technica and a $150 Heil Goldline, except the Audio Technica doesn't have a gold windscreen... :)

Also, I can pick up a shelf-mount boom and footswitch at a local music shop for a lot less than what Heil's switch and boom goes for, at least at AES...

Thanks.

73s,

Jim

I have one that does the same thing. It's probably just a dirty
potentiometer in the volume control. I haven't bothered to take mine
apart to try electronic clearer spray (freon) or WD-40 on it , but
that would probably fix your problem. If not, the volume control/off
pot needs to be changed.

Source record: 55893

Mark - Suggest you give a little more thought and research to your response. This really seems to be impossible - AM is DSB or double sideband. That being the case - you have TWO 3kc sidebands. At the minimum then an AM signal MUST be twice as wide.

By the way, there is NO definitive bandwidth on AM. Try an in-depth look at Part 97.

The reality to Hi-Fi AM is NOT the microphone in the vast majority of radios. It has to do with the audio section of the transmitter where low pass filtering on roll off of lows are done through interstage capacitance. Usually the circuitry must be modified.

Older tube type boatanchors are probably better up to the job.

Last note: Old commercial broadcast KW AM transmitters ARE legal, and DO run AM on the ham bands.

I would like to buy a blown 516 F2 power supply for my Collins gear.
I have a good cabinet and transformer. Would like to buy the guts of
a blown one so I could put a complete supply together for a good
price.

Anybody have one they want to sell?

No, I don't think it's in there, but being you are limited to 3 kc
(6kc counting both sides" this will be the appx limit. If you started
at 250 cycles, and had a sharp cutoff below that point, I guess in
theory you could go up to 3250 cycles. But I think in general practice
few filters on ham rigs go above 3000 cycles. Most cut off a little
lower than that. MK

Sure, but we were talking audio freq response. In general 3 kc is the
limit to be legal.
>
> By the way, there is NO definitive bandwidth on AM. Try an in-depth look at
> Part 97.

No , there isn't , but they are quite clear on the maximum bandwidth
of ANY signal in that part of the spectrum. Which is 3kc SSB, which
yes, equals 6 kc total counting both sides. But as far as the
frequency response, which was the real question, he would have no
advantage running AM as he can't legally take advantage of using a
wider signal.
>
> The reality to Hi-Fi AM is NOT the microphone in the vast majority of
> radios. It has to do with the audio section of the transmitter where low
> pass filtering on roll off of lows are done through interstage capacitance.
> Usually the circuitry must be modified.

Of course. Thats the whole point. "HAM" AM transmitters do not use
wide enough fitering to be considered hi-fi.

>
> Older tube type boatanchors are probably better up to the job.

Maybe, maybe not. Few modern AM BC stations use tubes anymore by what
I hear. Most have gone solid state. Or at least the ones that can
afford it.
>
> Last note: Old commercial broadcast KW AM transmitters ARE legal, and DO
> run AM on the ham bands.

Not if their total bandwidth exceeds 6 KC. I thought most commercial
AM BC transmitters were filtered to give a bandwidth of appx 8-10 KC?
If the cutoff of these transmitters is that high, they are most
certainly not legal to operate on the ham bands without modification.
Which is no big deal to do....I just hope they did this...MK

I'm not sure how you're defining a studio-type mike, but the last time I checked the cost of really good microphones that are being used in audio recording studios, these puppies were selling for about $2,500 -- and that was back in 1989.

I know you can get a perfectly fine mike at Rshack for $39.95, but that ain't a studio mike...

I think most of you folks are missing the real issue. To get High Fidelity audio is not so much the microphone as it is the transmitter.

Go look at the response curves of the D-104 and the Shure 444. Go to BAMA and look at the Shure 737A (a broadcast mike of the 50s). The audio response runs from 100 cycles to 12,000 cycles. A compressor/limiter and an equalizer will flatten and fatten the response.

The limits are built into the radios. They roll off the lows and through low pass filtering, limiters, and clippers, cut off the highs.

You can put a $5K microphone on today's radios and you won't get a broader audio output.

I am going to be taking my 6M7JHV (31' boom @ 17lbs) on a dxpedition. I want to setup a 30' mast for it. The mast needs to be collapsable or be able to disassemble down to at least 6' sections to fit on the plane. The only critical issues we have is that it can handle the wieght and torque of a 31' boom. I expect to use at least two sets of three guys.

I'd prefer something that is 2" wide at the top. Weight is also important as we'll be charged for each pound of our equipment over limit on the plane.

Please EMAIL suggestions, comments to: n1rz @ n1rz . org

Speaking of habits, I wish everyone would get in the habit of using a spellchecker on their posts before posting them to the group. Second, from reading both accounts I believe that Radio Mart has gone overboard to please this customer. I would not send him another radio either without the second one he has being returned. I have never heard of a radio being exchanged like this unless they were DOA.

JMHO without the name calling and insults - "can't we just all get along?"

Goto www.fairradio.com/antenn.htm and look at the following:
AB-1244/GRC MAST KIT twelve aluminum alloy on steel sections form sturdy,
yet lightweight 30 foot 1.7" dia mast. Kit includes five each lower and
upper sections, one ea lower and upper adapter sections, gin pole swivel
base, four ea 36 and 42 ft guy ropes, four guy stakes, two guy rings plus a
2.5 pound sledge hammer. Part of OE-254/GRC antenna set; 30 lbs sh. NEW,
$139.50

This Mast is not 2 inches in diameter but we used 4 of them at this years
Field Day for a 4 1/4 wavelength 20 meter rhombic under call K7IP. There are
real easy to put up. We had 40 foot masts , you use 5 sections of the 40
foot mast and the square plate on the base to locate your guy anchors. Then
you pretension 3 sets of the 4 guy rope sets and using the last (4th) set
you pull the mast up into place. Then you go about adjusting the mast for
best verticle position. They worked very good. We have also had a tribander
upon one of these masts in a past field day.

Good Luck

Gary Fiber K8IZ formerly KF7XV

2115. FT: Computer gear for HF Rig / Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-11 16:52:44 UTC
From: RPK <compsales@ultravista.com>

FT: Computer gear for HF Rig / Equipment

I have the following computer gear available for trade or sale on a "newer" HF rig and equipment. Specifically interested in the below units but open for other suggestions. I am workable, will put money into it if your gear is worth more.

* Kenwood TS-50, TS-840, TS-847, TS-900
* Yaesu FT-100, FT-840, FT-900, FT-847
* Icom IC-706 / 706 MKII / 706 MKII-G
* Alinco DX-70 / DX-77
* or ??

What I've got.

// Compaq Deskpro Server
400 MHZ, 128 MB Ram, CD-ROM, 8GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard, Windows 2000 Professional. Tower case.More ram is available.

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 5 GB SCSI-2 HD, 10/100 NIC, Adaptec Ultra Wide SCSI Card, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Desktop case

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 6 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Desktop case.

// Compaq Deskpro Desktop - Small Form Factor
466MHZ, 128 MB Ram, 8 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Small form factor case, very small footprint.

// Sun SparcSERVER 10 - Unix
50-MHZ RISC processor, 96 MB Ram, 4 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Sun SparcSTATION 5 - Unix
70-MHZ RISC processor, 64 MB Ram, 2 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board Sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent

webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Hewlett Packard Rack Mount Network Hubs
4 available, 2 14 port and 2 15 port hubs. All are in excellent condition and recently removed from service. These are rack mount servers.

// Proxima LightBook LB20 DeskTop Projector
SVGA and RCA inputs, 200 ANSI lumens, Serial jack, Computer in jack, Monitor out jack, Video in jack, Audio in & out, TV output, Twin Lamp, True SVGA compatibility (800 x 600), International power supply, LightBoard drawing tool, Remote control, Lightweight (11 pounds - 13.5 x 9.25 x 5 inches), Custom padded case. This unit is in excellent condition and includes all the original equipment (cables + books).

If you see something you like, please let me know. I am open to trades or sales on any of the machines. Willing to trade multiple machines for the right gear. Response via Email is preferred.

Sales always welcome ...

Thank you!
sales@ultravista.com

I'm posting this for my computer underpriveleged buddy John Soine, WB7WQK. He's a very straight shooter, and will tell you exactly how it is, no BS. He's looking to sell the below listed rigs, or trade a combination of the following for a 756 or 756 Pro, or ?. Here's the list:

Icom 751, just brought back from Icom (he lives within driving distance to them) ALL updates, repairs, and alignments done. With SM6 Mic, Manual, and built in PS35 Power supply. $650.00 O.B.O.

Kenwood TS930S/AT w/CW Filter, MC60 Mic., Matching Speaker w/filters, original double boxes. Needs power supply repaired, cosmetically a solid 9. $550.00 O.B.O.

Alinco DX70TH 6-160 meter, 100 watts out all bands, Mic, Manual, Box. Has matching EDX2 HF Autotuner. $700.00 O.B.O. for the pair.

Please contact John directly @ 360-428-5995, let it ring, if he doesn't pick up it will go to his cell phone which he always has with him. He's open to offers, and loves to dicker, so give him a shout.

I actually have tried some of the sound card programs to a certain degree however the big problem lies in the fact that my existing software package utilizes the com port which basically requires an external TNC. Updates for usage of the sound card are not immediately forthcoming as well. Nice idea though.

What exactly is it that you want to do with the TNC? It sounds like you already have software that you want to use and that would greatly influence the choice of a TNC. Other factors would be the modes you want (or need) to operate and your budget. Do you want to log on to one of the e-mail forwarding services? If so then you'll need Pactor or (if your budget can handle it) Pactor-II. If you just want to chit-chat then PSK and other "sound card modes" would work. It's kind of like the question "which is the best car to purchase". The answer depends on whether you're going to use it to commute or to pull a big trailer.

It's probably best to go from the radio's headset jack to the sound
card's line input so you don't overdrive the input to the sound card.
You could also use an attenuator made from a couple of resistors if
the sound card only has a mike input.

> By the way, there is NO definitive bandwidth on AM. Try an in-depth look at
> Part 97.

That's what I thought; there's no limit to audio bandwidth, just
"common sense" so you don't splatter all over someone else's QSO.

> > Note the SWBC ers' use SSB
> > for most relays. They ain't no fools... MK

I thought most SWBC stations used AM, because receivers for AM
reception are more common for listeners to have than BFO-capable SSB
receivers. AM receivers are generally easier to design because they
don't have to tune exactly, and insert the "missing" carrier for audio
reproduction.

The tuner is usually last then the antenna. Sometimes it could be radio/tuner/amp/tuner. Some solid state rigs don't like some amps without a tuner between them. Make sure the last tuner is rated for the amps power.

I will if I get the time to look it up. But this applies to all voice
modes on HF, not just AM. You can not legally run a AM BC transmitter
on the ham bands if the width of the signal exceeds 6 KC. 3+3 =6
You'll just have to take my word for it for now. I'll look it up when
I get time. Or be my guest if you are having a slow day. If what you
say is true, I could run a 5-6-8 kc+ wide signal on SSB. Of course,
the fcc will frown on that. AM can only be twice as wide as the widest
legal SSB signal. Which is 3 kc. MK

in conjunction with this page. ...At the time

of the first contact, we had been working for

several years with the intent of pushing

through and past the numerous levels of

presumed discarnates, lower level

NON- incarnates, and assorted other entities

which we tested and sent away.

Eleven months to the day after a VERY

extraordinary sighting of a UFO which was

seen by disasociated third parties, and which

received extensive press coverage in the St.

Petersburg Times,(Florida), three loud claps

of thunder were heard directly over the
house where we had been working.
This thunder came out of a clear sky,
and was unusual in that it vigorously
shook the entire building. After the
excitement of the sounds abated, we
resumed our work, and the following
came through: /.../ Some time later,
a new scientific discovery was reported
and the Cassiopaeans commented on it:
/.../ One of the interesting things about the
Cassiopaeans is that we almost never
communicate with the same entity twice.
This was puzzling in the beginning, but
eventually made sense: /.../ Naturally, we were
curious about the appearance of our communicants.
Thankfully, the Cassiopaeans were patient with our
endless questions! /.../ It is naturally difficult for
those of us in our realm to fully understand 'higher'
realms. We always want to understand and interpret
in the most simple of terms - including yours truly!
/.../ We later learned a little about why so many
sources begin with the promise of very high level
information, and then become corrupted and obfuscated
and deliver so much 'disinformation' that is a clever
combination of lies sandwiched between truths:
/.../ I would like to invite you to check back with us

> Bill, W7TI

According to what I find so far in part 97, ALL A3E emmisions must be
limited to "communications quality" width. Now, most all would agree
that communications quality audio and hi-fi audio quality are two
different animals. The filtering you see on all modern ham rigs use
"communications quality" audio. IE: the filtering is cut off above
usually 2400-2700 cycles. So if you have audio that extends from
100-2400 hz, which is quite normal, you have a 2.3 KC wide signal.
Actually, many times the low frequency response will dip below 100 hz,
so for all practical purposes, this is a 2.4 KC normal SSB
commincations quality signal. And the "standard width for most all
rigs" This is the current standard amd amateur state of the art for
that mode.
I still maintain, AM properly run on the HAM bands can not exceed
twice this bandwidth. I give the benefit of the doubt and say, 3 kc is
max for SSB, which is wider than most actual SSB signals. So this
means 6 KC MUST be the limit for a proper AM transmission on the HAM
bands. They don't say an exact number, but by stating communications
quality audio they make it quite clear. Communication quality audio
does not exceed 3000 cycles on the high end. Or at least, none I've
ever heard of does . If Riley says a wider signal than this is legal,
I still maintain he is in error. But like I said, I'd have to hear it
myself to believe he actually says that. A 8-10 kc AM BC transmitter
is not communications quality audio, and is illegal as far as I'm
concerned. And thats not even really hi-fi....BTW, you only need 5 kc
for a decent communications quality AM signal. This gives you highs up
in the 2500 cycle range. MK

Not quite. SSB DOES have a bandwidth limit. For some reason the FCC did
NOT limit AM audio bandwidth.

>

Jim, this is true. AM stations transmit by just that - AM. For relay
purposes they normally run satellite uplinks and downlinks. They simply PAY
for the bandwidth they use.

I would rethink that statement Mark. As he heads up the enforcement branch
of the FCC, I believe he has a BETTER knowledge base than you do.

Jack Parsons: a Pasadena kid who turned his enthusiasm for
experimental rockets into patents for Jet-Assisted-Takeoff,
and became a co-founder of Aerojet (Aerojet-General) and the
Jet Propulsion Laboratory. He was also the head of an occult
lodge based on the teachings of Aleister Crowley, whose
magic rituals incorporated sex as an essential ingredient.
http://www.zolatimes.com/JparArt/JackParsons.html

King of the Rocket Men Profiling Jack Parsons, occultist and rocket Pioneer
http://www.forteantimes.com/artic/132/parsons.html

Liar! Liar!

Church of the Subgenius!
http://www.subgenius.com/

Robert Anton Wilson
http://www.rawilson.com/main.html

Aleister Crowley (decked out in his Frater Perdurabo suit) once penned:

"
: The Universe is the Practical Joke of the General

: at the Expense of the Particular,
: quoth Frater Perdurabo, and laughed.
: But those disciples nearest to him wept,
: seeing the Universal Sorrow.
: Those next to them laughed, seeing the Universal Joke.
: Below these certain disciples wept.
: Then certain laughed.
: Others next wept.
: Others next laughed.
: Next others wept.
: Next others laughed.
: Last came those that wept because they could not see the Joke,
: and those that laughed lest they should be thought
: not to see the Joke,
: and thought it safe to act like Frater Perdurabo.
: But though Frater Perdurabo laughed openly,
: he also at the same time wept secretly;
: and in himself he neither laughed nor wept.
: Nor did he mean what he said.

Marcelo Ramos Motta
(a late competitor to the OTO title who lost in court):
http://www.ozemail.com.au/~realoto/nclr.html

From The Book of Lies - LIBER CCCXXXIII
by Frater Perdurabo:

THE SORCERER

A Sorcerer by the power of his
magick had subdued all things to
himself.

Would he travel? He could fly
through space more swiftly than
the stars.

Would he eat, drink, and take
his pleasure? There was none
that did not instantly obey his
bidding.

In the whole system of ten
million times ten million spheres
upon the two and twenty million
planes he had his desire.

And with all this he was but
himself.

Alas!

Etc.... etc..... etc..........

"The problem of anxiety in our time is about
being in our bodies, or not. The old system
for emotional stability was to traumatize
our children and take sedatives as adults.
(Religion has been a leading sedative.)
This made an opening for an efficient
warrior class: traumatized,
out-of-their-bodies (and hence insensitive)
performers of violence. And it gave a deep
legitimacy to the occurrence of violence in
society, whatever the surface inconvenience.
However, now that efficient violence depends
on extremely complex technology, the old
warrior class is obsolete. So, we are now
engaged in the task of reversing the cultural
practice of traumatizing our children and
sedating ourselves, and the 'deep legitimacy'
of violence is eroding, ever so slowly."

When Jack was a 12 year old kid, a guy named Walter Breen*
made a series of phone calls to his NY apartment pretending
to be a conscious machine from the future. He told the bright
youngster that if he accepted his future role as a scientist,
he would meet "the others" who would one day help Jack
facilitate great technical achievements. Young Jack "accepted",
and has been seeking fruition of this self-fulfilling prophecy
ever since. Jack's greatest joys are Gilbert & Sullivan
musicals which, no doubt, would have kept him out of trouble
had he succeeded as a stage performer.

*<> Convicted paedophile Walter Breen (died 1993)

All that means is he's in charge. If he's saying that wide BC
transmitters are legal on the ham bands, I think that's in error. Who
he is isn't going to change that. I still don't believe he even said
that anyway. Or if he did, it was taken wrong, and he didn't give
consideration to the bandwidth used. He might have said using an AM
transmitter was legal on the hams bands. Period. Which is true. That
doesn't mean it doesn't need to be modified to be in accordance to pt
97 when used in the amateur service. MK

Clearly (or maybe not so clearly) this is one of those semi-gray areas of the rules.

Under 97.307 (see below), (a) seems to infer the usual "no more than necessary" rule.

Yet in (b), the FCC states that emissions "must be confined to the band or segment available", which to me at least, seems to imply that as long as your emission does not extend outside of you legal frequency assignments (say the 20 meter phone band), and is otherwise clean, you are ok.

But then again, in (2), we have our previously debated "communications quality phone emission" wording, which technically speaking, is 300-3000Hz give or take a few. However, this particular subpart is referring to "non-phone" emissions and the "communications quality phone emission" is used as a reference. Still, the reference is implied that phone communications are not "broadcast quality".

I have always followed the rule that where the FCC is concerned, error on the side of conservatism.

While to some extent, it seems that the rules may indicate that running "broadcast quality audio" is perfectly legal, with some stipulations, it would probably be considered poor operating practices for Amateur radio as it would unnecessarily occupy excessive bandwidth to convey the "information being transmitted".

Personally, I believe this is how the FCC would probably interpret the use of "wider than necessary" modulation.

I suppose with current technology it would be possible technically, to transmit phone in a manner that with the proper equipment, could be received at the other end as "broadcast quality". However, other than sounding really nice, it, "broadcast quality audio", really serves no purpose where Amateur radio is concerned, does it?

73,
KA9FLX
****
97.307 Emission standards (not the whole thing). :-)
(a) No amateur station transmission shall occupy more bandwidth than necessary for the information rate and emission type being transmitted, in accordance with good amateur practice.

(b) Emissions resulting from modulation must be confined to the band or segment available to the control operator. Emissions outside the necessary

bandwidth must not cause splatter or keyclick interference to operations on adjacent frequencies.

(2) No non-phone emission shall exceed the bandwidth of a communications quality phone emission of the same modulation type. The total bandwidth of an independent sideband emission (having B as the first symbol), or a multiplexed image and phone emission, shall not exceed that of a communications quality A3E emission.

****

I see no distinction between the two in the part 97 I'm reading .
Phone is phone. And according to all indications I can see in part 97,
ALL phone signals must be using "communications quality phone
emissions" quote,unquote,and they also add that no tranmission may use
a wider bandwidth than needed for the information rate and emission
type according to good amateur practice. Running a signal that takes
the room of three or more SSB signals is not good amateur practice. MK

No, I'm against people that think they need more than their fair share
of bandwidth. Communications quality AM is wide enough as it is, to
take the place of two SSB qso's. Are you proposing that you are
special and need even more? You want to take the room of three maybe
even four qso's? If thats the mindset of the average AM'er, then yes,
I say to heck with all of them. Of course, I have no problems with
those that want to use only their fair share. It's the ones that think
they are special and need even more that get my goat.

The flaw in this is that would make it legal to run a 20K wide signal
if desired. IE: a high end response of appx 10,000 cycles. This
paragraph I take to mean only as to stay within the allocated
frequencies assigned to you. IE: If you at the top end of 20 meters
running USB, you need to stay 3 kc's below 14.350 to ensure that you
don't extend above that frequency. So the safe limit would be 14.347.
If you are at 14.348 , you will extend above the top limit. Or with
the average SSB filtering anyway. "2.4kc".

Being they use this type audio as the referance and do not specify
whether AM or SSB, I consider this rule to apply to both. I think this
wording is the best and most clear of the whole non clear Part 97...:)
If a non phone signal can't be any wider than this, how in the heck
can another phone emission be wider and be legal? As far as I'm
concerned this paragraph pretty much nails it shut for me. But thats
just my opinion....
>
> I have always followed the rule that where the FCC is concerned, error on

I consider running an AM signal wider than 6 kc on the ham bands about
the same as splattering on SSB. Yucky and rude amateur operation.
>
> Personally, I believe this is how the FCC would probably interpret the use
> of "wider than necessary" modulation.

I would have to think they would consider it poor amateur practice. If
communications type audio is the limit, I consider it illegal. "I
consider the upper limit of this type audio 3000 cycles". And that
VERY GOOD communications type audio.
>
> I suppose with current technology it would be possible technically, to

I completely agree!

The problem is that so many desire to interpret the rules one way or the other based on specific wording of a given section. However, as you state, one really should look at the bigger picture, which encompasses all of the "specific wording".

The rules have always been "use only what is required". The use of Hi-Fi, or broadcast quality audio may sound nice, but would be considered at a minimum, rude. We in the Amateur service are not broadcasters, nor do we require the use of audio bandwidth greater than basic telephony. In fact, I would argue that actually occupying 300-3000Hz with a flat response, would probably sound like "broadcast audio" to most people, assuming one's receiver had the filters to pass it! :-)

We are required to share a finite amount of spectrum. To that end, I think the FCC has been generous in allowing the continued use of AM (as opposed to SSB), which is fine. Not because there are people who desire to run AM, but rather because there is no legitimate way to exclude their operations when some digital modes on HF occupy the same amount of spectrum.

Still, this should not imply that Hi-Fi/broadcast audio is acceptable, as it is simply unnecessary for communications, and I honestly believe that is where the FCC would come down on the subject. Again, if you can emulate Hi-Fi with a technical solution, which keeps you occupied bandwidth comparable to that of basic AM, go for it.

Finally, despite some "specific wording" the legal practice the FCC has followed to date does sort of clarify the 97.307 (b), in that if the FCC really allowed one to occupy the entire "band or segment", then why is modulation like FM limited? Certainly it would be possible to have higher quality audio on FM, if one were to occupy the fully allowed spectrum (I am accounting for the entire modulation and sidebands, etc...), right?

A little dose of common sense when interpreting the rules goes a long way, as well as some old truths. If it sounds too good to be true, then it probably is.

I would offer that anybody running a signal wider than "good practices" allows, without a special waver, would be contacted by Mr. Hollingsworth or his "associates". :-)

Never mind the other outraged occupants of the particular band! :-)

73,
KA9FLX

How many people actually HAVE any significant frequency components above 3 KHz in their voice? As far as I know, even opera trained singers like Mariah Carey can only hit around 4 KHz as a top frequency, and since one isn't supposed to sing on the Amateur bands, I doubt seriously that even she would surpass the legal bandwidth. So, that being the case, 3 KHz bandwidth should be adequate for "hi-fi" on the ham bands, either AM or SSB..

Source record: 55761

I have the 223 1.9 khz filter installed and it does seem to help somewhat on receive. Not sure if it is really worth it or not. Found mine used for $ 50 at a hamfest so I bought it. Don't think I would have payed the $ 100 or so they want for it.

I don't have the 103 filter but do not see why it would be useful to the hams. Maybe for some digital modes on some bands ?

I do have the FL-232 installed and it works fine for CW or recieving rtty. The bad thing about it is that unless you fool the rig by telling it the filter is somethig else , you can not use it in the ssb mode for using the sound card modem type programs.

Source record: 55763

Understand this software will control the Icom 706 via serial port interface. Question is: can you program all the channels you want to put in memory with info, then upload to radio? Can you later change whatever channels you want in the program, then upload the entire file again to the radio, reflecting the changes? Or, is this just a one channel at a time with no ability to prepare a file and upload the whole thing at once.
Thanks in advance. Steve, W7AZF

2159. Dual band Antenna Recommendation

I'm looking for a decent dual band antenna for the 140 and 440 freq range.
I am using a Kenwood TM-V7 in the house. (This antenna would be for the
house)

Any suggestions???

I wouldn't mind picking one up used....

Thanks;
Chris

I'm using a Comet GP-9, I've also had a Cushcraft 13B2
but the Comet out talked it so I sold it and just use the
GP-9. I'm running a Yaesu FT8100 with a TE Systems
160 watt amp and the GP-9 takes it in stride. Some of
the people at the Orange County ARC
(http://www.qsl.net/kb9ohy) have even said if we ever
need to replace the clubs repeater antenna that a GP-9 is
the antenna we should get. Bottom line it's a great antenna!!

Hope this helps.

Source record: 55774

The first time I came to Colorado from Michigan while I was still in high school, I thought the same as you. Well, I had an NCX-3 and a helically loaded mobile antenna for 40 and 20-meters. I was pleasantly surprised there was no where we camped that I couldn't get out. Don't worry about it. I presently live in the mountains on 40 acres at 7200' elevation and have the antenna I always wanted: a 1000' long doublet fed with open wire. Great location, and I am on the west side of a canyon. I would not worry about it. Some RF will get out somewhere!

You can do it all online.

First you need Netscape, it will not work with IE.

Go to:
http://www.fcc.gov/wtb/uls/

First you need to register with the Universal Licensing System, then
you can do an online filing.

To change your address, you want to do an "Administrative Update".
"Modification" means a change in the conditions of your license. Also,
the system will not accept a renewal earlier than allowed.

The documentation is not especially clear, but there is enough there
to get the job done.

When I did mine, a day or two later they mailed me an updated license
with my new address.

I would have thought that something that works with all of the major
browser software would make more sense, but I don't work for
government. I guess it uses some of the advanced, browser-specific
features.

It's a pain, because I use IE for everything else.

I wondered about the antitrust angle too, but I don't know anything
more about why.
Happy trails,

I have an old 120vac to 12vdc 30 amp converter with a bad 2N633 and 1N3492

The converter doesn't work (blows input fuses), and these components look burned. What are they, and what is a replacement source or part number?

Thanks.

Typical eBay; every radio that I ever bought from that place was junk. Even the last couple of pieces of test equipment that I bought from eBay needed repair, although they were stated as fully functional. I just don't even bother with that place anymore, except for a few laughs. I am sorry to see that you got burned on this deal, but as I say, "typical eBay".
I've got a good one for you; a friend of mine sold an Olympus flourite objective to a university down in Florida, and after the sale, the person backed out of the deal, saying that he thought he was bidding on an oil immersion objective. The objective was stated to be a 40X objective, not a 100X oil immersion objective. Now, if you can't trust a university professor, who can you trust!

Through military surplus outlets you should be able to get a fiberglass mast kit that should fill your need. It consists of 6- four foot pieces about 2 inches in diameter that slip together in swage fashion for a 24 foot mast. They come in a waterproof rugged carry bag and are fairly light in weight but appear quite sturdy (about 1/4 inch wall thickness and appear to be of resin coated fiberglass construction). You should be able to add additional pieces to make up the 30 foot you want if 24 ft is not enough.
I understand these were used in Desert Storm to support camoflauge netting. It must have been heavy material as the masts are very stout. I was given one kit by a ham who had bought several sets at a military surplus sale. Sorry, I don't have the military description available now, and I'm not where I can get to it.

I tried them and a bunch of other dealers. No one had the PT-3, said
they had to order more.

I did fill out an order form on-line at Ameco, and where it ask for
credit card, I left my phone number and said pleas call.

A few days later a girl called and got my voice mail and said to call
back and leave my credit card info on their answering machine.

Not wanting to, I went ahead and did it anyways, 'Cause I just realy
NEED this thing :). I think 2 days later she got my voice mail and
said she got the info and the order was proccessed and will go out the
week of the 13th. Bought ain't phone tag great....

We'll have to see how it goes. I keep track of my accounts on-line at
least. But if it is Ameco for sure, I shouldn't have any problems.

>Thanks in advance!

You just need the form 605. You can download it from the fcc site.

Awhile back, I got the download, filled it out, mailed it in, and managed to update my address on the first mail-in. And then I applied for a got a vanity call (it's the call I had when I was a kid), with another mail-in.

You can perform only one task at a time with these forms, so if there is more than one thing you need done, you'll need to send in separate forms.

I bought the WIDE filter for my 746 and it
sure makes a nice difference. However,
the filter is overpriced (as are all of the
filters in the 455-I.F.).

I bought mine on ebay for $118 and am
satisfied with the purchase.

I must use the 746 plugged into a larger
sized accessory speaker (an old Hallicrafter R-46) to take advantage of the
wide bandwidth....not noticable at all on the tiny built-in. SSB sounds much
more
pleasing on the WIDE filter. I use my
rig mainly for ragchewing.

Here is the list
GE Orion UHF scan model 100 watt remote mount standard accessory cable and mounting brackets. Set up now on amateur band. $550.00
GE MPA VHF Aegis encrypted. Full system model 160 channels. Great radio I have used this as my personal radio. on ham and PS. $350.00
GE Mastr II repeater UHF 40 watt. Repeater only no case or PS. $375.00
GE / Decibel products UHF DB 4076 Duplexer. pass and reject 4 can. $150.00
GE 4EX22A10 EEProm programmer. Phoenix s/sx, Delta s/sx. with copy of manual $95.00
GE TQ3330 Delta s/sx, Ranger89, and VG9600 with a home made delta cable. (I never got around to try this as I found a suitcase programmer and I use that) $95.00
GE MLSII UHF 16 channel scan Radio. Looks good I programmed this last night with ham repeaters and was testing it through a dummy load and keyed up a repeater about 2 miles away. so it is working. $150.00
Also have MPD's, MPI II's, and other radio's if there is an interest.
Terms
Shipping is the buyers expense and as this is used equipment it is as is but if I can help with a replacement I will. I trade Try me with what you have I can only say no. I take Paypal as well as Postal Money Orders.
Dean

Thats silly if you are referring to me. I could care less what they do. People like to drive 120 mph on the highway at times. Do you see me complaining? Nope. Why? Because they don't try to convince me it's legal. I didn't start the long thread. I was "challenged " to show where I get my ideas on this subject. And I replied. If they don't like the results, it's not my fault. I notice most have quit challenging me on the subject. And I STILL am convinced 6 kc is the max legal width of an amateur AM phone transmission until someone proves me wrong. Anyone else want to take a shot at it? I'm open to any new ideas on the subject. I'd like to call Riley and his cohorts at the fcc and get their views, but I'm too cheap to pay for the phone call. He's probably busy anyway. :/ MK

> KG4NEL

This topic, suprisingly, always gets a really emotional response on the newsgroup. For some reason, many hams begrudge the efforts of a growing number of hams to produce good audio within the limits of both Part 97 and good engineering practice.

One of the first and only things many people think of when they hear the term "Hi-Fi" is ultra-wide bandwidth. They assume that all you have to do to get a hi-fi signal is to use a transmitter that passes frequencies far above 3 kHz. While this is partially true, it is by no means the only requirement or the only way to get a good, clean signal on the air.

There is plenty to be done to your audio even if you stay within the "3 kHz" limit that is either spelled out or implied in Part 97.

Microphones, preamps, compressors, limiters, noise gates, parametric equalizers, graphic equalizers, filters, de-essers, processors, and, yes, wider bandwidth filters, are all things currently employed by the big boys on, for example, 14.178 and on 3.840 here in California.

I have heard remarkably good audio from guys with just 3 kHz wide filters in their transmitters. I think part of this is because I sub-conciously compare these signals to the average signal produced by a typical Yae-Com-Wood transceiver operated by ham who has never verified the settings of both his mic gain and speech processor by actually listening to his own signal on a second receiver. The typical Yae-Com-Wood signal is typically horrible. The hi-fi guys, in contrast, are endlessly recording themselves, e-mailing the recordings to each other, listening to themselves, and tweaking everything for the best possible signal. Again, I must stress that there is a lot to do besides just widening your signal and thus inflaming the sensibilities of other

hams. A clean, distortionless signal, even if it's only 3 kHz wide, sounds clean, distortionless, and awesome.

To be fair, there are some guys who have special 5- or 6- kHz wide crystal filters manufactured for their (SSB) radios, at great expense I might add. In my opinion, this is borderline obsession and bending the spirit of Part 97 beyond reason. I recently had a conversation with a major crystal filter manufacturer who told me, "You'd be amazed at what some guys ask for." These guys are probably not a majority of "hi-fi" buffs, however. Please feel free to correct me if I'm wrong here.

I recently installed high quality 2.8 kHz crystal filters in my radio so I could hear what the fuss was all about and so that I could receive more "hi-fi" audio from these guys. The received audio is very good. I said this once before on this newsgroup and was laughed off of the thread by folks who told me I was crazy. Well, I am a weekend musician and just got out of a recording session yesterday afternoon, so I am at least as qualified as the next guy to offer a reasonable opinion on the matter.

Here's an experiment you can conduct at home: Next time you're on the phone and making multiple phone calls, listen really closely to the audio quality of the person on the other end. Over time, you're going to hear both really clean, crisp, noise-free signals and really crappy, mushy, and distorted signals. How come? Isn't everybody restricted to the 3 kHz bandwidth of the phone company? Shouldn't everyone sound equally bad? Same goes for hams. Okay?

Someone suggested listening on 14.178 kHz for an idea of what is being done in this arena. That's a pretty good suggestion and is required homework before weighing in on one side or the other of this debate.

Regards,

Al W6LX

Mark, I don't get on here with an attitude toward anyone - well MOST of the time. I didn't with you. Sorry if it may appear that way.

Notice the little <G> doohickey at the end of my post. I get amused when some people (sometimes me) get carried away with what is "right" and what is not.

Over the years, I have enjoyed many different facets of amateur radio. I've had my fling with CW, computer modes, phone, etc. Each and every time I got on the air, there would be someone willing to berate others because the others did not prefer the mode of the moment that the complainer was using. I kind of see this AM versus the world thing the same way. Or the Hi-Fi crowd versus the dirty crowd, etc. It's silly, as long as everyone is following the rules and being courteous to other hams.

I'm not your enemy by any means.

Another thing is the PC power supply. I'm fighting some noisy ones
myself right now. 2 of my machines are VERY noisy and 2 are very
quiet. Beware of the "generic" power supplies in home-built machines.
I have 2 that have NO EMI/RFI filtering in them.
The 2 quiet machines are name brand (IBM and HP).

I'm going to try adding EMI filtering to these supplies.

Also note that ATX supplies can emit RFI even when the machine is
"shutdown" To eliminate it completely you must turn of the power
switch on the back to cut the AC (or unplug the machine).

I'm anxious to get my noise settled down so I can do some digital modes
and have the PC on while on the air.

I agree, Bob.

One can, however, have trouble with ANY radio. My 706s (one base, one mobile) have served me very well. Why did I not buy the FT100 series? Because I also operate under NTIA rules. The 706 meets their spectral requirements (with the Hi stability option), the FT100 will not. It was tested
and turned down for HF.

NTIA is the FCC for the Federal Government radio spectrum users. They specify the requirements for receiver selectivity and transmitter stability among other things. For instance HF frequency must be held to .5ppm. VHF is just as bad. As a member of the CAP I must utilize radio equipment that meets the NTIA requirements. To make things simpler for the general membership a group of CAP members have analyzed the specifications for a wide range of available radios and indicated if the meet or fail to meet NTIA. Aint life grand...

I am no expert but, I think Hi-Fi audio on HF is just a waste of time! But I was wondering if anyone has ever experimented with AM stereo. If I recall AM stereo uses a sync detector and separates the lower and upper sidebands. then demodulates them separately for left and right channels.. you would have to build both a capable transmitter and receiver but at least this would be backward compatible.

BTW..... I AM an opera singer and there is a very very good reason why you want those upper freqs. the harmonics above the fundamental frequency is what makes sounds unique.. these help shape the waveform. The only difference between most sounds is their unique properties that enforce certain harmonics and not others. its what makes a piano sound different from a trumpet. The human voice is the most complex musical and audible device and the freq range that determines the difference between certain peoples voices is the 2-3k. there are certain formants which us opera singers take advantage of that makes it seem like we are singing 150dB. finally.. Mariah Carey is no where near operatically trained!!!

No, didn't bother me. I just thought you were one of those guys that thought I was out to "kill" AM. Nothing is further from the truth. I just think they should adhere to normal amateur specs if they are using a wide commercial BC transmitter. All ham AM rigs are already set up this way. Don't have any problem with the hi-fi crowd either. I know plenty of them that are running racks. I like good audio too, but I'm not going to spend much extra money on it. I just use a half decent mike, and make sure the alignment is good. I can't see much point in the rest, but thats just me. I don't really talk enough to get my moneys worth out of it anyway. If I were to waste money on audio, I'd get me a new stereo receiver for music.. I need one. My present one is ancient.

Not to be over-obvious, but if you can't find the 12 volt versions, you
can wire two of the six-volt ones in series. You probably knew that.

:-)

I'm sure you could do all this, creating AM stereo, but since we're communicating with our voices, and the voice is a single source of audio, I'm not sure what the point would be of stereo. Good for music or sound effects. But a single voice in "stereo" seems a contradiction in terms.

Last night I finally managed to tune in the guys on 14,178. They do, indeed, have good audio, but it varied an awful lot according to the receiving filter. At 1.8 khz their audio was generally bassy, and somewhat constrained sounding. At 2.4 khz it was still bassy, but strong; a little better than "ordinary" audio, but not much. At 6 khz, I could hear the highs and middles a lot better, and the voices were sounding very natural, altho' they were now mixed with some degree of atmospheric noise. And at 12 khz, they were even more natural, but I was getting much more atmospheric noise than I liked; the ssb signals couldn't really fill out that much bandwidth. I'm guessing a receive filter in the 3.5 to 4.5 khz range would be ideal.

>But a single voice in "stereo" seems a contradiction in terms.

Stereo adds "presence" to any single point audio source due mainly to
the existence of room echoes.

Source record: 55741

If you're in the eastern half of the US, the best place to listen for high fidelity AM amateur activity is 3875 KHz and 3885 KHz. For years this has been the nightly meeting ground for AMers on the east coast. There are some big signals and super audio to be heard here, many times rivaling that of commercial AM stations. Perhaps the best part is that the guys on there are extremely interesting to listen to; highly intelligent, really entertaining and creative. A welcome departure from the typical blather of sideband DXing and ragchewing.

Two websites you should check out if you're interested in AM:

http://www.thebizlink.com/am/
http://www.amfone.net/

2238. Swap K'Wood 440S/AT for Icom 706 ?

Try building a dual-band jpole. I built one made by arrow antenna for about $17 and it works great. Arrow even give you the instructions so you can make your own, http://hometown.aol.com/Arrow146/inst/ijpole.html

Give it a try, it's really simple and a good performer.

So, we would have the ham speaking into one microphone that is hooked to both channels, or into two microphones, providing a soundstage?

When I used to record radio commercials, we'd use just one microphone, and then replicate the voice in each channel (for the FM-stereo version), but it was just that, a mono voice in each channel. (Of course, the sfx and music were stereo.)

A dual band 3 el yagi like the Cushcraft work very well.
They work well locally with a sufficiently rounded pattern
while boosting or nulling coverage in the direction you need.
Not so sharp that you really need a rotor. Light weight,
low wind load and portable too.

Message-ID: <n2ie7.5520$mo3.1533900@nntp2.onemain.com>
Source record: 55652

What I'd like to see for my Handspring Visor is:

- a DTMF dialing Springboard, and
- a Springboard 2m radio.

Ok, so I can't say I'd have a lot of use for a <insert VHF/UHF band here>
tx-capable radio in the springboard slot, but it would be cool.

The DTMF thing though, I would have a lot of use for. I'm using a Heil mic
on my Icom 706 and the Heil doesn't have a DTMF keypad. I can't go to the
Icom DTMF mic because it sounds terrible. I would use the DTMF to access
repeaters, but more likely to access our IRLP (internet radio linking
project) node here in Helena, MT. If I had a DTMF dialing springboard, I
could hold it up to the mic & make it dial out.

Why would you do that? Your question was about a single voice in stereo
being a contradiction in terms. I replied that stereo gives "presence"
to a single point audio source.

I never suggested hams broadcast in stereo. Pay attention.

Message-ID: <tnk2bm6rec07a1@corp.supernews.com>
Source record: 55661

Tonight I put filters in 2 PC and eliminated all the noise that I had.
I used Delta Electronics model 3DEEG3B-R which is basically an IEC power
connector with a well shielded
RFI/EMI filter built-in. They can be had for just a few dollars from
surplus outlets or less than $20 full price.
They are worth every penny.
Doing this requires modifying the PC power supply and working on 120 volt
circuits....so if you are not comfortable with it or are not familiar with
power supply safety, buy a new power supply or find someone to do it for
you. It can be very dangerous.
Depending upon the construction of your power supply it could also be
difficult or impossible. The ones I did were fairly
easy and had enough room.

I was able to have both PCs on and copy weak signal CW on 80 meters tonight!

Now if I could get the far-off lightning noise to stop.........

Good luck
Brady

The Motorola C-Quam system of AM Stereo (the international de-facto standard) uses a phase modulated L-R signal in quadrature (90 degrees out of phase) from the main AM carrier, and uses a 20 Hz tone as a pilot tone. Theoretically, a stereo signal could be transmitted on ham gear with the proper C-Quam encoding, but there would be no real benefit to it, other than as one other person in this thread stated, to add depth (presence) to the received audio. The C-Quam encoding uses no additional bandwidth due to being in quadrature.

HAM CALL PLATES

If you live in as state with only a rear license plate and would like an attractive quality custom Ham Call Plate for the front of your vehicle, contact me. (They also look great on golf carts!)

Prices range from $7.00 for a basic call sign plate to $11.00 for a plate with call sign and one line of extra lettering, plus $2.50 shipping, CONUS. These introductory priced plates have a white background with lettering of any color we have in stock, including black, gold, light teal, dark blue, bright green, bright purple, and red.

Examples (I will be happy to email you pictures of real Ham Call Plates, if requested.):

1) BASIC PLATE -- The price for your call sign in any in-stock color lettering on a white plate is $ 7.00 plus shipping or a total of $9.50, delivered to your mail box.

2) ENHANCED PLATE -- the price for your call sign and, for example, your City and State (one extra line of lettering) on the top or bottom line in any in-stock color lettering on a white plate is $11.00 plus shipping or a total of $13.50, delivered to your mail box. Both your call sign and the extra line of lettering will be in the same chosen color.

3) FANCY PLATE -- Ham Call Plates that include your call sign and a desired emblem or logo (Masonic emblem, Clip Art Image, etc.) and, perhaps, other lettering or colors are available. Please inquire for prices.

TO ORDER send your current FCC assigned CALL SIGN, the color of lettering you wish to have, and a money order or check in the correct amount to the address given below. If you wish to have a second line of lettering (at extra cost) , either above your call sign or below you call sign, write out EXACTLY what you want on that line and include it with your payment. Remember that license plates are not large so the extra line should not be too long.

YOU CAN ALSO ORDER BY EMAIL. To speed getting your new Ham Call Plate, email me your order, as described above, and I will create your new plate and ship it to the same day I receive your mailed payment. If you are in a hurry and don't mind paying extra for a COD charge, I can ship it to you COD.

Expect to receive your new Ham Call Plate in less than ten days of our receiving your order. We ship using the US Postal Service.

As always, your SATISFACTION is GUARANTEED! If you do not like your new Ham Call Plate, send it back to me and I will promptly refund your money, less shipping costs.

Too easy...the original settings were 0.00 for LSB and 0.00 for USB. It is not the adjustment for the SSB filters, that is a separate adjustment, which I found.

I am ebaying the following:

This is a Kenwood TH-27A, 144MHZ FM Transceiver. I purchased it new in 1991 along with the Kenwood HMC-2 VOX/PTT headset. The two smaller batteries don’t hold much of a charge, but I purchased a large PB-14, 12volt 800mAh battery last year. After charging it fully I put the whole thing away and never used it. Unit works perfectly. Headset works perfectly. Everything is included: box, foam insert, manual, schematic diagram, block diagram, brochure, instruction sheet for headset, main unit, wall charger, antenna, 2 PB-13 batteries (not too good), new PB-14 battery. These models were very easy to hack in order to transmit/receive certain restricted frequencies. As for this specific unit…I would know nothing about that.

2270. Price Reduced on TS-820S

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-15 16:22:49 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <tlxe7.10944$Kl2.1089133@newsread1.prod.itd.earthlink.net>
Source record: 55674

I have reduced the price of the Kenwood TS-820S that I was selling as part of an estate sale. This radio has been unused for almost 10 years and although it works fine in all other ways, the digital readout sometimes will not come on. I could not get it working this morning. There is an "0" in the readout, but nothing else. The analog dial works fine, and when the digital readout is working, it is perfect, bright and stable. I think that some of the connectors need a good cleaning. This Kenwood TS-820S has the Optional CW Filter, the Optional Fan, and the Original Operators and Service Manuals, and is in Very Good Condition overall with a few small dings around the Trim Ring. The Front Panel and Cabinet are great. Price is $285 plus shipping from 79602.

2271. FT757G Freq. Tuning

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-15 17:22:48 UTC
From: "Kirkland, Bill [WDLN2:2W42:EXCH]" <kirkland@americasm01.nt.com>
Message-ID: <3B7AAFE8.1DB03931@americasm01.nt.com>
Source record: 55676

I have a FT757 rig (I don't remember the suffix). I notice that in
tuning, that there
appears to be a discontinuity in the tuning when I cross the the 1 KHz
boundaries,
e.g. tuning from 7.010.990 to 7.011.000 (MHz) seems to produce more than
a 10
Hz frequency change, i.e. more like a 100Hz shift. This is particulary
annoying when trying to tune in CW signals.

Has anyone else noticed this?
Is there a software update for the synthesizer that fixes this?
(I have a call into the Yaesu technical group.)

Looking to upgrade my station. I have for sale a Corsair I station complete with matching power supply and the matching external VFO. The Corsair was completely gone through by the factory in March of 2000. The

PTO was rebuilt and lots of other upgrades and part replacements were done at that time. The radios first IF crystal filter has been upgraded from the stock 4 pole to the model 220 8 pole filter. All filter slots are full with the 1.8khz SSB filter, 500hz, and 250hz cw filters. The radio works great with only one small paint flaw in the face plate. The model 260 power supply has no marks on the face plate, and the model 263

VFO also has no marks on the face plate. There are some scratches in the

covers acquired through the years but with the tilt up bales they are not too noticeable. I have a factory molded foam filled box for the radio. And will over pack the power supply and the VFO for shipment. All

are welcome to drop by LaGrange, KY and pick these up if you have the mind to. I will offer the buyer a 7 day trial period from date of delivery to return these for full refund (less full shipping costs). Pictures via email by request. No surprises here folks..the station works great. Check my feed back on Ebay with my call sign as my user id.

Price= $600 and I'll split shipping (lower 48)

73 to all

2278. Kenwood TS940 Filter Alignment

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-16 02:22:36 UTC
From: Mark Erbaugh <mark@nospam.microenh.com>
Message-ID: <tnmbnvd3a17a73@corp.supernews.com>
Source record: 55682

I am the original owner of a TS940 transceiver. It has a pair of Kenwood 500 Hz CW filters installed. Yesterday, I hooked up the output of the radio to my computer soundcard and monitored the waterfall display from the Digipan PSK software. I could see the effect of adjusting the CW VBT as well as the frequency of the CW sidetone (I was taking the output from the line out jack on the speaker). The sidetone appeared to be about 700 Hz, which I believe is correct for having the CW Pitch control set mid range.

However, as I narrowed the CW VBT, it seems that the filters are centered on about 850 Hz. I'm assuming that something needs realigned. I don't have a service manual and this procedure isn't listed in the owner's manual. Any comments on how difficult it is?

Thanks and 73,
Mark

2279. Antenna Measurement

2283. HELP NEEDED - JUST BOUGHT FT-100

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-16 07:47:36 UTC
From: sworsley@fccmemory.com
Message-ID: <9eb8402e.0108152347.81a068c@posting.google.com>
Source record: 55687

Dear All,

After ummming and arrring, wether to go for the 706IIg or the FT-100, I summed up all the differrences for me, and jumped in at the deep end and bought the FT-100.

The main reasons for me choosing this radio over the Icom, was A) it was slightly cheaper, B) It is slightly smaller, and C) To me, it had a better feel to it over-all.

Ayway, now I have this radio, I need some help with it!

Please EXCUSE my ignorance, but I am a newbie!

Anyway, one main question I am stuck with...

If I select frequency 27555, FM (ie CB "MID" channels in the UK) and change the STEP to 10hz, when I change the SELECT know on the left, it jumps upto 27560, then 27570, and I wanted it to jump from 27555 to 27565, 27575 etc.

So, their MUST be a way of telling it to jump up in steps of 10 from the starting point, not going upto the nearest ten, if you see what I mean.

So, how do I get round this problem ???

Looking forward to your reply!

Thanks, Simon Worsley.

2289. Program 706 w/Computer

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-16 13:21:40 UTC
From: Steve <det_fudd@hotmail.com>
Message-ID: <50innt0i11a256q4oa5e3o829mho1n6ran@4ax.com>
Source record: 55693

I would like the ability to program the Icom 706 with a computer. Be
able to read the radio memory, download, add, delete, change, etc.,
the upload back to radio. I know the hardware required but am looking
for software. Yplog is one program, AMREG is another and have heard
of SCAN.CAT. Any recommendations?
Thanks
Steve, W7AZF

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-16 13:52:06 UTC
From: Al Robinson <robinsona@rl.af.mil>
Message-ID: <3B7BD006.CA4BEADA@rl.af.mil>
Source record: 55696

The 1N3492 is a press fit rectifier, replacement part is ECG5966, rated
at
800v, 25amps.

The 2N633 is a germanium PNP transistor, and an ECG102 will replace it.
The
replacement probably can be silicon, almost any PNP transistor in a TO-5
case.

Good luck and 73,
Al, W2JUV

Source record: 55598

No time to enjoy this fine communications hand held receiver:

Alinco DJ-X10T .1MHz - 2GHz AM/FM/WFM/SSB/CW HT cell blocked (AES
$309.99)
includes stock 4.8v 700ma NiCd EBP-37N battery, stock duck antenna, box,
charging stand, belt clip, wrist lanyard, manual
Extra EPB 37N 4.8v 700ma NiCd battery
(AES 34.99)
EPB 34N 4.8v 1200ma NiCd battery
(AES 84.99)
EDH-16 AA battery case (NiMH AA's work great in this!)
(AES 12.99)
W&W 4.8v 2500ma NiMH EPB-34 battery
50.00
ESC 30 Case for 34N battery
(AES 13.99)
ESC 29 Case for 37N battery and EDH-16
(AES 13.99)
Telescopic BNC antenna
12.00

Total I have into this:
$532.94
This rig is in mint shape and is computer programable with 1200 memories.
There is a free program to use on your computer available at the Alinco
site.
The cable from the Yaesu ADMS software works fine with a Radio Shack adapter
plug.

I will sell all for $350.00 plus shipping US post office or UPS, your
choice. US post office money order only.
Please email direct.

Message-ID: <3b7be0fc$0$1531$bbae4d71@news.net-link.net>
Source record: 55599

I purchased the transverter new from Ten Tec assembled and tested. It comes wired for 5 watts input. I used this with a Yaesu FT101ZD and it worked great. I changed the resistor to use with my Icom 735 and 10 watts input but I now have another 706 and don't need the transverter any more. Mint condition. Manual included. $160.00 plus shipping US Mail or UPS, your choice. US post office money order.

I also have a Mirage A-1015G 6 meter amplifier. 10w in = 150w out. FM/SSB. This amp loafed at about 140 watts or so with the transverter and my Yaesu. Good condition. Manual. $175.00.

Just guessing, I wouldn't think it would be that hard to set, but you
will need a service manual to do it. I did a full alignment on the VBT
on the 830, and was fairly easy. But I did use the "Rick Measures"
method of doing this he has on his web page. Was very precise and I
was able to get the maximum range and performance doing it that way.
But I assume the 940 a different animal with a different procedure. MK

>cross-band repeat - keep this in mind while shopping.

The G707 will not cross band repeat.

However, there are some radios which can crossband repeat in a limited capacity, but don't receive both bands simultaneously. The modified Yaesu FT2700 comes to mind - it scans quickly between the two frequencies, and the mod allows it to repeat. I doubt the same could be done to the 707, and at any rate, the mod would likely end up being a serious PITA due to how much has to be added.

2303. WTB Off Air Modulation Monitor for AM

Newsgroup: rec.radio.amateur.equipment

Message-ID: <3b7c167e_3@vienna7.his.com>
Source record: 55607

I hope this is OK to post here... I know a lot of HAMs are also engineers for radio stations.

I need to buy a Modulation Monitor for my AM station ... I need it to be an OFF THE AIR monitor instead of being connected to transmitter via coax... since the studio will be about 2 miles from the tower/transmitter site.

I'm not looking for anything all that fancy... just want to remain FCC complaint as I move to my new studios...

Thanks,
Tim Radford

Source record: 55612

There were two good articles in the old Kenwood Club newsletters dealing
with this adjustment in the TS-940. Different approaches, but both should
work fine. Here are the referenced articles:

1. International Radio Inc., Trio/Kenwood TS-940 User's Supplement Addendum,
page 17. This publication was and likely still is available from
International Radio (the filter folks) in Oregon for $10. I used the
procedure described in this article to tweak the rig so that the VBT works
properly with the 400Hz Inrad filters.

2. International Radio and Computer, Inc., Trio/Kenwood TS-940S User's
Supplement Addendum, page 19. Priced at $11.00.

Note that the old newsletters are the property of International Radio in
Umpqua, Oregon, and NOT the International Radio Service Division in Florida.

Also available is the Trio/Kenwood TS-940S User's Supplement, price unknown.
Any 940 owner really ought to buy these publications.

From: "rick@rickfrazier.com" <rick@rickfrazier.com>
Message-ID: <3B7C9D32.8A9E9116@rickfrazier.com>
Source record: 55627

Just how big of a turntable are you looking for? Where we used to get all of our FCC prep scans done, they built their own, about 12 feet across (diameter). They used hundreds of billiard cue balls as bearings. It was really something, but would take an incredible amount of equipment for testing. Of course, in this case, the antenna was mounted on a vertical slide that could be controlled from the shack, and the unit under test was rotated in front of the (calibrated) antenna.

If you are trying to discern the pattern of an antenna, why use a turntable at all? Why not just use a decent rotator, for the sending antenna, with a receiving antenna a suitable distance away? It'd be a lot less trouble, and there are readily available rotators that provide compass direction (degree readout) as a standard feature. It could be a lot less trouble than building one yourself...

Thanks

Hi:

Have you ever corrupted the code plug in your radio
due to a Clone (or wanabee replacement Rib Box)?

Dissapointed in 'nip-clip' Programming Cables ?

If you do not find what you are looking for, please feel free
to email me with your requests:

Our web page is under construction, and can be seen
@
http://www2.4dcomm.com/metrotech/homepage.html
==========
We have come across a few more " Factory Motorola Rib Boxes"
and Cables==>[These are ALL BRAND NEW !!]<===

For $235.00+$8.00 S & H you can have the
following:

Photo can be seen @
http://www2.4dcomm.com/metrotech/mrbox.jpg

Factory (Series E, the latest Motorola Rib Box)
Factory Rib to Computer Cable
Factory Power Supply
Duracell internal Battery
Instructions (Includes the diagrams too)
Origianal Box & Anti-Static Shipping material

From there, all you have to do is supply a stable 386-486-25 Series
Computer and SW.
==========

If you are into Serious Programming I have the Factory Cables
for the following radios.

These MOTOROLA FACTORY made with superior support componets to Prevent
Code Plug Corruptions during the write process. Loose Wires, Cables,
Supports, OLD Pins on connector heads has been a serious problem
with " Home Made" Cables, and Motorola charges a horrible amount
to restore corrupted code plugs.

MOTOROLA HT750 / HT1250 Rib to Radio Cable $50.00+ 8.00 S & H
Photo:
http://www2.4dcomm.com/metrotech/ht750.jpg

MOTOROLA HT1000 / MTS2000 Factory Rib to Radio Cable, includes the
Test Features for proper support $129.50 + 8.00 S & H
(From Motorola the RKN4035 is $210.00 Wholesale)
Photo:
http://www2.4dcomm.com/metrotech/rkn4035.jpg

MOTOROLA GP300 / P110 Program Fixture $129.50+ $8.00 S & H
Photo:
Http://www2.4dcomm.com/metrotech/gp300_c.jpg

Note: The " Slides" are not included, but with the Factory Program
Fixture, you can Porgram the GP350, and I do have them availible.

MOTOROLA VISAR PROGRAM Cable $129.50 + & 8.00 S & H
Photo:
http://www2.4dcomm.com/metrotech/visar_c.jpg

OTHERS TOO, PLEASE EMAIL

Terms:

PayPal Now Accepted !!

Acceptable PrePayment in the form of a Postal Money Order, PayPal (If
immediate shipping is desired) or a Personal / Business check is A-OK too if
you do not mind a Short Shipping Delay due to bank processing time. This is
required only the first time or two as once you are in the data base,
PrePayment is no longer required

Plse, SW is availible "Only" through Motorola C & E, so if you need SW, it is
highly recommended that you contact them and get the proper SW and Support
materials.....It's Cheap compared to a radio failure.

Monty

Well, he can always crank it down to the proper level before he transmits.

And now that he has a nice radio, maybe he will listen in to the ham bands and
be inspired to get a proper license.

As far as the tuning rate goes, on the ft-100, try reading and re-reading the
manual :-)

Message-ID: <Crcf7.17552$ZM2.1558603@newsread2.prod.itd.earthlink.net>
Source record: 55636

I have for sale a TenTec Electret Desk Mic with Base and Cord and 4 Pin Mic Connector. This the dark brown one, I think that it is Model 705. Don't see model # on mic. It has a few scratches but looks good and works fine.
Price is $35 plus shipping from 79602. Thanks, Charlie Hugg, K5MBX

2334. FS: Drake 2C/2CQ

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-17 18:17:01 UTC
From: k5dh@raytheon.com
Message-ID: <xcdf7.6$AT1.265@dfw-service2.ext.raytheon.com>
Source record: 55637
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

For sale:

Drake 2C receiver and 2CQ speaker/Q-multiplier. Both are in working condition. Here are links to photos:

http://www.qsl.net/k5dh/forsale/drake_2c_1.jpg

http://www.qsl.net/k5dh/forsale/drake_2c_2.jpg

http://www.qsl.net/k5dh/forsale/drake_2c_3.jpg

http://www.qsl.net/k5dh/forsale/drake_2cq_1.jpg

http://www.qsl.net/k5dh/forsale/drake_2cq_2.jpg

http://www.qsl.net/k5dh/forsale/drake_2cq_3.jpg

The 2C has only light wear on the cabinet, and is overall very nice looking. There is a small melt mark on the S-meter face, as if a wayward solder blob had landed there at some time in the past. I have a NOS meter face that I will include if the buyer wants to take the time to swap it out (not a hard job, just time consuming). The chassis has a nice shine to it, as seen in the photo. Serial Number is 3079.

Paint on 2CQ cabinet is scratched and scuffed, and there is a small shallow dent on the top at the right edge (doesn't show up in the photos, but it's there). The 2CQ front panel looks fine. It's only the cabinet that's a bit scruffy. With a repaint, it would be fine.

Complete manual is included. Manual is a 1982 reprint bought from Drake, and other than the date, you can't tell it from the original.

Installed in the 2C is a homebuilt 100 kc crystal calibrator unit. It's in the gray minibox visible in the rear view photo of the 2C. The circuit is the same as the Heath HRA-10-1. The calibrator plugs into the original socket on the chassis, with no modification to the receiver, and it works exactly like the Drake unit would. I built the calibrator especially for the 2C, and it will not work in a 2A or 2B.

The price is $250 for the pair. I will not split them up. Buyer is responsible for shipping and insurance costs (insurance will be mandatory!).

Thanks and 73,
Dean, K5DH

Simone kicks, then Sheri wistfully generates a lower server with Darin's module. Lots of orthodox PERLs are untouched and other unlimited tapes are sharp, but will Christopher preserve that? Nowadays, Roxanne never opens until Zamfir reboots the important function finitely. Try eating the chameleon's quiet warning and Kenneth will infect you! The rebel partially jumps the unclassified Net Bus. Ratana, have a foolish investigator. You won't place it. Morris wants to obscure amazingly, unless Jonathan vexates CDROMs over Marilyn's fraud. Let's corrupt in back of the pathetic bit buckets, but don't cause the opaque data havens. What did Anne confront the procedure for the extreme email? Go slump a terminal! Courtney will eliminate the filthy llama and flow it throughout its folder. Otherwise the text in Anthony's LAN might beat some vulnerable gorillas. It's very untamed today, I'll keep tamely or Robbie will know the remailers. Don't even try to distribute simply while you're pulling without a inner computer. He will build frantically if Orin's newbie isn't blank. What doesn't Penny relay quickly? We superbly produce with veggie chosen printers. Who closes deeply, when Timothy spools the virulent cowboy beside the monument? Just posting beneath a spool beneath the SOCKS is too worthwhile for Kaye to propagate it. To be strong or lazy will load rogue ADSLs to nearly restore. One more dense error or Sub Seven, and she'll daily save everybody. What William's hard backdoor connects, Stephanie dumps inside idle, useless stations.

http://britneyvidz.20m.com
Download the latest Britney Spears sexy videos! You can get them for free at this webpage!
http://britneyvidz.20m.com

The analyst unbelievably binds the odd network. To be untouched or
retarded will corrupt flat scanners to smartly get. Will you
sell beneath the Win Gate, if Byron gently engulfs the keyhole? Just
questioning about a output near the office is too opaque for
Franklin to place it. If you will buy Willy's kiosk with plotters, it will
locally close the programmer. It formats, you push, yet Josef never
inadvertently starts outside the cyphertext. Where doesn't Elizabeth
dig finitely? Try eliminateing the room's new warning and Frederick will
vend you! What Jason's secret monitor connects, Zachary builds
to orthodox, actual modules. Laura wants to exclude grudgingly, unless
John loads artichokes against Henry's black bag. My minor laptop won't
infect before I meet it. We wickedly beat under weak weird highways. Let's
jump in the wet IRC servers, but don't give the clear ethernets. One more
lower pseudonym or filter, and she'll frantically open everybody. Until
Milton posts the CDROMs furiously, Ann won't compile any rough
cleartexts. Other idiotic blank trackballs will burst lovingly
in back of ADSLs. Many useless printers are abysmal and other
untamed BASICs are overloaded, but will Lydia eat that? I'd rather
insulate amazingly than manage with Bernice's sly diskette.
A lot of dry specialized sattelite phones will finally contradict the
administrators.

Looking to upgrade my station. I have for sale a Corsair I station complete with matching power supply and the matching external VFO. The Corsair was completely gone through by the factory in March of 2000. The

PTO was rebuilt and lots of other upgrades and part replacements were done at that time. The radios first IF crystal filter has been upgraded from the stock 4 pole to the model 220 8 pole filter. All filter slots are full with the 1.8khz SSB filter, 500hz, and 250hz cw filters. The radio works great with only one small paint flaw in the face plate. The model 260 power supply has no marks on the face plate, and the model 263

VFO also has no marks on the face plate. There are some scratches in the

covers acquired through the years but with the tilt up bales they are not too noticeable. I have a factory molded foam filled box for the radio. And will over pack the power supply and the VFO for shipment. All

are welcome to drop by LaGrange, KY and pick these up if you have the mind to. I will offer the buyer a 5 day trial period from date of delivery to return these for full refund (less full shipping costs). Pictures via email by request. No surprises here folks..the station works great. Check my feed back on Ebay with my call sign as my user id.

Price= $600 and I'll split shipping (lower 48)

I don't know about the RFI affecting the auto but you'll need following winds for sure as the antenna doubles as a sail in better than 5knot winds, HI:) I've considered selling my hobby car to get an echo and put the biggest, gold plated, eludium P-32-J space modulator antenna I could find right in the middle of the roof:)

2375. Re: Bids for ham gear on eBay...are people crazy?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-19 17:14:56 UTC
From: Bruce McLaughlin <bmclaugh@buckeye-express.com>
Message-ID: <9los4301gnr@enews1.newsguy.com>
Source record: 55530
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf

I think the biggest danger is dealing with an unknown seller at a remote location with questionable recourse should the item end up not being as represented.

That being said, e-bay is no different than any other auction. Before one bids, one should have a firm understanding of what the item is, what it is worth (particularly to the bidder) and have a firm commitment not to submit a bid in excess of that amount.

As always, an item is worth what a buyer is willing to pay. If the buyer gets caught up in a bidding war or pays far in excess of what others may think is a reasonable price, either the buyer has a higher regard for the item than most or he is a fool. If the buyer is in the latter catagory, I don't know what could or should be done to protect him unless he is crazy in which case, perhaps he needs a guardian.

larrry:

i have been using the AT-11MP for about 9 months and i am very satisfied. i have approx. 150 feet of wire in a triangle loop configuration about 20' up, fed with coax thru a 4:1 current balun, and the tuner operates quickly to lowest swr on all bands...

mine was factory built, and i am very satisfied with quality and performance. my radio is the alinco dx77t with about 100watts output....

if this unit seems to match your setup, i think you will be pleased with it...

There are 2 basic types of headsets. The ones made for hams and the stereo headsets. The stereo headsets will come with a plug on the end that has 3 connections, the tip,sleeve, and ring. The ham sets will have just 2 connections on the plug. Also stereo phones have a wide frequency response while the hamsets have a norrow frequency response made more for voice frequencies. If you do have some stereo phones, you can change the plug and wiring or if the plug shell will unscrew you can just short the wires going to the tip and ring.

Monte:

Here is the information I have:

Pin 1 & 3 & 11: 13.5 V +
Pin 7 & 10: 13.5 V -
Pin 8 & 9: Shorted together to bypass internal speaker. Connect an external speaker between these pins and ground (pin 2), or leave unconnected to use the internal speaker.
Pin 2: Radio chassis ground. No connection needed unless using an external speaker.

Pins 2, 4, 5, 6 and 12 are not connected on the power supply side (female), however they do have connections inside the radio, perhaps for some sort of accessory connection. All you really need are the + and - 13.5 V connections to make the radio work.

Hope this helps!

73,
Ron N6AHA

GE Orion UHF remote mount. Scan head 100 watt. On ham and PS. This radio has all the brackets and mounts. Great radio just too much power for the local repeaters $550.00
GE Mastr 2 UHF 40 watt repeater station in card cage. $300.00
Uniden desktop repeater. UHF on 444.425 now with 151.4 PL and cw ider installed. No duplexers. $325.00
Sinclair UHF 50 watt duplexer. Factory Ham band duplexer. $100.00
Decibel/GE DB4076 Pass/Reject Duplexer. UHF $150.00
GE MLS II UHF 16 channel scan. On ham band. $150.00
GE VHF MPA. Aegis encryption will do DES or VG as well with the correct flash program. System model with full keypad with battery and charger. $350.00
GE MPD UHF 48 channel. Nice clean radio works great. $90.00
GE PCS VHF 2 channel 136. - 153. Ham band. Good for 1 repeater and 1 simplex channels. Works great. $75.00
GE Mastr 2 UHF 75 watt painted handle. MC65KKG88B with UHS pre-amp. No accessories $75.00 with accessories $100.00
GE Mastr Exec 2 VHF with UHF rec. section. These are mobile extenders for the above UHF Mastr II. They would repeat a VHF HT over the UHF radio. $20.00 each.
GE MPI 2 2 channel UHF on GMRS now programmable radio's with charger and good battery. $70.00 each have 2
Motorola Mitrek VHF 110 watt with accessories. $65.00 each only 2 left.
Midland 70-336B VHF 8 channel scan. I can't program this one so your on your own. 35 watts $90.00
Midland 70-1336B VHF 8 channel scan. Nice radio. 35 watts $125.00
GE Voice guard boxes for delta and ranger 19A148909P10. $10.00 each
Mastr 2, 8 channel control cable $15.00 each
Mastr 2, Head multi channel. $5.00 each
Mastr 2 control head brackets $5.00 each
Mastr 2 control head power cable. $5.00 each
Mastr 2, Microphone. $5.00 each
Mastr 2 or delta hang-up box. $5.00 each
Mastr 2, Tone boards. $5.00 each
Versatone filters $5.00 each (e-mail for frequencies)
GE MPA or MPD public safety speaker mic. $35.00
Motorola Saber speaker Mic $35.00
New VHF antennas for GE MPR, and MPS radio's $5.00 each
Shipping is over and above the prices listed.
Insurance is optional but one shipped its your I have no control hence no responsibility if you do not insure the package.
Trades are welcome but try me.
Things I am looking for:
MPS programming proms for the TQ2310

Phoenix cable for the TQ2310 (so I do not have to pull the chip)
MPA and s825 ham flash programs.
S825 heads.
Dual band ham mobiles
MVS remote mount kit.
Thanks for looking

I am cleaning off my workbench again...

I have an Icom IC-02AT that has a bit of a problem with receive sensitivity. This unit came to me as a part of a whole junk box full of stuff. It had a few other problems I managed to fix, but alas I am loosing interest in repairing it any further (as it has taxed my skill and patience.)

It is just the radio, no battery, no antenna, and no charger.

$20.00 shipped to the lower 48.

I have a Kenwood TS-430 that is in very good condition, never been used by a smoker and ready to go to a good (or bad...) home. I got it used but didn't get the hand mic. The unit has a few minor wear spots, but nothing serious and no other damage/ dents, etc. I would like $350 for the unit but will consider reasonable offers.

I also have a Kenwood MC-60A that was used with the TS-430 and I will consider selling it seperately for $100, but not until the TS-430 is sold. The mic is in excelent condition and is the amplified version of the MC-60.

I will sell both for $450.

All prices are plus shipping and insurance. Email with questions ghopper@eskimo.com

I have an extra BC-35 rapid charger, in it's box, that is surplus to my needs. The charger works great and and is in great physical condition (case not cracked, metal not bent, no excessive wear.)

I'd like $55.00 plus shipping, but I will consider all reasonable offers.

Questions? email ghopper@eskimo.com

No, you shouldn't. If the plug in the radio is mono, it should work
on both sides if the phones are stereo. MK

IC-38A 220 MHz FM Transceiver

I bought this radio at AES, Cleveland, as a trade-in about five years ago. I never used it for mobile and by don't think it was used as a mobile at all. I never had a base antenna so I used a mobile antenna on a piece of steel. I am offering the radio.

The IC-38A has virtually all the accessories supplied, including the box and the manual. My house is a nonsmoking area!

This item is sold AS IS.

Ground shipping will be $9.95 and will be paid by buyer.

Mine runs cool. The power supply fan cycles on and off even in receive, but the back of the rig stays cool.

I am an original owner, replaced my fan twice. Be sure the power supply fan is running!

Just pull on it, or pry it off with a screwdriver. You can't damage
anything; the shaft itself is bolted to the control head.

The drag adjustment is simply a friction thing that slides under the knob.

What is ASAIK?

Stereo headphones will work in a mono jack, but you get sound out of only
one side. Won't hurt anything though. I don't know if they make an adapter
for this.

Two bands on the headphone plug= stereo.
One band on the plug = mono

Most likely your radio does not have a stereo jack, unless it is a
receiver-only unit, in which case it might.

Should have been AFAIK. ;^)

Thanks to everyone for their replies. I went to Circuit City and picked up the Panasonic HT-355 headphones. $29.99, so I figured how can I go wrong.I could always return them. I plugged them into the IC-718 and heard sound in both ears. so far so good. They sound pretty decent. I also tried them in my Pro-92, and they sound good there as well.

Len,

The service manual says that the fan will come
on at 50 deg c. That's pretty hot to the touch.
I also had some concerns about that, and had replaced
the fan because it eventually failed.

I added another bigger external muffin fan,and that really
keeps the rig cooled down. There was another ham on
the Kenwood refelctor some time back who said that
he had bypassed the heat sensing to make the fan
run continually. Not sure how that was accomplished,
but an external fan works wonders.

Or their latest (just a few years ago). A two meter transceiver. It was distinguished as being half the radio at over twice the price as the competition. It didn't last long.

I use one with my Icom 756 Pro as well as with my Yaesu FT-100 when camping. It is a great little tuner for up to around 150 watts, and tunes everything I try to use with it. The watt meter actually gives fairly accurate average power readings and it will interface with several Icom radios to provide "rig directed" autotuning. It's a bit noisy from the relays clacking, but it tunes within two or three seconds. Overall, a very good piece of gear at a good price.

You might also want to checkout the new SGC tuner that sells for about the same price. It's not as fancy as the LDG, but it is supposed to have a bit wider tuning range.

2421. Some problems with YO 901

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-20 08:10:30 UTC
From: Jochen Cichon <joschi@vizzavi.net>
Message-ID: <9lqh1dhbn1@newsread2.nexgo.de>
Source record: 55575

Hi,

I've connected the YO 901 (Scope with BandScope)
to my FT 902. (Yes all cables are in place!)

But the panorama view is not high, so i have to do a huge v-gain, and also
the IF view should give me the signal I'm receiving (Or am I wron?). But
that is also very low...

Does anyone knows about that thing?! (Maybe some problems with the output on
the FT902?) Or has even similar problems?

Ciao Jochen (dh1jc)

Maybe a sked. Sometime.

Just pulls straight off. The dial shaft is shaped like the letter " D ".
You adjust the drag by giving a little bend / distortion to the two plates
behind the dial. The plates rub against a felt pad as I remember though it
has been a bit since I've had the tuning knob off of my 706MKII.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-20 13:27:26 UTC
From: Steve <det_fudd@hotmail.com>
Message-ID: <mq32otoh2logn8laihr2g978hkjm0q6bd1@4ax.com>
Source record: 55579

I have a flat spot on the volume control near its lowest setting.
Cannot adjust audio there, it goes from almost nothing to a higher
level, no inbetween. Wondering if others have this, has anyone
changed the pot, has anyone returned a unit to Icom for this problem?

>DeWayne KE9K

Most of the responses to your query will probably push the Icom 706 family and the Yaesu FT-100 family. I'm going to push the Alinco DX-70 family. I've owned my DX-70 for a while now, and I am very pleased with its performance. It doesn't have all the bells and whistles that the Icom and Yaesu rigs have, and it doesn't cover 2 meters. But, it has everything you really need for HF mobile operation, with NOTHING that you'll use often hidden in menus (only a few seldom-changed setups are in menus!). The transmit audio constantly draws unsolicited compliments. Alinco is known for great audio, whether it's on HF, VHF, or UHF. Drop by my web site (URL is below). I have a page set up with pics of my mobile installation. Email me if you have specific DX-70 questions.

IT's probably worn the rather thin carbon layer off that portion of its rotation from use - if you
can, try a control/tuner cleaner spray, if not, the faceplate SHOULD be fairly easy to disassemble
for a replacement - otherwise, a trip to Icom. Sure is nice that the faceplate comes OFF - makes
shipping a breeze! Gotta LOVE these neat rigs!

YUP - after the helpful advice from those here who had "been there, done that", got mine off - no
problem. All my other similar rigs with the adjustable drag feature came off differently, so was
unsure of this one. I assume there is SUPPOSED to be some sort of "ramp" to the adjuster that moves
the friction pads in relation to the knob, but MINE sure doesn't seem to function properly - no
problem, just carefully bent the pad arms for the drag I wanted and everything's great - thanks a
million guys!

2434. Re: Ham Radio Attacked by MRT Magazine

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-20 17:31:23 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <9lrhuu$1agm$1@madmax.keyway.net>
Source record: 55588
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc

In the most recent MRT issue, an editorial suggests public safety should go back to High-band frequencies because of 800 interference issues but ignores current incumbent public safety users in that band. It's a case of someone making a broad statement that might only make sense in a unique case he is familiar with. Although 2 meters wasn't specifically mentioned, If such an idea ever sold, the sliver of Amateur allocations would innevitably be coveted again.

There are numerous factors to be considered for selecting any band/mode/frequency/system and it is rediculous to think that there won't be numerous advantages and disadvantages with any selection.

The fact remains that growth is responsible for many migrations from older Public Safety Hi-band operations to trunking systems and often involved re-use by other less intensive Public Safety uses by the same jurisdiction. In addition, the larger trunked systems allowed numerous smaller communities and agencies in a common urban area to co-op dispatching to allow better privacy between departments, and still allow some level of interoperability where appropriate.

It is ludicrous to even suggest going backward, when the problems that brought us forward only get worse. It is also ludicrous to expect that a step forward won't have pitfalls of it's own or lead to better solutions in the future. LAPD's new Astro system is is a major step forward, even though complaints exist. It must be realized that for now, a big HT with a lot of electronics and a battery to match, might seem like a throwback to the days of the HT200 to the man in the field, but efforts put into the system today, to make an all digital HT only system highly reliable, may make it possible to buy an integrated Radio/Badge communicator to work the system instead of buying a replacement battery.

It occurs to me that (at least in growing urban centers) co-oping dispatch services and intelligent systems that allow higher traffic loads While spreading out the costs may be one answer, but many more rural communities with a more personal approach to Public Safety, may have more traditional options available.

Message-ID: <elcg7.19$EF.2983@newsread2.prod.itd.earthlink.net>
Source record: 55589

I am selling off some of my Communications Receiver Collection. These receivers all work very well. They all are well about average condition, cosmetically, Very Good to Excellent Condition. They are complete and original. Digital pictures are available upon request.
1. Hallicrafters SX-100MKIA, $250;
2. Hammarlund HQ-145AC, Late one with Clock, Great on SSB. $325;
3. Hammarlund HQ-145A, No Clock, $295;
4. Hammarlund HQ-140X, Very Nice, Original Manual Included, $275;
5. Original Speaker for Above HQ-140X, $45 with receiver only;
6. Hammarlund HQ-150X, Also Very Nice, Original Manual Included, $275;
7 Original Speaker for the Above HQ-150X, $45 with receiver only.
All Prices Do Not Include Shipping Costs. I will Double Box and Pack them so that they will not be damaged. No Charge for Packing. Buyer pays actual shipping charges.
If you are looking for one or more of the above listed receivers, you would be hard put to find nicer ones.

Thanks, Charlie Hugg, K5MBX

2437. FS Old RCA Tube Manuals

FT: Computer gear for HF Rig / equipment 1

I have the following computer gear available for trade or sale on a "newer" HF rig and equipment. Specifically interested in the below units but open for other suggestions. I am workable, will put money into it if your gear is worth more.

* Kenwood TS-50, TS-840, TS-847, TS-900
* Yaesu FT-100, FT-840, FT-900, FT-847
* Icom IC-706 / 706 MKII / 706 MKII-G
* Alinco DX-70 / DX-77
* or ??

What I've got.

// Compaq Deskpro Server
400 MHZ, 128 MB Ram, CD-ROM, 8GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. Tower case.More ram is available.

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 5 GB SCSI-2 HD, 10/100 NIC, Adaptec Ultra Wide SCSI Card, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Desktop case

// Compaq Deskpro Desktop
350MHZ, 128 MB Ram, CD-ROM, 6 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. More ram is available. Desktop case.

// Compaq Deskpro Desktop - Small Form Factor
466MHZ, 128 MB Ram, 8 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Small form factor case, very small footprint.

// Sun SparcSERVER 10 - Unix
50-MHZ RISC processor, 96 MB Ram, 4 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Sun SparcSTATION 5 - Unix
70-MHZ RISC processor, 64 MB Ram, 2 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T

Ethernet, On-board Sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Hewlett Packard Rack Mount Network Hubs
4 available, 2 14 port and 2 15 port hubs. All are in excellent condition and recently removed from service. These are rack mount servers.

// Proxima LightBook LB20 DeskTop Projector
SVGA and RCA inputs, 200 ANSI lumens, Serial jack, Computer in jack, Monitor out jack, Video in jack, Audio in & out, TV output, Twin Lamp, True SVGA compatibility (800 x 600), International power supply, LightBoard drawing tool, Remote control, Lightweight (11 pounds - 13.5 x 9.25 x 5 inches), Custom padded case. This unit is in excellent condition and includes all the original equipment (cables + books).

If you see something you like, please let me know. I am open to trades or sales on any of the machines. Willing to trade multiple machines for the right gear. Response via Email is preferred.

Sales always welcome ...

Thank you!

I am sure you guys will use them with proper licensing. By the way,
did you see where Riley popped a couple of non-ham unlicensed
bootleggers on 20 meters? Yeah, they were transmitting on 14.310 (like
Tim Nebout [www.kp82.com] bragged that he used to do, or still does
for all I know). Not too smart I'd say.

Message-ID: <to3br8dppkjq11@corp.supernews.com>
Source record: 55451

Thank you all, for the good info.

The fan is pretty quiet, I thought at first that it never ran. I did have to look closely to see it running.

I will however troubleshoot it. The service manual shows a thermistor circuit. If the fan is ok, maybe I will install an external switch in parallel with the normal circuitry.

thanks again, KC2GDS

Yeasu Dual slot rapid charger NC-50 with adapter cups for the FT-50. $45
Thanks, Bob

2450. FS:ICOM-751a

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-21 01:01:27 UTC
From: rhermanNOSPAM@gsinet.net
Message-ID: <7rig7.876$c54.32013@eagle.america.net>
Source record: 55454

ICOM-751a with internal power supply, UX-14 CI-V serial computer interface and 250HZ CW filter. Only modification is that the memory/battery board has been replaced by a unit from Willco Electronics that places all critical radio parameters in permanent ROM memory and the user programmable stuff in battery backed RAM. Also increases memories from 32 to 32 banks of 32 (i.e. 1024) but requires wiring modification to access the additional memories. This wiring modification has not been done. This replacement board overcomes the dreaded DEAD RADIO problem when the battery runs out which requires factory reprogramming.

The radio comes with original Mic (never used) and most of the nuts and bolts that were never used.

Problem: VCO3 which affects 15 and 17 meters tends to get out of adjustment resulting in raspy audio both on transmit and receive. It's an easy adjustment to make requiring only a voltmeter, but apparently doesn't hold for long. The factory recommendation is to replace the original plastic trimmer caps with new and better units. There are four VCOs and four trimmers. The circuit is surrounded by a shield soldered to the board. I have the parts but not the will or time to attempt the repair. ICOM's charge for the repair is estimated to be about $200.

If I have to get the repairs made, I will be looking for $700. If you want to try it, I'll let the 751a go for $500 with the replacement parts and service manual.

I'm the original owner of this radio and am not aware of any other problems.

I would prefer a sale in the New England area as I don't want to deal with shipping this unit.. It is rather heavy with the internal power supply and I'd like to make sure it arrives safely.

You might find one that sets itself via WWVB (60kHz signal). If you go to www.nist.gov then make your way to the WWVB page, they have a listing of receiver manufacturers. Check some of their web sites and you may find something suitable. Also, I just went to www.atomictime.com and then to www.radiocontrolledclock.com/rcweatcloc.html. This might have _JUST_ what you're looking for ! ! !

Source record: 55475

I checked radioshack.com and they sell a SAME weatheradio "with atomic clock" -- cat. no. 12-253 -- for $79.99. Interestingly, however, the product description talks all about the weatheradio features but doesn't even mention what is meant by "atomic clock." It looks like a clock radio, so I am ASSUMING that it's one of those clocks with a WWVB receiver in it. You may want to call Radio Shack and ask.

73,

Meade KA4RQB

I found a S85 in a basement and was looking to see what it would take to bring it back to life. The owner said it smoked about 10 years ago and hasn't worked since. I've ordered a reprint of the manual and the schematics but the owner thought the tubes were likely the suspect.

How can i test the tubes out? Its not like i can walk into walgreens and get the tubes checked like in the old days!

Thanks -- Steve, N9OH

: >
: This whole subject is bogus. This posting has been made before,
and
: refuted before. MRT did no such thing. Any perceived "insult" to
ham radio
: is taken totally out of context. If you want the truth, dig up a
copy of
: May 2001 MRT from a local radio shop, or wherever. They did not
portray any
: negative picture of ham radio in that article.
:
: Ed WB6SAT I read the article in May.
:
I read the May article too, and I wasn't parnoid either. I thought
the
whole posting was a publicity stunt or a troll. I didn't think
anyone
paid any attention to those editorials anyway. He seems to get his
ideas either from dog and pony walk throughs or disgruntled ex
employees trying to figure out what went wrong. I could write lots
too, but I would be preaching to the choir and no one else could
make sense of it.

In any case, the existance of Amateur Radio should never be raised
in the context of PLMR (and vsv) or the nation might suffer. As it
is, I have to flush my memory card and firmware every time I come
home from work.

LOL..... and WHO would you ask? In over 30 years of dealing with Radio Shack, I have seen MAYBE two employees that could do any more than recite from the catalog or find what you are looking for IF you give them a catalog number (assuming it's on the proper peg on the wall). Just a month ago, I sent my sister to Radio Shack to purchase a cable to go from her portable CD player to her home stereo, with the description "3.5 mm stereo plug to two RCA plugs"... they told her they had never heard of such a cable.... :(I then sent her back with their catalog number for the cable....

I just got a used antenna, which when matched to the ads, looks like the
Diamond SG7900.....
Trouble is, the current specs say the antenna is 62.2" long.
My antenna is only 58.5"

Any ideas on why the difference???

If you have this antenna, or it's manual or illustrations, which show
the lengths of the various sections, or distances from the base, I'd
sure like to see if mine has been altered or what.....

Thanks in advance 73.......n3tdr

Source record: 55401

I'd guess that this is a 6v OCTAL tube with a 75 second delay before closing. Lots of luck.

I realize that the original part would be good for resale value, but if you just want to get the thing working, there are probably solid-state replacements, some with octal plugs, others with 11-pin plugs, that will perform the same function, given a slight bit of rewiring. I'd bet that all this does is delay the application of HV until the filaments have warmed up sufficiently. The solid state timers might cost up to $40, but they're readily available through industrial supply catalogs (Grainger and Newark would be the places I'd look).

If you're good with electronics, you could "roll your own". We aren't talking rocket science here. A simple LM555 timer could run off the 6V input, with possibly a rectifier and filter used to provide DC to the timer. Set up as a one-shot, when it triggers 75 seconds later, it can activate a small relay, which in turn could activate a larger one if needed (depends on the load the 6no75 was driving). You could shove all this inside a plastic pill bottle and glue an old tube plug to it. Not pretty but now it's serviceable and will do the same job, perhaps even better.

Hope this helps.

Bob M. WA1MIK

2498. FS: SMA-TO-BNC CUSTOM FIT ADAPTERS

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-22 01:37:32 UTC
From: gulyas@netzero.net
Message-ID: <f002a6a1.0108211737.1c1a26db@posting.google.com>
Source record: 55402
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner

If you have a need for an SMA-TO-BNC antenna adapter that is custom made to fit and protect your H.T. or scanner radio, I have the solution.

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed for moisture and dirt protection.
The base also provides an excellent support for any length of antenna or application.
No need to remove adapter once installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71
Alinco: DJ-V5
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000 Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify radio model when ordering)

The 777+ is good but not great.

Stuff I like:
- Measures battery capacity.
- Displays how much juice went into battery.
- Charges lithium, nicad and nimh.
- Covers a decent range of voltages.

Misses:
- Fixed 800 ma charge rate. A bit high for smaller packs. The really nice chargers let you pick the charge current.
- You have to read discharge capacity as soon as it beeps. Once charging starts the discharge capacity is lost. This is contrary to what the manual says.
- Peak detection isn't what it should be. It always charges nicad/nimh packs until they are hot.

For me the main value is the LCD display. You get a good idea of what shape the pack is really in.

73,
Jim N2VNO

Steve, I will be glad to check those tubes...just send return postage. However, I do think you are opening a can of worms. First, even though a tube checks OK on a known good tester doesn't mean the tube is good. Second, most old boat anchors that have sat around a basement, garage or even in a home will need much more than tubes. Usually (I did say usually my dear flamers) you will need to replace some capacitors and clean the mechanical connections (band switch, mode switch and gain controls). You mentioned that "it smoked". You may be looking at a bad power transformer. After you get it where it will play, an alignment is usually necessary. Unless you are set up for this, I think you will have much more in it than what it will be worth. My recommendation is to dump it on eBay describing it as "smoked, not working and as is" or if it is a pristine unit (which I doubt) that you would like to keep, send it off to someone who is set up for this kind of repair. I can't ever remember obtaining a non working communications receiver and repairing it with a tube or tubes. A real nice working S-85 isn't worth a whole lot. Just my opinion. Good luck, JP

Source record: 55411

I'm selling my Kenwood TS-50 with matching AT-50 antenna tuner. Both units are in excellent
condition. Only very minor surface marks. Never mobile.

This is an easy to use and very compact little rig and the tuner works like a charm - I've used
it with dipole, G5RV, and delta loop and it works great. I've been using it as a base rig, but it would make a great mobile or field day/DXpedition rig as well.

Set includes manual (with plastic covered manual), mic, DC cable, AT-50 connector cable and mobile mount. Original boxes and packing included.

$725 for both.

Pics available on request.

I'll pay shipping anywhere in CONUS. Will consider trade for newer full-size, HF or multiband HF rig.

I'm interested in working HF and would like some advice on which HF rig to get. While the rig would be used primarily at home, I'd like to use it for Field Day and would like it to take up only a small amount of space. So I'm considering a mobile rig but I'd still consider a base station.

Would someone give some advice on which rigs to consider - there are a lot of them out there (Icom, Yaesu, Kenwood, Alinco).

I have a like new Kenwood TM741a TriBand Mobile. When you buy this radio new for over $600, it only comes with two modules installed. It came with the 2m, 440 modules, and I installed the 220 one, along with the encode/decode add on module. I have all the manuals and the complete seperation kit to remote the head. I think the cables are about 15 feet long. I also have a triband antenna that goes with it along with the triplexer.

If you take a look at AES, the unit alone is $640 with only two modules installed, and each additional module is between $200 and $300. The tone unit is $60. So for less than the price of the unit with only two modules, you can get one with three and all the other add ons.

Price: $625 obo shipped in the US and Canada only. Payment is Prepay or COD with Postal Money Order or Cashiers Check only. I don't do PayPal anymore because of the HIGH percentage they take out. No personal checks either.

Friday it goes to all the Amateur radio auctions that I know of if no one picks it up. As much as I hate them, I might even try Ebay.

That depends on a lot of things, including your personal preferences. How much money are you willing to spend? What features would you like? How much power to you want to run? Is your primary interest in CW, SSB, or Digital? Do you want to use it mobile? Do you want to use it portable? Are you into contesting?

Basically, all of the major mfgs (Icom, Kenwood, Yaesu, and Ten Tec) make rigs which are reasonably compariable for a similar amount of money (i.e. comparing apples to apples).

If you are interested in a quality HF rig kit, take a look at the Elecraft Web page (http://www.elecraft.com).

I went through this a couple of years ago and bought a Kenwood TS-870. I have not regretted it. Well- maybe a little- I thought about an FT-1000 too.

For its capabilities is is reasonably compact; big enough to have real knobs, but not huge. It has effective i-f DSP, albiet with some i-f blowthrough with huge adjacent signals. Hetrodyne reduction is fantistic. The noise blanker is just so-so, however the DSP noise reduction is pretty good.

The transmit audio is great and capabile of considerable tailoring. The speech processor is of the split-band type a works _very_ well.

While I'm not a big CW man, the rig has a built-in keyer with four message memories and all of the adjustments you could ask for.

Plus there are all of the other features expected in a contemporary rig: built in antenna tuner, fully computer controllable, lots of memories, scanning capability, AM, FM, CW, SSB, PSK, DC to daylight receive capability....

While I have not taken this mobile (I think its slightly too large for my Camaro SS <g>, I did take it traveling in my travel trailer and operated portable for three months and it worked dandy. While on last year's trip I worked FD in 5W-battery powered class just by turning down the power control.

This is like asking someone which car is right for you. I'm not trying to be mean-sounding, but an expenditure of a thousand dollars or more really shouldn't be left up to others' recommendations. Decide on your price range and then visit a dealer who will let you test drive the radios in that price range. Ask their opinions -- they'll be able to demonstrate them to you right there. I did that when I was in the market for a rig to replace my Kenwood TS-570D after a lightning strike in June. I drove the 100 miles to my nearest dealer, which happened to be Ham Radio Outlet in Woodbridge, Virginia. They let me sit down and play with a TS-570SG, IC-746 and FT-920 for two hours, answering my questions as I came up with them. (I took home the IC-746.)

Really -- the only answers you're going to get here will be biased toward whichever rig the respondent happens to own. Start with a clean slate and make your own opinions. If you'd still like to read people's opinions without starting the war that sometimes starts in these newsgroups, go to eham.net and check out the extensive owner reviews of many, many HF rigs ... past and present.

You don't mention a price range, but I'd go with the Icom Pro. Once you use the built in filtering capability and use the spectrum scope to find signals (or open band areas) you won't want to give it up.

As far as comparisons, I've had almost all of the top of the line rigs - 850, 870, 950, 1000D, 1000MP, Pegasus, plus many more, and consider the Pro to be the best of the bunch. I trade gear quite a bit (I like trying new equipment) but the Pro has a permanent place in my shack.

It's a great radio, and they're down to about $2400 now if you can catch one still on sale.

Well, most rigs nowadays are either small or tiny, unless you're looking at the most expensive, full-featured rigs.

One problem with the tiniest rigs -- they hide an awful lot of functions in software menus, rather than putting extra knobs on the face of the radio. Something to consider, if you're using the rig mainly at home and would rather twist knobs.

> So I'm considering a mobile rig but I'd still consider a base
>station.
>
>Would someone give some advice on which rigs to consider - there are a

You might ask,"Which is the best car?" There is no answer -- depends on your needs, and how much money you have.

I'd look at the transceiver product reviews at http://www.eham.net/ These are user reviews, written by hams and can be accessed for free.

I'd also join ARRL at http://www.arrl.org and look at their laboratory product reviews in the Members Only area. They cover virtually transceiver manufactured in the last 20 years.

A few rigs to consider in the lower price ranges: Icom 706 Mk IIg, Yaesu FT100D, Kenwood TS-50S, Alinco DX-70, Icom 746, Ten Tec Jupiter, Ten Tec Scout, or the Elecraft rigs (if you don't mind building a kit, and can get by on 5 or 10 watts).

Good luck,

Bob

|really shouldn't be left up to others' recommendations. Decide on your
|price range and then visit a dealer who will let you test drive the
|radios in that price range. Ask their opinions -- they'll be able to
|demonstrate them to you right there. I did that when I was in the
|market for a rig to replace my Kenwood TS-570D after a lightning
|strike in June. I drove the 100 miles to my nearest dealer, which
|happened to be Ham Radio Outlet in Woodbridge, Virginia. They let me
|sit down and play with a TS-570SG, IC-746 and FT-920 for two hours,
|answering my questions as I came up with them. (I took home the
|IC-746.)

Hmmm. As someone who just offered an opinion, I must respond to the obvious contradiction in your post.

You say in one breath, "an expenditure of a thousand dollars or more really shouldn't be left up to others' recommendations" and in the next, "visit a dealer who will let you test drive the radios in that price range. _Ask their opinions_."

So a dealer that probably has a "preferred" radio that has a bigger markup or a special incentive is more "objective" than a guy that went through a significant evaluation process before making a similar choice and proffers same?

|
|Really -- the only answers you're going to get here will be biased
|toward whichever rig the respondent happens to own. Start with a clean
|slate and make your own opinions. If you'd still like to read people's
|opinions without starting the war that sometimes starts in these
|newsgroups, go to eham.net and check out the extensive owner reviews
|of many, many HF rigs ... past and present.

Aha, "owner reviews" on eham are less biased than "answers from people that own a particular rig" are in this newsgroup.

Well, I went to Radio Shack awhile back, looking for bnc-to-coax adaptors, and two guys spent five minutes in vain, trying to find what I was looking for -- I finally asked them to stand aside, and plucked the adaptors off the pegs in about five seconds.

There have been many useful rigs made since the 80's
that will fill the bill for your base/mobile/portable ops.
Later when you're rich you can buy one of the new wet
dream radios. Icom/Yaesu/Kenwood all make very
nice high end radios, but short of that there are several
models from various manufacturers in the mid price range
that have their own following. One thing that bothers
me about a great many of the new mobile rigs, is the
tuning rate that seems to be either too fast or too slow
for my taste, even with all the busy selections to be made.

You would be well off to visit hams in your area to get
some hands-on. There are no perfect radios and a few to
avoid, but mostly all can be pressed into service. All seem
to need some ingenuity on your part to get the most of.

This is an exciting aspect of building your own personal
station!

There is half a zillion that would do the job. I guess it boils down
to how much money you want to spend. If you stick HF only, you can get
by pretty cheap.
If you add VHF/UHF a bit more. All the above that you mention make
suitable rigs for your purpose. I bought a IC-706mk2G a few months ago
for 900$ new. It's HF, VHF, UHF, in one very small box. For the price,
it's hard to beat for what all it will do. But you might not want to
spend that much. If all you want is HF, you can spend about half that,
or maybe a little more , and get a decent rig. Also many good used
rigs that would do the job for a lower price. I'd decide how much you
want to cough up and go from there. MK

Take a look at the Alinco DX-70:

http://www.alinco.com/usa.html

It's a 160M thru 6M mobile/base rig, with SSB/CW/FM/AM capabilities. It's a simple rig, but still includes everything you really need. The DX-70 is the base model (100W HF, 10W 6M), without the tone encoder. The DX-70T is the base model with the tone encoder, and the DX-70TH is the high power model, with 100W on 6M.

I just purchased a used DX-70T $400 and am quite happy with it.

The "Yo-Yo-Tenna Deluxe" is going to be featured in the Nov. and Dec.
issues of CQ magazine. So you may want to get yours now...just in case
we get back-logged. Plenty in stock. They work 40 through 2 meters.
Operation on 75/80 and 160 can be accomplished by adding single reels.
A lot of fun! Many say it reminds them of the old "Hy-Gain tape
measure" antennas of the '50's. ONLY $29.95 plus s&h.

For a photo and more details, please visit:

_____

Meade is exactly right on.

If you really have difficulty making up your mind, here's a suggestion:
Make the best choice you can based on what you know and buy a USED one.
If it turns out you really don't like it, you should be able to sell it
for little or no loss. Maybe even a gain. :-)

Then if you decide you really, really like it and want a brand new one,
you can get it without taking the potential loss if you didn't like it.

Having said that, my recommendation (what I have, of course) is a TS870S
for home use, an FT-100D for HF mobile and an FT-2600 for 2m mobile.
All great rigs.

Have fun!

Well, Angelo, if you ask 5 hams for an opinion on a subject like that, you are sure to get at least 6 different answers.

For me, after seeing the problems I might have before, during, and after a hurricane, the decision was easy: EVERY rig I have operates on battery power. No matter that I might use an external power supply in the good times, when things go all to hell, I can hook up to any available battery and keep on trucking.

I can't compare different rigs very well since I have never had other than Ten-Tec. Starting with the Century and up to the Corsair II and finally the Omni VI+, all have worked well and trouble free. Sure, they are bulky compared to the Icom, Kenwood, and Yaesu, for instance, but I'm willing to pay that price, even in a motorhome.

_____

I meant to add that one very important consideration for an HF mobile
rig IMO, is a detachable faceplate such as the FT-100D has. Icom also
makes one. I've had lots of HF mobiles over the years, and the
detachable faceplate is an absolute blessing.

Out of curiosity, why the separate 2m rig? Personal preference, or is
there something the 100D lacks for VHF?

2556. Ameco PT-3 insertion

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-22 22:34:56 UTC
From: Les <lesmoore@mindspring.com>
Message-ID: <6mc8otg45p5lapu47tf90pltgfmcdak5r0@4ax.com>
Source record: 55358
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

Just got my new PT-3 from Ameco. The instructions say to put it
between the xcvr and the antenna or the xcvr and the linear.

My question is how about a tuner.

I have a TS-440 with the MFJ tuner, no amp.
Should I put it between the radio and tuner or tuner and antenna ?

Thanks,
Les

2557. IC 24 problems

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-22 22:39:42 UTC
From: Brenda Ann <brandad@kornet.net>
Message-ID: <9m1cbaiol1@hiline.shinbiro.com>
Source record: 55367

Time to try this again. :)

I have an Icom IC 24AT with an audio problem. A little history may be in order first. When I got the radio, it had receive audio, but no display, no controls, other than squelch and volume. I opened the unit up, found some broken solder connections to the control panel, reset the CPU, and the display and controls came up, but my receive audio was gone. I have tried the obvious tricks of plugging in an earphone to see if there is any output from the EP jack, to no avail. The radio does have TX audio. I have looked carefully at the area where I reconnected the broken solder connections, and there are no bridges or other anomalies that I can see. If anyone has any idea where I can look to fix this problem, or has a schematic for an IC-24AT that they can e-mail me, I would greatly appreciate it.

I have two separate installations. No, the 100D is not lacking at all for VHF. A fine VHF rig.

Ok, maybe one teensy gripe about the 100D. The memory scan rate is a bit slow compared to the 2600. It scans about 5 channels/second where the 2600 is so fast it's almost a blur. I've been all through the manual looking for a speedup, but no luck. If anyone knows of one, I'd appreciate the info.

Seems clear enough to me - tuner, amp, what's the difference. The preamp
wants to be connected to the transmitter.

Here's something that every ham radio operator, test equipment junkie, and electronics specialist needs to have - I have several CD-ROMs, packed full with 46 in depth manuals covering dozens of Tektronix test equipment pieces in Adobe Acrobat .pdf format. These include a .pdf viewer on the disk to view the files. Included on this CD-ROM are over 80MB of data, including calibration procedures for 20 different units (calibration adapter TU-7, o-scope 545A, o-scope RM45A, preamplifier plug-in K and 53/54K, plug-in L and 53/54L, current probe amplifier 131-1 thru 131-4, probe P6016, o-scope 541A, wideband plug-in B and B mod 601, wideband plug-in 53/54B and 53/54B mod 601, dual trace amplifer 3A1 and 3A6, time base plug-in PL-1311U and 2B67, o-scope 317 and RM17, automatic video corrector 1440, probe 010-0277-0, digital multimeter DM501 and DM501A, spectrum analyzer 7L5 w/plug-ins L1 and L3, constant amplitude signal generator 191, distortion analyzer TS-4084/G, o-scope 321 and 321A, digitizing o-scope TDS540B), operators manual for the dual time base 7B92A, maintenance manuals for 14 units (function generator FG501A, logic analyzer 318 and 338, graphical display system 561 series, time base plug-in 3B4, spectrum analyzer 491, spectrum analyzer 7L5, differential amplifier 7A22, dual time base 7B92A, vertical amplifier 7S11,pulse generator PG508, test set 1502-1, power supply 1106, power module TM503, universal counter DC503A), and maintenance repair parts and special tools lists for 22 units (power mainframe TM506, o-scope 475 w/option 04, o-scope 475 w/options 04 and 07, har copy unit 4632, logic analyzer 318S1, prescalar DP501, oscillator SG505 opt. 1, electrical plug-in 067-0938-00, electronic plug-in S52, sampling time base 7T11, sampling head S4, sampling plug-in 7S11, time base plug-in 7B53A, vertical amplifier 7A26, o-scope 7613, load pulsar calibration fixture 067-0521-01, function generator FG502, sweep generator SG503, dual trace o-scope SC504, digital multimeter DM501A, digital counter DC508 opt. 1, tmders mainframe TM515). These are military manuals that are more easy to understand than the Tek commercial manuals, and a great bargain! Tektronix would charge you well over $1,200 for a set of manuals to cover these units, I can sell the CD-ROM for $19.95 plus $2.50 shipping (USA). Can accept PayPal. Email mdavids@erols.com if interested. Thanks!

I've got a Motorola R2001B service monitor with a power supply problem.

I could sure use a service manual for it, or at least some help from someone
who's experienced with this unit.

The entire RF and controller sections are working as far as I can tell.
The problem is that I've got nothing on the CRT, no raster, no high
voltage, nothing.

I THINK it's in the HV circuit, but I don't even know the input voltages

to it yet.

Any help (or the manual) would be greatly appreciated.

Please email me directly because I don't get around to this group on
a regular basis.

Thanks.

Bob... tried a few sources, but couldn't find any reference to the FNB-42, so i'm not sure what voltage it is supposed to be...

if it remains seriously under spec voltage after 3-4 deep discharge, full charge (14 hours at 1/10 of capacity in mah) cylcles, then you have one or more dead cells in the pack... if you're handy, you can open the pack, check the cells, and replace the bad ones..

best idea is to buy or make a full replacement insert of cells, and put that into your battery case.

Jim, very good Pro/con... I'd just like to add.. I think it's an OK
NICAD charger.. It brought my Kw. KPB-9A back to life, but I don't
think it handles NiMH well.. I saw a report about over charging a NiMH
pack and I saw the same thing with my Icom BP-85NiMh back... However,
I was able to see how much power (in mha) was being appiled to the back
and was able to stop the rapid charging, but was not able to place the unit
into the triricle charge state that happens once the Charger hits final
charge
in rapid state charge.. Would be a nice feature to Kill rapid charge and go

into tricle charge, but would require another button/input into the micro-
P..?
MaHa are you listening? There is also no way to select NICaD vs NiMH..
Maybe that's the problem?

Overall, I say its Good... (7.5 of of 10)..

Hi Folks, almost embarassed to post this..

Proud owner of a "cast off" Yaesu FT-2600. Like the radio so far, but did not recieve a manual. Having trouble with some of the more basic commands for this radio. It's definatly not a FT-2500 in terms of ease of use!..

I ordered a manual from Yaesu, but it won't be here till next week and I'm using the radio now.

Anyone feel like typing, FAXING, or scanning some of the manual for Mr. Clueless here?

Like how to save a freq to memory, and toggle freq, channel or alpha tag display when scanning?

How to save a freq with an odd TX split?

Any other words of wisdom?

Thanks folks, I appreciate it.

Brian

2574. Info on Cushcraft MA5V Vertical Ant.?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-23 06:15:02 UTC
From: Richard Friedman <rchrd@rchrd.com>
Message-ID: <3B849F66.57104B19@rchrd.com>
Source record: 55377

Anyone have anything to say about the new (?) MA5V multiband
antenna from Cushcraft (see add in Sept QST, p125).

This would fit into my physical space really well, but I
haven't any real info to go on. The thing doesn't appear
on their website (the cushcraft.com website is a disaster -
email bounces, and any attempt to request a catalog gets
a scripting error!).

The MA5B beam looks even better, but I'm not sure I have
room for it. So I'm eyeing the vertical.

Anyone have any input to share before I get impulsive?

Sounds like it's got one or more bad cells. Non use will kill those
batteries if they go dead and sit for any amount of time. I always try
to keep a charge on them at all times even if not using much. I'm
using mainly nickel hydryde batteries now, as you can top off the
charge at any time without worrying about "memory" problems etc. MK

Bob,

Sometimes NiCads, if left discharged for a while, will grow hairs inside
which short the cell. You might try to use a 30V power supply to zap the
battery pack. Or charge a large capacitor to 30+V and use that to zap the
pack. A lot of times, it is enough to burn the hairs and unshort the
battery, where a normal charging current will not be enough to burn them.

If that doesn't work, tear it apart and see if you can replace the batts
with NiMH instead. You won't be sorry!

>for -- I finally asked them to stand aside, and plucked the adaptors off the pegs
>in about five seconds.

In the Old Days, the typical Radio Shack store was staffed by people
with - guess what? - radio knowledge. This is not the Old Days. This
is the era of Mass Merchandising, where the clerk's training is pretty
much limited to remembering to demand your name & zip code when you
buy something.

I'm sure there must be, somewhere, a Radio Shack store with an
employee who knows a capacitor from an antenna - but I have kinda
given up expecting to ever find it!

Kenwood TS-140S with original hand mic and power cord. Owner manual included, but is photocopied.

The rig is in perfect operating condition. I have used it daily for about 2 years. It has a few scratches on the case. No dents, gouges, or broken parts.

Features include: 160-10 coverage including all WARC bands; Transmit power: 100 watt output; General coverage receive (00.0050.00 - 35.000.00 MHz) ; USB, LSB, CW, AM, FM; Dual VFO's; 30 memory channels; Full Break-in CW (QSK); VOX; RIT; IF Shift; Speech processor; Dual noise blankers; receive attenuator, etc.

Click below to view full specifications:
http://www.qsl.net/sm7vhs/radio/kenwood/ts140/specs.htm

Click below to view a picture of a TS-140S:
http://www.rigpix.com/kenwood/ts140s.htm

Asking $375, buyer to pay shipping from 65781.

Why don't you simply stick to the technical facts and ignore the techno babble and user heresy.

For a start I would focus on the receiver performance. The 3rd order imd dynamic range, blocking dynamic range, transmitter phase noise, 3rd order and second order intercept points would be a good start. The transmitter 3rd order IMD should also be a focus of attention. All these subjects are covered well in the ARRL Handbooks. These very important figures seemed to be typically totally ignored by most reviewers. If you look at typical rig like the Icom 756 PRO if you understood what these measurements meant you would not buy this radio, but many seem to think its the greatest thing and best performing radio ever. I have read reviews on EHAM where one user commented that he had every top line radio and that the receiver was the best he had ever had. Yet clearly this was not true according the measured data. I you not sure what all these term mean you can get a summary on www.elecraft.com

Cheers
Willy

RS is not the monopoly on poor help.

Just go to any store and you will find same situation.
Sometimes you will find the exception to the rule, a sharp
guy or gal who knows what they are doing and most important
WILL LISTEN TO YOU before answering !

Too bad Home Depot is not into ham radio gear !

Just like on that jay leno show where he asks young people
basic questions on college campus or the street, you gotta wonder
where these kids got their education from. Some never should
be in college, but the are and end up as your boss !

After hearing all the discussion and owning a Yeasu FT-100D and a Yeasu FT-757, I have to say I would like to buy another Drake TR-4. I sold mine and now miss the quietness of the recieve background hiss. Order of magnitude less hiss than modern rigs. You can really pull in the weak signal when you are not fighting with the digital vfo noise floor.

I have found only 3 types of shops which are man'd by experts,

Ham Radio Stores
Jewelry Stores
Camera Stores

Outside of those three, no shops I know have experts anymore. We used to
have a hardware store, TruValue who had retired electricians, plumbers, etc
who worked there. But the largers stores effectives ran them all out of
business.

Pity!

Later.....

Yep phase noise is a problem. The new Yaesu MK5 is a good example of a radio with high phase noise. What a pity, it seems ham manufacturers seem to forget how much listening hams do, its just a shame having to listen to noise.

I have on occasion come across Radio Shack stores that employ knowledgable individuals.
Most of them have been HAMS! In leaner times, I have worked at Radio Shack. I found
that knowledge was not an essential ingredient for success. They are looking for sales
ability. Push the RS credit card and warranties! Sell em' something they don't want or need, etc.

Being retired now, I would probably enjoy working in a Radio Shack store, but, their
sales policies and low commissions keep me from even considering such.

2598. Re: Yaesu HT battery problem

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-23 17:58:09 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <9m3gco$310$2@madmax.keyway.net>
Source record: 55302

I agree. Sometimes you can zap them, but if you aren't
cycling the battery often enough in regular usage, it
won't last long even if you do get lucky.

NiMH don't get a memory, and don't self-discharge near
as bad as NiCads. It's nice to be able to pick up a radio
from the drawer after a month and it works. That means
you don't have to leave it in the charger all the time either.

I have new 1100 Mah AA tabs for $2.50 ea if anyone
is interested.

"Billy" <billy@forgetit.org> wrote in message
news:3B84FD96.D3D4C8F3@forgetit.org...
: Bob,
:
: Sometimes NiCads, if left discharged for a while, will grow hairs
inside
: which short the cell. You might try to use a 30V power supply to
zap the
: battery pack. Or charge a large capacitor to 30+V and use that to
zap the
: pack. A lot of times, it is enough to burn the hairs and unshort
the
: battery, where a normal charging current will not be enough to burn
them.
:
: If that doesn't work, tear it apart and see if you can replace the
batts
: with NiMH instead. You won't be sorry!

The last time I was in Radio Shack, the guy told me that they were getting out of the radio business.
Phones, toys, computers, satellite tv. I guess they can change their name to Shack, or Electronics Boutique. Oops..sorry...already have one of those in the mall.

Jeff

Excellent condition with original box and manual and hand mic., if you have been thinking of getting a 756 or thinking of buying a newer rig with lots of bells and whistles, this is the one. Works perfectly and looks like new.

NO reserve and low entry bid. Upgrading to a new PRO so this one is excess to my needs. Thanks for looking!

I use an SGC230 with an inverted L. I had the first one for a number of years. I sold it and put up a loaded 75 meter dipole when my trees got taken down. Recently bought another SGC230 and a mast and put the inverted L back up. A great tuner and great service from SGC.

If you could read between the lines you would see as I said that things
are being worked out without anymore slamming on the newsgroup. It
sounds to me like you just like to hear more arguing. I think you sir
need to get some glasses to read between the lines a little better.
Damed if you do and damed if you don't. I would have been better off
not listing a follow-up because there are always people like you who
like to keep stirring the crap. I told Martyn I would do this and that
is what I am doing. If you call that sticking to a person...well I just
don't know what to say.

From: Ron <NoSpam@nospam.com>
Message-ID: <c4lh7.1459$kN3.11835@typhoon.sonic.net>
Source record: 55321

I have an SGC 237 that I bought a couple of months ago, and so far it has worked very well. Currently using it strapped to the trailer hitch of an SUV, and tuning a 102" whip 80-6 meters with no problem. I took it on vacation to Hawaii and fed a short, center-loaded ground-plane with a few short radials, and it tuned fine. Additionally, I have experimented with a 100' inverted V with the tuner up on a pole feeding the V at 20', and random length wires.

I'm feeding it with an Icom 706MKIIG and 100 watts. The weather-proofing is excellent, and the unit is solidly built. The 237 is virtually identical to the new 239, however there are more coils and capacitors in the 237, giving it a much greater tuning range, needing only a 23' radiator on 160 M, where the 239 needs over 100'. Also, the 239 does not have the weather-proof casing, and must be protected if used outdoors.

Like most SGC stuff, it's pricey, but worth the investment for commercial-grade equipment.

Message-ID: <tocnra13oll1b@corp.supernews.com>
Source record: 55325
Cross-posted to: rec.radio.amateur.equipment,alt.radio.amateur

I just passed my Technician exam, and I'm shopping for my first HT. I'm thinking the Icom IC-Q7A is pretty nifty. Very versatile, but am I screwing myself with the 300mW output? I very much like the fact that I can monitor the aircraft bands. Next choice up, I think, would be the IC-T81A quad-band, but for more than 2X the money!

Any and all guidance here would be appreciated

TIA,
John (no, I don't even know my call sign yet ;)

I've been to a couple that had one or two hams on staff, but they're
usually students at one of the local tech schools, so they tend to
disappear as soon as they graduate.

I've been known to quiz the stores before buying expensive stuff. I look up a few basic stats on the item I'm interested in, then ask the sales staff. "I don't know, but let me look that up," followed by an answer within 5 minutes is OK, no offer to look it up, or a BS answer loses them the sale.

John, get something (even used is fine) with more than 300mW. I tinker with a couple of milliwat rigs...fun toys, great at hamfests. Always the secondary or tertiary rig, tho. Look for a good mobile w/PL (Alinco/Kenwood/Icom/Yaesu all make good units, if you get a used one get it checked first) and then an HT for portable use. I have an old Yaesu FT470....love it. Dual bander which is milspec construction, simple operation, tons of accessories. On the mobile side, see if you can find one of the old HTX242 mobiles from RatShak for $70 or so....cheap, not too bad and 40 watts or so output. Programming is a bit of a pain, but I've seen worse. Prefer my Alinco DR570 dualband unit, older crossband repeat capable unit, but the HTX242 is fine for my company car.

Unless you live under the repeater (i.e., quite close), the milliwatt unit will not make it unless under extraordinary conditions (I've done over 90 mi. into a repeater with a 250 mW rig...but it helps to have the antenna up 3500 ft.).

Things to look for: Memories (alpha tags are nice!), PL tones (easily programmable is best...forget codes or switches), switchable hi/low power (when you're under the repeater <<g>>)....um...guys, toss in some other suggestions here!

Power, power, power. Those are the three most important things in an HT.
Not size, not features, not looks, just power, coupled with a good receiver
and decent audio. If I were you, I wouldn't even THINK about buying
a radio that doesn't put out a minimum of three watts. There are plenty
of times when six watts isn't enough. This is especially important if
you have any desire to talk to anybody on a simplex channel like 146.520.

But I admit, I have my own definite opinions. You might be happy with
a radio that I'd consider to be less than satisfactory. Try out a few
and see what rocks your world and what doesn't. For me, it's Motorola's
Astro Saber III portables, but they start at 3000 bucks each, new. (I own
three
of them, bought slightly used at good prices that would still make most
hams flinch twice.)

Good luck, and welcome to the nuttiest of all hobbies.

We now have the "Peanut Whistle Two" QRP CW transmitter with 7.040 MHz transmit crystals available. Many hams suggested that we carry the crystals for those of you who don't have any in your junk boxes. Just got another fresh shipmet in this morning. We are offering the xtals to you AT OUR COST with the purchase of our "Peanut Whistle Two" 40 meter QRP CW transmitters. These lil' units are a blast! ONLY $19.95 without crystal...ONLY $29.95 WITH crystal!! (Plus applicable shipping and handling...) BTW, if any of you are new to QRP, 7.040 MHz is the recognized international QRP calling frequency for 40 meters.

For a photo of the PEANUT WHISTLE TWO and further deatils, please visit:

I'm seriously considering one of those SGC auto-tuners to feed my
300 foot inverted-L, but, the the SGC tuners only search for a
<2:1 match. I'm concerned that my TS-850 might still be folding
back power with that SWR. Anyone out there have any experience with
these tuners and Kenwoods?

2634. Re: SGC tuners and Kenwoods

"the the SGC tuners only search for a
<2:1 match. "

Based upon experience with my SG-230 and an inverted L this is only partially true. I think it may accept a 2:1 match *if* it can't find a better one. My experience is that the SWR always ends up very close to 1:1. The SG-230 measures transmit frequency and retunes if the frequency has changed. It also monitors the SWR and a re-tune is initiated if it goes above 2:1 due to some change in the antenna. Re-tune will be initiated by a frequency change long before the frequency change causes SWR to go to 2:1. The bottom line is that I never see SWR anywhere near 2:1 - your TS-850 should love it.

Thanks to all those that answered and emailed me.

I was sure that that is where it should go, between the xcvr and
tuner, but I wanted to make sure for the best performance.

For those interested, I am quite pleased with the results with mine on
my TS-440.

The bulk of their sales occur during the Xmas season. I guess they figure
you can sell more to make up the difference. Too bad RS doesn't wise up and
hire qualified personnel and pay them a real wage. Their slogan,
"You've got questions, we have answers", might become a bit more reality.
But, they never promised the answers would be correct, did they??

Excellent choice. Life is too short for 300 milliwatts.

I have an Icom IC T2H; it's a good 6 watter. You should like your T7H.

>thanks for all the info everyone. I had a feeling the battery was
>toast...only used it about 10 times! what a waste of money....

I checked the specs on it: 9.6V, 1100 mAh

Any battery pack at 9.6V will give you the full 5W output power, the
6V ones limit you to something like 3.5W output instead.

There are some non-Yaesu suppliers who sell replacement battery packs,
some with better specs. Others will rebuild your packs with new cells.

Happy trails,

Greetings;
I was wondering if someone had pictures of where they mounted
a Icom 706 or simular type of rig in a Jeep Cherokee (not Grand Cherokee)
that they would like to share?

Cross-posted to:
rec.radio.swap,rec.ham-radio.swap,rec.radio.amateur.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

I have an Icom IC-2SAT ht for sale. The radio is in great shape and was part of another deal for several radios. I have too many 2m HTs so this one is for sale.

The IC-2SAT has an internal battery, 48 memories, 10 DTMF memories, CTCSS encode and decode (because this unit has the optional UT-50), and is in great condition.

The package includes: the IC-2SAT and antenna, a spare internal battery, the charger, a BP-83 battery pack, manual, a HM-46L hand mic that I picked up in another deal, and of course the UT-50.

I'd like $75 plus shipping.

Source record: 55248

I don't have pix, but it was easy.

Hang the RF deck on the back of the rear, fold-down seat. I put it on the driver's side of my '95, since the spare tire ate that space anyway.

I mounted the control head on a flex-gooseneck mount meant for cell-phones, and bent it to place the head just in front of the parking break. That allows me to tune while resting my arm on the center console. The power leads are fused at the battery, run thru shielding braid, and are bonded to the fender on the passenger side, engine block at the rear, and over to the driver's side, where I fished them thru the chassis rail to the back. There is a plastic plug thru the body at the rear, which I used to get the leads to the rig.On the antenna I took the easy way, and ran the coax out the back hatch. I use a hitch/receiver, and a commercial bar under the ball. Here I have a bugcatcher antenna.

My rig is a bit larger (FT-900). I use a radio shack amplified speaker to get adequate AF.

2650. Re: Recommend First HT?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-25 11:35:41 UTC
From: Patrick Mason <Jimmyk@mindspring.com>
Message-ID: <9m82brofg1@nntp9.atl.mindspring.net>
Source record: 55254
Cross-posted to: rec.radio.amateur.equipment,alt.radio.amateur

I am very partial to the older HT's for 2 meter. For my money, an HT should be able to be used as a mobile in a pinch..... therefore it should be able to put out 4+ watts. It should also have the capability of an external mic.

I own 2 Icom 02AT HT's and am working on buying a third one right now. I also have two HTX-202's which were built on similar design as the Icom 02AT. Both are 2 meter rigs, they are not small, but there are plenty to be bought used on the internet that are in great shape. Some put out as much as 8 watts and are great units.

If it is dual band you are looking for, you can pull 5 watts out of a Kenwood TH-G71 on 2 meter and 3.5 watts on 70 CM, great little rig. Serves me well for ARES use.

Just my opinion, great to have you in amateur radio.

2654. Re: TS-870S vs TS-2000?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-25 13:16:42 UTC
From: willy <willyacht@yahoo.com>
Message-ID: <bwNh7.2248$Nd2.49827@newsfeeds.bigpond.com>
Source record: 55257

The TS2000 in summary is a piece of crap in real terms. The first problem is that the transmitter has very poor IMD, it very close to class C. Its a total insult that Kenwood markets box with such a bad floor. The receiver is not that crash hot. The blocking dynamic range, third order intercept points are very poor. Likwise the IMD dynamic range.

The TS870S has a better receiver, is cleaner with very low phase noise and reasonable phase noise. Most of the receiver numbers are very close to the FT1000MP.You can find all this info in QST reviews. Unfortunately most people do not understand what the figures mean.

Of coarse we will have Johnies who have had every radio under the sun tell you that its the best thing since sliced bread. If it was money i would buy the TS870s. At least you wont have a lemon.
The DSP alogarithms are all the same and are marginal in most cases, if you live in a noisy location you wont have much joy from any current DSP radio.

Cheers

Willy

Another shack cleaning special!

I have way too many 2M radios and so the Yeasu FT-270RH must go! The radio is about an 8.5 cosmetically. Otherwise the radio has given flawless service. The LCD is clear. It has the DTMF mic and does tones. It also has the mobile mount with quick release.

I would like $100 plus shipping for the radio. If you need a picture, I can take one and upload it to my webspace for your viewing.

I am looking for Cat 5e or preferably Cat 6 plenum
cable, all I need is 250 ft max. We can trade radio equipment, or
computer hardware, or cash. Here is the radio equipment I have to sell,
or trade.

Several data radios (handhelds) with chargers and cases.
Icom 02AT handheld, is working, but would be a great parts radio, plus
extra battery packs and quick charger.
Motorola data radio, radio only, I believe it is a maxtrac, was part of
remote alarm/telemitry unit.

I have lots of older ISA boards, plus multi rs232/parrallel boards. I
also have older in good
condition ide hard drives 250M or less .

Lets make a deal!

I have a TS-430S for sale. The radio is clean, in good condition, and
has the YK-88S filter.

Pictures:
http://www.eskimo.com/~ghopper/ts430f.jpg
http://www.eskimo.com/~ghopper/ts-430b.jpg

I'd like to get $350 plus shipping.

I don't have the handmic that came with the radio (actually, I didn't
get it when I bought the radio used). I have the MC-60a and will sell
that with the radio for an additional $100 including shipping.

Email with questions: ghopper@eskimo.com

I agree with the others, Price is an issue with most people. But you get what you pay for these days. I have a few handhelds around the shack and prefer to use my old trusty Alinco Dj-582t dual band for most portable comm's.. I also use an older RatShack HTX202 2 mtr ht for packett. I just bought an Icom IC-t81a quad band and then there is the little Alinco Dj-C1 which Im still trying to make a contact with (credit card sized 300mw). For just someone starting out I'd recomend a dual band 2 mtr / 440 ht because once you start making contacts your going to want to try more frequencies and a dualbander is the reasonable choice. You might want to try E-bay and see what people are paying for used and you might be able to get one at a good price. ..

I hope my little sermon didn't put anyone to sleep ..

For Sale Hallicrafters HT-40
Works 45 watts out on CW. AM sounds good. Front panel has wear around function switch and RF-Grid current switch. Lettering looks good just gray background worn. Cabinet has been repainted looks like crap. Good news is lacquer thinner takes off new paint and old paint polishes up good on the area where I tried it. Inside top and bottom of chassis very clean. All knobs are correct. Copy of manual included.
$85.00 plus shipping from 61559 Thanks Larry WA9VRH

I bought this for an old Dentron amp someone gave me. I think I used it a whole day when the amp decided to die. So I really don't need the interface anymore. It's got the cables, original box, instructions. $20 takes it off my hands and I'll even pay the postage to get it to you. First e-mail gets it.

2684. HF rig advice sought

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-26 00:06:44 UTC
From: japalese@aol.comnojunk
Message-ID: <20010825200644.07922.00002896@nso-cr.aol.com>
Source record: 55288

I am a casual operator. On the ham bands I use digital modes (Pactor & RTTY primarily) and SSB. I am also involved with the CAP and use SSB on their radio network.

I am trying to decide how much I need to spend to get a good solid radio, with a good receiver (able to pull weak signals out of the weeds) and nice xmt audio.

I would like to keep my purchase to around the $1000.00 mark; can spend more but don't think I operate enough to justify the extra $$$$.

Here is what I have found so far:

FT-990s with all filters and TCXO (needed per CAP regs) for $1000.00 to which I would consider adding Timewave's DSP-599zx.

TS-690S/AT $650.00. Filters and TCXO need to be added. Same DSP-599zx comments.

TS-850S/AT for $850.00 to which filters and TCXO need to be added. Same comments about 599-ZX.

IC-736 for $895 to which filters and TCXO need to be added. Same comments about 599-zx. Have heard this rig is just so-so in digital modes due filtering compromises.

TS-870S with TCXO for $1500.00

IC-746 adding TCXO and filters. Has some built-in dsp and limited xtal filtering.

So far, these 6 rigs are in the same ball park money wise, with the 746 being the only new radio.

Next step up the ladder--
FT-1000MP for around $1700.00, but filters and TCXO need to be added.

TS-2000 (computer controlled only) for $1800.00, tcxo & DSP filtering built-in, no xtal filters avail. According to AES this rig has same HF performance as TS-870S with dsp filtering updated and improved over the TS-870.

FT-1000D for around 2K, all filters and TCXO included. Would the DSP-599zx be needed with the multiple layers of xtal filters here?

IC-756 Pro for around 2100, tcxo & DSP filters built-in, no xtal filters avail.

These next 4 rigs are in the same ball park money; only the TS-2000 is new.

What words of wisdom do you have to offer. How do the numbers on a spec sheet (test results under ideal conditions done by someone hoping for the best) compare with real world use?

I just passed my Tech liscencing about a week ago, and while waiting for my callsign, I am window shopping for a radio. One area that has caught my fancy is satallite DX. I see that there's a satallite that uplinks on 2m and downlinks on 70 cm. Can anyone recommend a multiband radio to handle this task? I've seen a couple, the Yaesu FT-100D, and the Icom IC-706 Mk IIG. Both will work in these bands, as well as 6m, and HF when I upgrade later to a General class.
Thanks for the assistance.
Bob

2689. WHO FIXES OLD KDK RADIOS ????

Newsgroup: rec.radio.amateur.equipment

From: rong@computer.net
Message-ID: <3b88755a.1592872@news.computer.net>
Source record: 55293

Hi All,

I have an old KDK 2016A that developed a receiver problem--no
sensitivity. I can pickup my own HT on it, but cannot pick up our local repeater
that used to be almost full scale on the S-Meter. If I open the squelch, I can
barely tell that a signal is present. Evidently something in one of the initial
RF amplifier stages has gone south. Is there anyone left that can get parts and
fixes these relics ????

From: rong@computer.net
Message-ID: <3b88d153.2506916@news.computer.net>
Source record: 55296

Hi All,

My old KDK 2016A finally crapped out after 20+ years of great service. I use it from home for 2M repeater rag chewing and for packet. It has a jack on the back with PTT, Mic input, and speaker output, which makes it great for packet.

I am looking to buy something more modern to replace it--maybe used (no more than a couple of years old), or maybe new. Are there any 2 meter rigs that have a jack on the back with the same functions available ??? This would eliminate a google of cables for operating packet. A mobile style rig would be desirable, as I have power available, but not much desk space.

Besides in terms of close signal spacing performance the MP is better than the MKV. In general terms the MP would be better value for money. The only problem with the MKV and the MP is the huge amount of phase noise. The International Radio Mod would be in order for either of these radios. So much for modern progress in ultimate performance, 3 steps forward and then 4 backwards, this would be the summary of the MKV performance.

Its all there in the figures, study and learn,

Willy

NEW never used air variable capacitor for sale or possible trade.
Sixteen rotors/stators with the rotors 3/8" apart and the stators are of
course in between. Do not know the manufacturer, but this thing looks
just like the air variable in the Palstar tuner
http://www.palstairinc.com/palmain.htm

I'm asking $50.00 or what to trade? I'm interested in PSK31 stuff now,
but what ever!

I presume you are looking for a new one. There isn't going to be $15 difference between high and low among the dealers becasue there just that much markup in the rig. Look at Texas Towers, AES, HRO, as well as a few of the other on line stores. I'd suggest buying it from your nearest/local dealer. He will be there when you need help.

Just say NO to 0.3 watts for a starter radio. You'll never talk to anyone and just cuss under your breath. Ask yourself if you really want a HT at all to begin with. Where are you going to be with it and what do you plan on doing? Look at a new or used mobile radio. Icom has one for $169 that goes up to 50 watts. Use it in the car or get a power supply and mount it in the house, or use it both ways and just move it back and forth.

Hello does anyone know how to reset totally my icom 706mk2

It seems to be broken ,it dont take memories in it and it dont remember the frequency when i

change band and come back ,when i reset it by up and down buttons and power on it seem to work

but when put memories it remember old frequencies what was programmed before restting????.

And when i power it of and on again it is in the same broken situation that it was before resetting.

Now i wonder is it really broken or is there more powerfull reset somewhere,and does anyone know it,if so

please let me know.

tnx and 73`s to all

Source record: 55214

I'm selling my Kenwood TS-50 with matching AT-50 antenna tuner. Both units are in excellent condition. Only very minor surface marks. Never mobile. This is an easy to use and very compact little rig and the tuner works like a charm - I've used it with dipole, G5RV, and delta loop and it works great. I've been using it as a base rig, but it would make a great mobile or field day/DXpedition rig as well. Set includes manual (with plastic covered manual), mic, DC cable, AT-50 connector cable and mobile mount. Original boxes and packing included. I'll sell the TS-50S by itself for $525 and the AT-50 for $225 or $700 for both.

I paid $1200 new. I'll pay shipping anywhere in CONUS. Will consider trade for newer full-size, HF or multiband HF rig.

Is there a 2 meter mobile rig that DOESN'T have these functions available? Not sure I understand your question. Do you simply want the jack on the back? Do you want a single jack that handles both ptt mike input and and speaker output? Never heard of that. Every radio I know of has a mike jack and speaker jack.

This radio works in every respect except the display. You can program frequencies, scan, receive, and transmitt, but the red display is blank. It comes on momentarily when the power switch is turned to either ON or OFF.

Has anyone incountered this in the past and recall if it was a common problem with a common fix?

Thanks

I'm interested in buying any parts, assemblies, or basket cases (not economical
to repair, etc.) in the Tektronix 492, 494, and 496 spectrum analyzer types.

Email me and tell me what you've got, if you're interested.

Please note, I'm not rich, I'm not in business, and I'm not interested in other
analyzer types unless they are 27xx series. So if you want a lot of money
for it, I'm probably not your buyer. But if you want to help out a ham
who likes to take on big projects for fun, give me a shout. Please.

Sound advise unless you live somewhere like LA where there's a repeater
on every block (or so it seems). If you can readily access repeaters
using low power, Radio Shack has their palm-size 2-meter only on sale
for $99. It has most the whistles and bells including 30 memories and
scan but only puts out 0.2 watts on AA batteries or 2 watts on 9 volts.
I just bought one so me bride can guide me parking the motor home.

While not absolutly necessary but most helpful if you get two radios or one made especailly for the sats. You will almost need to be able to receive on one band while you transmitt on the other. That way you can tell if you are getting into the sat and one 'standard' is to change your transmitter frequency to compensate for the doppler shift of the frequency as the sat passes over. If you don't want to invest in seperate rigs , you could get a used transceiver or receiver for the low bands and use some converters for receiving.

Yes i have a operating manual ,but the normal reset (up and down key and power on) does not help...
question was is there any "bigger" reset available what is not told in the manual.

Selling my Yaesu FT 290RII two meter all mode. The rig is in good shape, and works 100%. Full 25 watts . The 290 comes with mic, manual, mobile bracket, snap on amp and battery pack, carry case, and antenna. This is a great mobile sized rig. I'm asking $250 plus shipping from 55109. If interested contact me at kknickelson@mmm.com

Thanks and 73,
Kevin N0KQ

Opinions expressed herein are my own and may not represent those of my employer.

2734. AALog 2.0 is released

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-27 17:49:36 UTC
From: Alexander Anipkin <rz4ag@yahoo.com>
Message-ID: <9mqsja$3n33f$5@ID-52750.news.dfncis.de>
Source record: 55088

Please look for new version of AALog - HAM logger.

It's powerfull and very easy in use logger.

AALog is No. 6 in the world and No.3 in Europe by the 425DXN most used
Logging Software survey.

Try it!

Before 1st September 2001 price is $35.

Visit http://www.dxsoft.com or http://www.aalog.com or
http://www.hamport.com for details.

Direct link to AAlog is http://www.hamport.com/aal2.zip

With help of the AAVoice, TrueTTY, CwType, CwGet you get the most powerfull
set of HAM tools.

Source record: 55239

1. IC-2AT, matching speaker mic, BP-3 battery with new guts, leather case, rubber duck antenna, manual and schematic, works good. $125.00, shipping included conus

2. Alinco DJ-X10T hand held communications receiver. Mint condition. Many extras totaling new over $500.00. will take $325.00 plus shipping conus

3. Mirage 6 meter 10w in 150w amplifier with preamp. Works very good and looks good too. I don't know full output of amp as I only used a Ten Tec 6 meter transverter with it and had about 7 or 8 watts drive. $175.00 plus shipping conus.

4. TenTec 6 meter transverter. Like new. I bought it assembled and tested from factory. Manual. Used with above amp and got about 140 watts or so on 6 meters. $150.00 plus shipping conus.

Check out http://www.hi-rescom.com look at the PDC-1 kit. It works FB in my Bird 4410, and easily adapts to almost any average reading meter, including the Drake. For $19.95 it's hard to beat compared to over $100 for the Bird kit.

2753. FT-847 Mic Question

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-28 17:13:01 UTC
From: Dan <danandalison@bmi.net>
Message-ID: <3B8BD11D.4030805@bmi.net>
Source record: 55193

Hello,

I have an FT-847 and am using the desk mic MD-100a8x at our school club station. I seem to recall some postings awhile back about the mic. I get terrible audio reports. I have sent the mic back and received a new one and I am still getting the same audio reports. The had mic works much better! I think it has to do with the settings but can't remember from the postings (about a year ago or so). Can someone remind me about the fix for this?

Thanks,

Dan

You can get an adapter at Radio Shack to help you adapt either way. From Stereo to Mono or From Mono to Stereo. Check them out.

2756. FT: Drake TC-6, TC-2 and CC-1 with SC-6, SC-2 and xtal cal

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-28 19:56:34 UTC
From: Bill Abate <wabate@dandy.net>
Message-ID: <4rtnot86no85qinuhajbbd0dja7pn80oai@4ax.com>
Source record: 55158

I am making room in the shack for some new boat anchors. I was going to put this Drake setup in storage but I thought some collector might be intetrested. Both transverters work well. I tested them myself and got 120 watts out on 50MHZ and about 90 watts out on 144. The converters oscillator both work because they drive the tranverters. I never got into the receiving converters any further than that. Got side tracked with other things.

I put a light spay coat on the CC-1 cabinet. The TC-6 could use the same. The TC-2 needs some cleanup of minor surface rust before spaying. The front panels are all in very good condition. No holes or mods. I have the power cables for both transverters. The AC-4 is not included. You use the one with your Drake Line.

I I'd be interested in a Collins RE amp or Collins ?? +\- $. I have all the Drake gear I need. I don't intend to auction it but past eBay prices are about $1000. No low balls please. I don't want to split this up. It was too hard putting it together.

73,

Gidday All,
I have a friend out here with a TEK 495 Specy that
has a dead PS.

The Stud Mounted PS Transistors on Main Power Supply Board A30 have
expired !!!!

They are Q2061 & Q2071 with the TEK proprietry Part Number
151-0703-00.

From what I can see on the dud Transistor it has what looks like the
Motorola symbol alongside the TEK Pt Nr. These are a fairly old Case
Style with a physical format similar to TO-9 !

Does anyone have any ideas as to an OEM Part Number please ?
I'd expect the Specs will be in the order of 200 volts Vceo & 10 Amps
or more I'd guess.

Cheers & thanks in anticipation.

Alan,
Melbourne, Australia.

Hi,

I have just added a great article on 'Miniature Magnetic Loop Antennas' by By David Posthuma, WD8PUO, to the Elecraft web page. Dave has done a great job describing his experiments and results with these antennas. The article includes pictures and diagrams of his designs.

You can find Dave's article in our Elecraft monthly 'Tech Notes' section at:
http://www.elecraft.com
There are links to this section on the left and right side of our main page.
(Look for the small loop antenna picture on the right.)

I have several more great articles to format and post to the page too. (On transverter interfacing, RX filter optimization etc.) Stay tuned..

Hi:

I have a NIB Alinco DX-70TH for sale. This rig was won at a hamfest by a co-worker.

I bought the rig from him for my Dad--who never took it out of the box--he has lost interest in ham radio.

$550.00--cahsiers check or money order-- including insured shipping.

I would also consider trading it plus some cash for a TS-570S(G), IC-746, TS-870S (s/n over 807xxx) or FT-1000D (or FT-1000 if it is close to a 'D').

Does anyone know if this company still exists? I recently aquired a Model V70 VHF amplifier from them and need parts.

If this company does not exist anymore, does anyone know what model number of switches are used for the mode and power switches? The two on this amp are broken and do not have any type of part number on them. They only have voltage/amperage ratings and Carling written on the switches.

I can provide pictures of these switches if need be. I am really looking for a direct replacement that will fit into the spaces currently occupied by the broken switches. Thanks a bunch!

From: shawk@mc.net
Message-ID: <3b8c601f.3795275@news.mc.net>
Source record: 55174

Can anyone help me align this alinco dr-600? I am trying to set the output power on 2mtrs. It puts out 50 watts at 148.000 and 20 watts at 144.000. The radio is specd to put out 45 watts across the band. I have the service manual for it, but when I adjust the trimmers like the book says, the output gets lower. I can not seem to center the power output to the center of the 2mtr band.

Could this be a cronic problem with this radio?

Any suggestions?

Source record: 55179
Cross-posted to: alt.ham-radio.vhf-uhf,free.uk.amateur-radio,rec.radio.amateur,rec.radio.amateur.equipment,uk.radio.amateur

Hi people. I need some help on the following:

I have an ICOM IC-2SE VHF handheld transceiver with a BP-82 battery pack and a FA-140BB antenna. The unit has been left unused for a number of years, and it now refuses to function (or should I say "boot"?). No indication appears on the LCD screen, and no sound is heard from the speaker.

As it is a digitally controlled unit, I was wondering if it could be a matter of it losing its embedded control code, due to the long period of rest and lack of power supply to its electronics (roughly two and a half, to three years). I had tried to use it in the past, and had noticed that the LCD display was weaning and the memory settings were -if memory serves- lost.

Have any of you encountered, or heard of such a problem before?
Would you know what could be done to remedy the malfunction?
If my diagosis is incorrect, is it possible to reset the unit?

I would be greatfull for any help or suggestion. It is a lovely little thing and I would hate losing it.
I could also use any URL link you may know on the subject of ICOM IC-2SEs.

TIA
Manos Petridis

Yaesu rotators are made by Kenpro Rotators of Japan. Actually i believe Yaesu now owns Kenpro Rotators. How does this help you? Well you will find that the current Yaesu models are actually just the top of the range Kenpro Models. You might try and find a Kenpro distributor near you and ask them.

Good luck

FT: Computer gear for HF Rig / equipment

I have the following computer gear available for trade or sale on a "newer" HF rig and equipment.
Specifically interested in the below units but open for other suggestions

* Kenwood TS-50S, TS-840, TS-847, TS-900
* Yaesu FT-100, FT-840, FT-847
* Icom IC-706 / 706 MKII / 706 MKII-G
* Alinco DX-70 / DX-77
* or ??

What I've got.

// Compaq Deskpro Server - $400
400 MHZ, 128 MB Ram, CD-ROM, 8GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. Tower case. More ram is available.

// Compaq Deskpro Desktop - $375
350MHZ, 128 MB Ram, CD-ROM, 5 GB SCSI-2 HD, 10/100 NIC, Adaptec Ultra Wide SCSI Card, AGP Video, Mouse + Keyboard, Windows 2000 Professional. 400 MHZ processor available. More ram is available. Desktop case

// Compaq Deskpro Desktop - $375
350MHZ, 128 MB Ram, CD-ROM, 6 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard,
Windows 2000 Professional. 400 MHZ processor available. More ram is available. Desktop case.

// Compaq Deskpro Desktop - Small Form Factor - $350
466MHZ, 128 MB Ram, 8 GB HD, 10/100 NIC, AGP Video, Mouse + Keyboard, Windows 2000 Professional. More ram is available. Small form factor case, very small footprint.

// Sun SparcSERVER 10 - Unix - $325
50-MHZ RISC processor, 96 MB Ram, 4 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Sun SparcSTATION 5 - Unix - $275
70-MHZ RISC processor, 64 MB Ram, 2 GB Hard SCSI Drive, CG 6 Color frame buffer, On-board fast SCSI controller, On-board 10-100 base T Ethernet, On-board Sound, additional fast SCSI controller, additional 10-100 base T Ethernet controller, Mouse + Keyboard. Excellent webserver, file server and strong Unix operating system. Machine is running Sun Solaris (preferred) or any flavor of Linux ported for the Sparc platform. Aurora case.

// Hewlett Packard Rack Mount Network Hubs - $75 (each)
4 available, 2 14 port and 2 15 port hubs. All are in excellent condition and recently removed from service. These are rack mount servers.

// Proxima LightBook LB20 DeskTop Projector - $425
SVGA and RCA inputs, 200 ANSI lumens, Serial jack, Computer in jack, Monitor out jack, Video in jack, Audio in & out, TV output, Twin Lamp, True SVGA compatibility (800 x 600), International power supply, LightBoard drawing tool, Remote control, Lightweight (11 pounds - 13.5 x 9.25 x 5 inches), Custom padded case. This unit is in excellent condition and includes all the original equipment(cables + books).

If you see something you like, please let me know. I am open to trades or sales on any of the machines. Willing to trade multiple machines for the right gear. Response via Email is preferred.

Sales always welcome ...

Thank you!

2795. Is iambic worth it?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-30 00:34:42 UTC
From: Jon Ayscue <ayscue@toad.net>
Message-ID: <B7B30262.252%ayscue@toad.net>
Source record: 55098

I'm planning to get back on the air after a LONG absence.

Here's my question. Since my cw skills are pretty rusty, I'll be starting pretty much from scratch on using a paddle.

Should I think about switching to an iambic paddle, or is my old non-iambic paddle good enough? If iambic keys have a real edge in either sending ease or less fatigue, I'm game to get a new key and learn to use it. If there are no clear advantages, I'll stick with my old paddle.

For what's it's worth, I was never the fastest cw guy on the block. 20-22 wpm was about my fastest copy.

regards

Jon Ayscue
KC3OU

I'd say go Iambic, the fist will sound much better than any straight key, more presise too. Much easier on the RX end, better copy, less mistakes. I wish everyone would use it.

2797. DATA PLUG WIRING

Newsgroup: rec.radio.amateur.equipment
Date: 2001-08-30 01:23:23 UTC
From: rong@computer.net
Message-ID: <3b8d94f4.5316602@news.computer.net>
Source record: 55142
Cross-posted to: rec.radio.amateur.equipment,rec,radio.amateur.digital.misc

Hi All,

I just got a brand new Yaesu FT-1500. I want to hook up my PK-232 TNC to its data jack. In the manual it gives the pin outs for the jack, and on the schematic it shows a diagram of the jack and the position of the terminals. However, it does not say if the diagram is shown looking from the outside or from the inside of the radio. Has anyone figured this out ???? How on earth do you solder your cable onto the pins of the mini din 6 pin plug--it's so small, and the pins are solid--not hollow like a standard din plug.

Source record: 55100

I think he meant whether he should switch from non-iambic keying, i.e. a Vibroplex key/electronic keyer combination, not a straight key, to "squeeze keying". If you're going to stay at the 20 wpm horizon it may not be worth "retraining" yourself to squeeze rather than "swipe". Either method produces the same output, of course quality is operator dependent regardless of keying method.

I hope you are reading these replies closely.

The previous sender is right. If any part of a business transaction takes place through the US mail, then the postal regulations (laws) apply.

Mail fraud is not to be taken lightly. People think that they can defraud others without consequence. However, what they do not consider is the statement above about any part of a transaction.

Question: Name the penalty for each occurrance of mail fraud...(tick, tick, tick).

Answer: Ten years in a federal penitentary AND, as a bonus, $250,000 fine PER OCCURRANCE! Wow!! What a prize!!

So, the answer is: any time you do ANY deal over the internet, you DEMAND a US Postal Money Order, MAILED to you,. or you MAIL a US Postal Money Order to the future felon, and then, if you are defrauded, you send printed copies of ALL emails (what???, you didn't print all of them out????) to the Postal Inspector, and charge the thug with mail fraud.

God, I love it when the Feds knock on some turd's door and make him soil his underware!!! He will probably be happy to make YOU happy rather than face some federal magistrate!!!

I am not kidding...I once made some Canadian crap in his jeans when the RCMP knocked on HIS door and informed him that mail fraud in Canada was MORE than a felony, it was "An offence against the Crown". (I wonder, would they have hanged him in the "Olde Bailey" in the tower of London???, or amputated his miserable head??? Either way, I would have been happy...he was a miserable SOB..pseudonyms and callsigns available on request).

~~~~snip~~~~

As the address is Lexington, this may be a coincidence, or the same
guy under a different guise. I believe he has traded on ebay under
different names in the past.

If anyone has been defrauded - like me - then have a look at
http://www.radio-scanning.fsworld.co.uk/zachary_guinn.html

I have contacted the US Postal Service and any other poor victim can
download the necessary form at www.usps.gov/pdf/ps8165.pdf

I know that a few others have received a refund by persistence.

If anyone wants more info, or cares to submit info for inclusion on
the web page, please contact me direct.

Cheers.

Regards,

Dougie

This is a very nice Triton IV. It has been recently overhauled at Ten Tec (over $250 work, will include paperwork with sale). This Transceiver has the optional CW filter, and extra crystal for the full 10 meter band. Includes original manuals and power cord. Good audio, and well known as a great CW performer with QSK. Covers 10 meters, 15 meters, 20 meters, 40 meters and 80 meters. 100W, all bands.

On sale at ebay, at a low reserve price!

The bill for the new TS-870 came. I now have for sale a mint TS-570DG with the optional SO-2 TCXO and the 500hz CW filter installed. No scratches, scuffs, dents, or smoke residue. Have factory foamed box, hand mic, and manual. Check out my feedback at Ebay using my call as user id. No surprises here, just a great radio in great shape. Will ship double boxed and insured to lower 48 for $825. If you don't want the cw filter $775 shipped. Postal money order only. I can take visa/mc via Paypal but buyer must pay all fees (2.9%) Save the tire kicking and the low balling for the car lot. Serious inquiries only please.

I "swipe" an iambic keyer for the most part. So even if he bought a
new iambic, he can still use his old method if he wanted to. To answer
his question, I think it would be up to him. If he does fine with what
he has now, I can't see much sense in changing unless he wants to try
to use "squeeze" keying. I'm a bencher fan myself. I use an iambic,
but I don't squeeze that much for some reason. I'm s swiper, probably
because I used a bug for a while before the keyer, and got used to it.
You can send fast swiping. I was doing 50-55 wpm at one point, but
I've slowed down a bit in the last few years cuz I don't work as much
as I used to. MK

From: Brenda Ann <brandad@kornet.net>
Message-ID: <9mmavgfop1@hiline.shinbiro.com>
Source record: 55123

Time to try this again. :)

I have an Icom IC 24AT with an audio problem. A little history may be in order first. When I got the radio, it had receive audio, but no display, no controls, other than squelch and volume. I opened the unit up, found some broken solder connections to the control panel, reset the CPU, and the display and controls came up, but my receive audio was gone. I have tried the obvious tricks of plugging in an earphone to see if there is any output from the EP jack, to no avail. The radio does have TX audio. I have looked carefully at the area where I reconnected the broken solder connections, and there are no bridges or other anomalies that I can see. If anyone has any idea where I can look to fix this problem, or has a schematic for an IC-24AT that they can e-mail me, I would greatly appreciate it.

Source record: 55127

I just obtained a Kenwood TS-850. I have noticed on transmit, maximum output is only 80-85 watts, current pull is a maximum of 16 amps or so. The rig was rated at 100 watts output at 20 amps. I checked vs other rigs I have and the 850 has less output. Is 80-85 watts output normal??? nothing to worry about or attempt to get fixed??? The max output is with perfectly tuned antenna with or without internal tuner.

It should do 100 watts normally, and there is an adjustment to run it a
bit higher than that (not recommended, but possible).

Perhaps the adjustment has been turned down? Check the manual for
location.

Just call Yaesu parts and get the right one, no guessing.

I don't have the 800 number handy but do a www search.

You can also write them and they will send you the part number and the
phone number to call. Nice folks.

Check the power cable voltage drop.

The radio may be rated at 100 watts at 13.8V DC at the radio, but you may be losing some voltage between the P/S and the radio.

As a cw op for around 38 years, pro and am, I'd say stick with what you learned with.

When I built my first keyer (W9TO) iambic didn't exist. Thus I learned on a single lever Vibroplex after using a bug
for a long time. Even today, I just cannot squeeze key at any speed approaching what I can do with the regular vibroplex.

I use the single lever Vibroplex on everything.

If you have never used a keyer before, it may not make much difference, you can learn either way. In theory, squeeze keying is more efficient, but most people I've seen squeeze keying don't do it for the best efficiency anyway.

With self completing dits and dahs, squeeze keying is more critical as timing must be more precise to prevent slippping in an extra element.

Have fun!

Source record: 55135

You might email Icom America at amateur@icomamerica.com

I seem to remember there was a ground trace that would burn open under the earphone jack. This happened when one was attempting to use the 12 volt external power and would accidently touch the earphone ground with 12 volt supply. One fix was to make sure the ground side of the speaker was grounded to the main board foil, but the real fix was to remove the earphone jack and use some # 30 wire and re establish the ground trace under the earphone jack.

Make sure you have a good battery on it and then reset the cpu. The memory back up battery is a rechargeable Lithium battery. That memory battery dies in about 7 days if no external battery is being applied. The cpu then stops in some undefined state and doing the reset should power up the radio again.

The problem with this trade is that you're selling obsolete computers at their 1998 prices. Radios don't depreciate in the same manner as computers do, so I doubt you will get to sell anything unless a sucker falls for it.

Use a BNC cap available at most connector sales sites or use a BNC
termination which can be obtained at any good computer store.

Not sure if it would cause problems, but you could try an old 50 ohm
thinwire Ethernet terminator--if you can find any. Or if the idea is
simply to keep dirt out, a BNC barrel connector might do.

Well you can get BNC dust covers but what I use is a 50 ohm dumy load
that protects the BNC female on the radio and the finals if you goof.
In fact I use on on the SO-239 when that is not in use.

If you have never learned to send with an iambic keyer, I'd say stick with what you are used to. However, I learned to use and iambic keyer (the Brown Bros. pivot key), and would never go back to a single paddle. Once you learn to use an iambic keyer, you'll probably never go back.

Not sure if the plug is the same but many times the plugs are found on computers and other devices. Look at a mouse that has the ps/2 plug on it and see if it will fit. You can usually find the mice for 2 or 3 dollars at hamfests and computer shows. Cut off the cord and use it. Same for the some mic connectors that use the rj45 plug. Get the networking cords and cut off what you need. Most of the rigs are low impedance and a few inches of unshielded wire will not usually make any differance.

It should put out 100W except on 10 meters where it's 90-95W. I believe
you adjust VR7 on the RF board - but verify this before you tweak anything.
I would also first verify the output with a dummy load and an external
power meter.

I just ordered and received four manuals from W7FG. In my case, a service manual for a Kenwood TH79 would have cost more like $40; I had no problem paying $21 to W7FG. His products are top notch. Schematics are crystal clear. Even the board xray views show the traces in gray scale, so you can tell which ones are on the component side. He even included some technical bulletins from Kenwood that shows things like MARS modifications. About the only thing that looks at all like a copy are the photographs, and they're a real bitch to do properly under any circumstances.

There's also ManualMan, but I don't know what his prices are.

When you add up all the time it'll take you to stand at the copier, then fold and/or join all the large schematics, plus bind everything, then pay for shipping, and you'll probably spend more than the manual is worth. Someone has to pay for the paper and toner and electricity for the copier at work you're gonna use. Pay the guy his $25 plus shipping, let him do all the work, enjoy the results, and be a happy ham instead of a complainer.

Well, I have the solution to my problem. I needed to hook up my AEA PK232 to my new Yaesu FT-1500. The radio has a mini 6 pin din socket in the rear for data. Well, I went to Radio Shack and bought a mini 6 pin din plug--Have any of you tried to solder 5 wires onto a 6 pin mini din plug---IMPOSSIBLE. Many of you E-mailed me and said to find an old broken keyboard with a PS-2 plug--it's a 6 pin mini din---couldn't find any. So, I looked again in the R/S catalog, and lo & behold, they have a PS-2 keyboard extension cable--PROBLEM HOPEFULLY SOLVED. I"ll find out tomorrow morning when I go over there to buy it. I hope they have it in stock. Thanks to all for the helpful hints.

Yeah, an extension cable does the trick. I got one at the local
computer store for $4 when I needed one; see

http://www.dioxine.com/~dana/ft847_pkt.html

for how I made a cable for my FT-847; I suspect all the modern
Yaesus use the same connector for packet.

Easy as pie.

One more thing.I seem to remember.there are 3 contacts on the bottom of the radio there is a "-", "+", and " e" terminals. The " e " is used for recharging. So long as there is no power cord attached to the top of the radio you should be able to measure a dead short between the " - " & " e " terminals. If it is open then the most likely trouble is the DC jack shorting switch is open and you will need to replace the DC jack. It should however work for direct DC once you reset it. Lastly there could be a problem with some diodes on the PRT unit with in the radio.

I'm looking at using one of the newer 2.4 gig video transmitters for kite and R/C plane video instead of a 1 watt 440 ATV transmitter.

Any recommendations + or - on the current crop? And what kind of range are they good for. Some claim output power of 100 mw or more.

73,
Jim

I got some small caps from an auto parts store made for slipping on the end of vacuum hose. They had a few sizes, I bought a couple of different packages to find one that fit just right. Cost about $1.69 for 5 :-).

I have a Shure 444D mic and I would like to install the Heil HC-4 element in it.
I am not quit sure which two wires inside the head to use with the Heil.
Looking at the base I can't figure this out or with an ohm meter. I know I need to bypass the impedence switch.
In the head there are 3 wires ... red, white and black. I need the audio and the ground, does anyone know which 2 are those.

Tnx

Source record: 55085

For Sale - Icom IC-756PRO in excellent condition - non-smoker. Recently

given full check-out by AES. Has been used sparingly only to work DX on

75 and 160 during the Winter 2000 DX season by drivng a big amplifier - so it has had an "easy life"! There are no extra internal options needed since this radio is factory "loaded" with digital 3rd IF, DSP and

filtering. If you haven't used DSP and digital filters powered by a 32-bit microprocessor, then you have been missing something!

Complete with Icom IC-756PRO Service Manual (book - not the CD ROM version), user manual, hand mic, power cord and original packaging.

Need to make room for new equipment - asking $1900.00 firm including UPS

Ground Insured shipping to your domestic US destination.

The bill for the new TS-870 came. I now have for sale a "mint"
TS-570DG with the optional SO-2 TCXO and the 500hz CW filter installed
(options alone cost $284 at Texas Towers). No scratches, scuffs, dents,
or smoke residue. Have factory foamed box, hand mic, and manual. Check
out my feedback at Ebay using my call as user id. No surprises here,
just a great radio in great shape. Will ship double boxed and insured to
lower 48 for $825. If you don't want the cw filter $775 shipped. Postal
money order only. I can take visa/mc via Paypal but buyer must pay all
fees (2.9%) Save the tire kicking and the low balling for the car lot.
Serious inquiries only please.

Another solution would be to pick up a 'used' mouse at the local
GoodWill Store, Savers, or the such _with_ that style plug (PS/2).
It's almost a given that it'll be defective - but, if all you want
is the cable + molded plug, it'll probably be just the ticket and
at a decent price.

Source record: 55096

Be careful with recycling something with a cheap cable, since
PS/2 mice and keyboards do not use all of the 6 lines. It's
possible that a low-cost item may not have all of the 6 lines
present. My solution was to get an extension cable in hopes that
they'd typically have all 6 wires present - which was successful.

I have for trade, a collectors grade ICOM IC-765 HF Transceiver (ser. 48xx) which is in factory condition. All upgrades done by ICOM. Radio was fully operational however on spec. I had the radio checked out and realigned by ICOM Canada in May of 2001. It has been my backup radio and has seen very little use as its second owner or during its stay with its original owner. Classic beautiful example of the model. Radio is stock with standard Icom filters. No mic (did not come with one late in 765 production).
I would like to offer this radio in trade for a near new IC-756PRO. Must be a very recent serial number unit and it perfect condition. Only interested in a PRO, thanks. Value difference negiotiable. Color photos available on request.
Please email me if your interested in a trade, or would like additional information on this fine radio.

Message-ID: <b0455d59.0109020627.33bccbcb@posting.google.com>
Source record: 55022

I just purchased a used FT-50RD. The unit did not come with a nicad charger so I'm trying to test it out using external dc power from a cig adapter in my car.

When I enter a frequency to transmit on the frequency displayed blinks continuously. I can't find anything in the manual or on the internet about why the frequency display would blink like that.

I'd like to think I didn't get screwed on this purchase.

Also, does anyone know if the battery should charge via the external dc connector?

Can anyone help?

LAST DAY BEFORE EBAY..!!

The bill for the new TS-870 came. I now have for sale a "mint"
TS-570DG with the optional SO-2 TCXO and the 500hz CW filter installed
(options alone cost $284 at Texas Towers). No scratches, scuffs, dents,
or smoke residue. Have factory foamed box, hand mic, and manual. Check
out my feedback at Ebay using my call as user id. No surprises here,
just a great radio in great shape. Will ship double boxed and insured to
lower 48 for $825. If you don't want the cw filter $775 shipped. Postal
money order only. I can take visa/mc via Paypal but buyer must pay all
fees (2.9%) Save the tire kicking and the low balling for the car lot.
Serious inquiries only please.

I was in the business for about 11 years. Mainframes (radios) are
discounted and accessories are generally sold at factory suggested list
price. Unless the accessory is a more expensive item it is usually not
discounted very much if any at all.

I changed one of my channels to work with a repeater. Not the conventional offset. Above that freq now reads -+. I can't get it back to SIMP.

When I go to the repeater setup, I can't change it out of DUP. Normally I can set it to -, +, or SIMP.

Any suggestions???

Thanks
Chris

I'm not sure about the blinking display, although it's possible you entered an out-of-band frequency. The radio can be programmed for Euro band plans, and if so, you may be entering an illegal frequency.

The external DC connector will charge the battery...in fact, that the way it's supposed to be charged. The charger generally runs about 15 volts, and you can see the voltage on the display by setting Menu #4 ("SUB") to DC.

Source record: 55045

Hello Jon,
It's a very personal preference and depends what type of bug keys you used in the past.
If you used mechanical bugs or simple (non-memory) electronic keyers employing two or three TTL IC's, then you need to be a little cautious.
I had real problems and after four years of trying, gave up and went back to my old mechanical Mc Elroy bug, it has a mechanical dot-anti-bounce device and does all I want.
I had used a Vibroplex for some 20 years from being licensed. The problem is I'm used to defining the length of Morse elements and the several el-keyers I tried did not allow that. If you don't release the paddle BEFORE the current Dot or Dash completes - the keyer registers another element, so you can easily lose control.
It's not all bad news and keyers on the market today often have provision for Turning the Dot/Dash Memories OFF. But I suggest you test drive any e-keyer before you buy, make sure you are comfortable with it.
People who have never used a bug key before find it much easier as they do not have old ingrained habits. Dot/Dash memories need a different 'touch' and on the air you will hear many operators in the middle of their sending, losing concentration and running out a stream of gobbledegook.
If you have to really concentrate to send Morse, you have a problem. Morse should be as much a sub-conscious activity as possible.
The concept of Iambic is great and squeeze keying will save a great deal of effort, even over traditional bug keys. Don't be put off, just really try various systems and find one that suits you best.

Speed isn't a consideration bugs save effort fast or slow but do come into their own for prolonged high speed CW.

Good luck and I hope to meet you on the CW end. 73 Denzil G3KXF.

2937. IC-718 AGC circuit diagnosis

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-03 02:39:01 UTC
From: ricknj10@hotmail.com
Message-ID: <3b92ea12.51591197@news.eclipse.net>
Source record: 55038

I have a new Icom IC-718 and I notice that the AGC seems to me to act too fast on SSB. I notice it especially when there is heavy QRN, seems like the receiver gain is popping up and down with the noise. Also I notice it pumping on loud SSB signals like on 75 m at night. If I drop down the rf gain it clears up, and I don't notice the noise pops between words or syllables. The rig has no user selectable control of the AGC, either on the front panel or via menus.
I studied the schematic to see if there was a place I could put in a little larger cap to slow down the AGC delay time. Actually the AGC circuitry seems rather straightforward except for one section that I can't seem to figure out.
Q1805 is the agc amplifier transistor that feeds the IF stages, that I can see. And it looks as if there are three dual transistors stages (Q1801-1803) that might act as switches to control different time contant capacitors, maybe for slow, medium, fast agc. What I can't figure out is how they are controlled.
If my guess is correct, they are controlled by a cpu (fat for am, medium for cw, slow for ssb?).
Any ideas?

Rick K2XT

2938. Is this power supply noise?

Source record: 55039

A high pitch whine is noticable on the upper part of 20m
when my computer is on. I don't think its the monitor as
this happens with the monitor on and off.

The tricky part is that sometimes when i reboot the machine
(cold boot) the noise goes away. On times when it does
not go away, during the bootup while the Windoze startup
screen is being displayed, the whine will stop for about one
second and then start up again, just before windoze shows
the login screen.

So, is this a sign of a power supply with no filter?

Your best bet would be to just pick up the phone and call Amateur Electronic Supply, HRO and/or Texas Towers and ask what they stock in the way of a 6-mtr rotatable dipole, halo, or even a small beam.

You could also build a rotatable dipole fairly easily: get some aluminum angle stock from Home Depot, cut it to frequency, attach it to a centerpiece of wood, and attach your feedline to it. I built a 6-meter ground plane in such a manner. Not that difficult.

Sounds more like your computer monitor. The scan rate is different during the bootup splash screen than it is when it has finished booting and displays the logon. Most likely it is the HV section or the monitor screen that is eminating high harmonic waveforms that are being received by your HF receiver.

2952. Reception problem

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-03 11:11:18 UTC
From: jim <jim.val@mindspam.com>
Message-ID: <9mvoqrqp1@slb7.atl.mindspring.net>
Source record: 54955

Quick question...

I recently setup my new Winradio 1500i. I want to listen to offshore and inshore maritime/marine vhf (156-163Mhz) here in Florida. I am 1.1 miles (1.8 kilometers) from the shore and even closer to the waterways. Reception is poor.
The transmissions I can recieve are...
-NOAA Weather
-Base stations(ie: marinas)
-Nearshore vessels broadcasting on "high" power (25watts)(ie:towboats)
My antenna is mounted on my roof (15'/ 4.5 meters)high and specs. are below. Geographically I have some buildings and trees between my home and the ocean, otherwise the terrain is flat.
I would like to hear more! Any suggestions? What would be a better antenna for this band of frequencies? More height? Please Help!

ANTENNA - 10' (3 meters) VHF MARINE RADIO 6DB GAIN BASE STATION ANTENNA VSWR LESS THAN 1.5:1 OVER A 5 MHz BANDWIDTH AT ANY FREQUENCY SETTING
FREQ. RANGE 136 - 174 MHz
POLARIZATION VERTICAL,6 DB GAIN
GROUNDED 5/8 WAVE OVER 5/8 WAVE
POWER CAPACITY 200 WATTS
40' RG-213 cable

Thank You!
-Jim
Fort Lauderdale, Florida, USA

Have you checked the viability of the coax? Check it to make sure there are no shorts between the shield and center conductor of the coax. Do this with both ends of the coax disconnected. Also, sounds like you have more than one connection to your Winradio, make sure the antenna is connected to the proper one.

It is the video board, there is a crystal on it for 14.318mhz, FM, which can
cover a large part of 20mtrs, + harmonics.
Mine does it too. I just shut off the computer while I'm on 20mtrs.

I am visually impaired. I can't see well enough to work on the clock.
Lightning struck nearby and literally blew the face off and melted the
insulation on the power cord. The clock may not be repairable.

I still don't buy into it being the monitor since it happens
with the monitor unplugged!

Also its the same noise during the bootup slash, it only
stops for about 1 second but then starts up again --
still displaying the startup screen.

Thanks for the idea though.

>Would you know what could be done to remedy the malfunction?
>If my diagosis is incorrect, is it possible to reset the unit?
>

Hello Manos,
I have an Icom V21AT HT that had the same problem, I was able to reset the radio by holding the {F} key down while sliding on a charged batterry pack, then turning power on. Dont know if this will work on your particular radio, but it was on the first page of my manual. Apparently the memory backup battery is a rechargable unit that only holds memory a couple of months if the radio hasnt been used. Mine also shows a reset code of holding down {F}, {A clr}, and {*} while turning radio on. Good luck ,
Mike

John, The charger that comes with radio is a drop in charger. The batteries I have are
6 volts and 9.6 volts. The charger transformer is rated at 8.7 volts and 14.5 volts at 70ma
You might try a lower voltage. With the battery off and looking at the back of the radio - right side up- the left terminal is negative - the center and the right terminals are positive. You can probably get a charger at Radio Shack that will give you the right voltages and currant to make a charger

Message-ID: <9n0bkonsj1@slb3.atl.mindspring.net>
Source record: 54968

An output (pass) transistor in the power supply (1 of 4) shorted, allowing 22.5 volts to my transceiver. The transistor is a 2N3771, and the circuit has four of these in parallel.

Can I just replace the one that failed, or should all four be replaced?

Thanks,
Dan

I'm selling my Alinco DR-1200T packet data radio. Rig is in excellent condition and performs flawlessly on 2m packet. Features include: 25w output, 14 memory channels, tone sq. (CTCSS), 3 scan functions, call channel memory. Can easily be converted for voice use with the addition of any Alinco or Kenwood compatible mobile mic (designed for packet, the rig did not ship with a mic).

Includes mobile bracket, power cable, manual and original box.

$100.00

Hi Dan,

I have a lot of Astrons in service and when one of the transistors fail,
I replaced them all because they usually fail right after a power surge and
or lightning storm. In my experience(YMMV), if one fails, the others will
follow.

Hello All

I have a Yaesu FT-747GX that will not
retain memory - VFO Freq or Mode when turned off
I have checked the Lithum backup battery
on the back of the display board and it shows
good (3.1v) also checked solder connection
and the display board is getting power from the battery

Is there any way to repair this problem short of display
board replacement ?

Thanks and have a nice one

No! It is the result of overwhelming LEGITIMATE complaints by Usenet users about the abusive practice of off-topic postings of eBay auctions to newsgroups where such postings are contrary to the newsgroup charter.

You will note that eBay does not have a policy against posting information about auctions or links to auctions in Usenet newsgroups were such postings are proper. The policy only prohibits postings that are contrary to the group charter and thereby abusive.

Of course if you can't tell the difference I guess we know the kind of person the policy was designed to reign in.

Hi All:

I get a high pitch whine through my HF rig also but my problem is from the network cards. I have 2 computers networked together in my shack and when data is being moved from one computer to another or accessing the internet, the whine turns into very fast shifting/on-off tones about every 50kc's apart on the 10, 15 and 20 meter bands. Sometimes the whine dissappears for a very short while, until there is network activity. Disconnect the CAT5 cable from the network card and the whine goes away. I'm probably picking up the RF through the network cable going from one computer to another. I wonder if shielding my network cable will work? I also wonder if data can be intercepted in this way?

Hi Houston and surrounding area Hams - we are working hard to bring you a great HamFest.
We have a "Wish List" where you can list the items you'd like the vendors to bring. We have electronic table signup, we have some terrific prizes, and some great demonstrations. For family members there is the Johnson Space Center, Space Center Houston, Wings Over Houston Air Show, the Kemah Waterfront and board walk, etc.

When: OCTOBER 20th
See www.clarc.org/hamfest.htm for all the details

To sign up for tables http://www.clarc.org/ereg.htm

What I want to know is, what gives Ebay the right to deny rights
delegated to us by our Constitution?

Before you can know that, you need to know more about the Constitution
itself.

Whatever gave you the idea that the Constitution says anything even
remotely related to what E-bay is doing? The Constitution prescribes
what *government* can and cannot do. It doesn't give you any particular
rights vis-a-vis E-bay.

2979. Kenwood TR-2500 tone encoder?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-03 19:22:06 UTC
From: Steve B <steve9@concentric.net>
Message-ID: <3B93D999.4A36A3AD@concentric.net>
Source record: 54982

Does the Kenwood TR-2500 2 meter HT have a built in PL tone encoder? I bought one, with no manual, that was advertised to have this feature, but don't see it inside. The only possibility might be that there is one single dip switch accessible thru the back of the case, and there is also a reset button. Is it possible to set the PL tone by cycling thru them by toggling that switch? Or does anyone know what the switch and reset button are for? I do have a manual for the TR-2400; in that manual they say Kenwood didn't manufacture the tone module but the rig had a tone on/off switch to control a customer-supplied tone encoder (which could be connected inside). Please reply to my email address. Thanks, Steve/N6OE

Check to see if the receiver is being overloaded, perhaps by a strong station
like the NOAA transmitter or a paging transmitter. Also your antenna height and
known obstacles are not helping, you probably need to be higher.

Source record: 54984

Hi
I have a brand new AVR board (# X43-1500-00) for the TS-940. This is the new updated redesign AVR unit. It give your power supply much improved reliability. & will help with overvoltage failure (common in the 940) that lead to expensive driver & final replacements. The unit was used for testing only. Cost $113.00 from east coast transistor.

$85.00 including shipping

Thanks john

It has a built in encoder that is set by the little pot that you can see
thru a hole in the back. Continuously variable. You need to be able to
monitor the transmitted tone to set it.

Dear Nitwit:

Since when do you suppose the constitution gives you ANY "right" to use someone else's private property?

Last time I looked you do not own eBay, and you do not own Usenet, etc. When you want to use something that belongs to others you have two choices - play by their rules or go play somewhere else.

Replace them all. You want all four to behave the same. There should
be a resistor on the emitter to help balance the load, but why tempt
fate? If the price is low enough it is even worth getting an extra
transistor or two as a spare.

Another shack cleaning special!

I have way too many 2M radios and so the Yeasu FT-270RH must go! The radio is about an 8.5 cosmetically. The radio has given flawless service. The LCD is clear. It has the DTMF mic and does ctcss tones. It comes with the radio, mic, power cord, and the mobile mount with quick release.

I would like $95 plus shipping for the radio. If you need a picture, I can take one and upload it to my webspace for your viewing.

2996. FS: Kenwood TS-430 and MC-60A $400

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-04 00:00:53 UTC
From: Grant Hopper <ghopper@eskimo.com>
Message-ID: <ghopper-FF0C2D.17005303092001@eskinews.eskimo.com>

I have a TS-430S for sale. The radio is clean, in good condition, works fine, and has the YK-88S filter. The radio has never been in a smoking enviroment (except for field day and the accompanying cigars... don't tell my wife). I'm selling it because I have a TS-440 and can't justify two radios.

Pictures:
http://www.eskimo.com/~ghopper/ts430f.jpg
http://www.eskimo.com/~ghopper/ts-430b.jpg

With the radio or after the radio itself is sold, I have a Kenwood MC-60A desk mic in fine condition.

I would like to get $400 for the radio and mic.

Hmm, I'm not that familiar with marine transmissions, but are the boats
typically operating simplex or going through some kind of repeater system? If
they're doing simplex, 25 watts of "high" power, coming from a little whip
antenna on the highest point of a boat, isn't going to carry very far, I'm
guessing. Putting your receiving antenna up on a tall mast may be your only
solution. You might look at what kind of antenna setups the marinas are using.

I have a seven range analog clamp-on AC ammeter for sale for $30 plus shipping. It in in great condition, having hardly been used since it was thought to have been lost, but merely put away in the attic...

It comes with the clamp on meter which will measure up to 300A, probes, inductive pickup (1x and 10x) and is still in the original box.

Decade (http://www.decade.ca/) makes several models. They have at least one model that has been type accepted by the FCC. Ramsey Electronics offers several kits *however* I don't believe any of those are type accepted and legal for use in the U.S.

In addition to the Decade units that operate in the FM broadcast band (designed to be used with a Walkman or other portable FM receiver), there are a number of hearing assistance units which operate in the 70 Mhz band or via IR and come with specialized receiver units.

3002. FS: pair of Motorolla Desk monitor "phones"

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-04 01:18:59 UTC
From: Grant Hopper <ghopper@eskimo.com>
Message-ID: <ghopper-DACD3C.18185903092001@eskinews.eskimo.com>
Source record: 54905
Cross-posted to:
rec.radio.swap,rec.ham-radio.swap,rec.radio.amateur.swap,alt.ham-radio.marketplace,rec.radio.amateur.equipment

I am going to try to save myself the headache of selling these on eBay where they will surely command a higher price than I expect (I am constantly suprised by what stuff sells for there.)

I have two Motorolla remote handset/monitors in fair to good condition. They show wear but are not damaged. That is why only fair to good. They are black bakelite and very heavy construction. There is a red transmit light on the side and volume and PL controls on the front.

Both units were working when removed from service several years ago.

I'll take the best offer including shipping and please indicate if you want both, or just one.

A picture of one unit (they are pretty much the same) is located at http://www.eskimo.com/~ghopper/mphone1.jpg The photo shows the unit in all it's dusty glory! It was manufactured in 1963 but still looks like the height of Motorolla technology. Actually the units are pretty cool and I was going to use them for a remote in my office for a 2m rig I keep in our wiring closet but I ended up buying a rig with a remote head that uses a 4 wire interface and decided I liked that option better.

I have a 2 meter amp for sale. It is new-in-box as I never got around to using it. It was made for Radio Shack and by all accounts was a good amp and did a superior job of rejecting intermod due to its good receive filter (that's why I bought it). It has all the mounting hardware, etc.

Specs are 1-5 watts in 30 watts out, has receive preamp.

Here's a picture: http://www.eskimo.com/~ghopper/2Mamp.jpg

I'd like $40.00 plus shipping but will consider offers.

Gee, I hate to throw cold water on everyone but I disagree with the concensus so far. If only one transistor dies from infant mortality, then NOTHING is to be gained by replacing the other three. However, if death was caused by something like a lightning strike, then yes, it may be worthwhile to replace all of them. Typically, I only replace single failed components and have not been disappointed so far.

Actually, as a regular reader/poster on several of the NGs this thread is
running on, I enjoy reading selected FA posts, if the item sounds
interesting and IF it is properly listed as FA. Reading these has resulted
in several spur of the moment ebay purchases. I brouse ebay on an irregular
basis, and might have missed some of the items had they not been mentioned
on the NGs. I will not buy any item when the subject line says For Sale or
FS, and it turns out to be on ebay.

>
> just me two cents folks ;)

Yeah, I just can't understand what gets these people so worked up about them. I pick and choose which items I read in the NGs, if the subject line doesn't interest me, I don't read it. It's as simple as that. I only use the filters on the commercial sellers that continually post FS items. I wonder if these same people complain about going into a library and finding books on the shelf they don't want to read.

Just my two bits' worth (inflation)

> the noise just isn't there?

It may be coming from the PC bus, which continuously has data running back and forth. So, the noise frequencies will be dependent on what the PC is doing in any given moment (i.e. what programs are running). All those data pulses are rich in harmonics. Put plenty of ferrite chokes on cables coming out of the PC (video, keyboard, mouse, etc.).

Thanks all.
I raised the antenna yesterday and seem to be getting more transmissions.
The boats are transmiting simplex and not sure about the marinas, etc. I am
recieving all the near boats transmitting on "high" power, 25 watts. But
none of the boats transmitting on low, 1 watt. All boat-mounted VHF radios
can transmit at either 25 watts or 1 watt.

Not sure how I would get the other "Low" signals unless I move to the beach.
Probably a yagi or similar.

-Jim

>reduce the RF gain, and or shut off the NB.
>Simple as that.
The NB was off.

That may be simple but it sure isn't convenient. Why do we have AGC in the first place ? To avoid riding the gain control. Plus when you suffer from "senior moments" like I do, it increases the liklihood that I will leave the RF gain control set low when I go to another band and I will be thinking the band or the rig is dead !

No - there is either a defect in this rig, or a design flaw.

Rick K2XT

ps - I visited your web site yesterday. I love that "knob" page !!

3017. FT/FS Whites Spectrum XLT for VHF repeater

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-04 13:56:15 UTC
From: Kim <none@none.com>
Message-ID: <j2n9pt01e8hjrpjlcqrt4u65i906mifgqv@4ax.com>
Source record: 54920

I would like to offer my metal detector in excellent shape for a vhf repeater that is virtually plug and play on the ham bands... Detector comes with all manuals, video, recharger and original box.

Extras include:
Whites Blue Max 800 10" coil with extra rod for quick change. (never used)
battery case for AA batteries
Calrad detector headphones
Coil covers for both coils (saves the coils from wear)

Repeater must be in great working condition with duplexors and not look like crap. Let me see what you have..

Please remove the .nospam from my email to reply.

Will sell outright for $675 + Shipping

Please remove the .nospam from my email to reply.

Certainly replacing all 4 with a matched set is more economical
of your time, but replacing the entire unit with a new one from stock
(with crowbar protection) would be the best solution considering
the cost of down time and the stress issue.

In fact you could simply remove the offending transistor and de-rate
the supply accordingly for temporary emergency use, or leave a
rebuilt
loaner unit until the check clears.

I checked the service manual this weekend. Here's the adjustment procedure:

Connect external power meter and dummy load.
Mode=CW
Freq.=14.2 MHz
Adjust VR7 on RF board for 100W
Tune to 29.7 MHz
Verify 95 +/- 5 W

I would buy into that except that its an all-or-nothing scenario.
If there is no noise, then there remains no noise until the next
time i reboot the PC. If there is noise, then there is a constant
noise until i reboot..... the next boot may or may not have the
noise. Its random.

In my most recent paper catalog from AES, many, not all, but many accessories are discounted (or at least I see "regular" and "sale" prices).

I'd imagine the biggest volume retailers would be most likely to discount accessories. So you might also try HRO.

(Back when I wrote brochures for Compaq, I had one VP tell me, "We discount our PCs and printers -- but we overcharge on the accessories. That's where the real money is.")

Perhaps I misunderstand, but I thot all States make Ham call plates
available - most for a fee, of course - but that if you want a FRONT
plate in a State where only a rear plate is supplied (PA for example)
you need a non-gummit supplier. We have one for each vehicle.

For Sale - Icom IC-756PRO in excellent condition - non-smoker. Recently

given full check-out by AES. Has been used sparingly only to work DX on

75 and 160 during the Winter 2000 DX season by drivng a big amplifier - so it has had an "easy life"! There are no extra internal options needed since this radio is factory "loaded" with digital 3rd IF, DSP and

filtering. If you haven't used DSP and digital filters powered by a 32-bit microprocessor, then you have been missing something!

Complete with Icom IC-756PRO Service Manual (book - not the CD ROM version), user manual, hand mic, power cord and original packaging.

Need to make room for new equipment - asking $1900.00 firm including UPS

Ground Insured shipping to your domestic US destination.

The tabletop (particularly behind my rig) gets very dusty. Left alone,
little spiders will make there homes there.
I always figured old T shirts with some endust was the best duster.
I found something better!
Pull-out dusting sheets called SWIFFER.
At the grocery store with cleaning junk.
They work GREAT! They actually do what they say they do. They pick up
the dust and do not just push it around. Totally dry, so no smears. Even AOK
for front panels. Does a good job on wrinkle paint rigs also.
I don't usually plug stuff like this, but if you give it a try, you will see
why I did.
Regards....Dave

Hello,

I have got a klystron type SAL89 from Sperry in our museum collection.
Could not found any characteristics of this valve sofar.

Is there anybody out there who could help. What is the power input and
output. Anode voltage & current. Heater voltage. Frequency of operation?
I will not put it into operation, hi. Just trying to foresee question from
the public next sunday with our museum 'open day'.

Thanks & 73

Andre / ON7UM

4 SALE LOTS AND LOTS OF COLLINS EQUIPMENT.....

1. COLLINS LATE MODEL "round emblem" 51S-1 RECEIVER
$1900.00.....NICE.....

2. COLLINS 75S-3C WINGED EMBLEM RECEIVER
COLLINS 32S-3 WINGED EMBLEM TRANSMITTER
COLLINS 516F-2 POWER SUPPLY.....$2500.00

3. COLLINS 75S-3B WINGED EMBLEM RECEIVER
COLLINS 32S-3 WINGED EMBLEM TRANSMITTER
COLLINS 516F-2 WINGED POWER SUPPLY.....$1700.00

4. COLLINS 30L-1 WINGED AMPLIFIER.....$600.00

5. COLLINS "BRAND NEW" 351D-2 KWM-2 MOBILE MOUNTING BRACKET,
CABLES INCLUDED ...NEVER USED!!!!!!!!.....$250.00

6. COLLINS PM-2 POWER SUPPLY $275.00

7. Collins KWM-1 transceiver, Collins matching 516F-1 AC power supply,
Collins 516E-1 12 volt supply, and Collins 351D-1 mounting bracket for
the KWM-1, Astastic hand microphone, Collins 189A-1 phone patch and
original manual $1875.00
checked out by Wayne Spring W6IRD

8. Collins 270G-2 external Speaker $300.00

9. Collins 270G-2 external Speaker $300.00

10. Collins 75A-3 in very nice condition, the outside case was
repainted with a slight darker krinkle black color professionally done
by a painter that does military equipment, included accessories as
follows:

Collins 8R-1 100 KHz crystal calibrator
Collins 148C-1 NBFM adaptor>Collins F-455-B-60 6.0 Kc A.M. filter
Collins F-455-B-31 3.1 Kc filter
Original Instruction Manual.....$1150.00

THANK YOU AND 73,

Oh dear, I was afraid you'd say that. I'm looking for a new front panel
for a Icom 745, btw, if somebody has one. I tried like the dickens to
minimize the effects of the Caribbean salt air with careful maintenance
and lots of tender rubbing but I'm afraid that the lettering finally
wore off...moreso from regular cleaning.
What I want to see is a product that PREVENTS cobwebs under my BA
chassis...not just something to sweep them away.

What I do to reduce "cleaning" wear is to use a small fine bristle
paint brush to dust off my rigs. Works great and makes no wear on the
lettering etc. If I have to actually clean a front, I use a small wad
of toilet paper tissue and either a small amount of plain water or
windex. Windex works great normally, but I would always want to test
it first on a new rig. So far I've never seen it hurt paint. If in
doubt , I would use plain water. The toilet paper if wet makes very
little wear. I never use a course towel like a kitchen paper towel.
Those can scratch in some cases. I had to clean the front of my 830
after field day this last year. Windex and a toilet paper made it look
like new on the front. P.S. I don't actually spray the windex on the
radios, I just spray a little dab on the toilet paper wad to get it
wet. I go back over it with my paint brush to clean the "paper lint"
off if needed. MK

Normally, I don't like "me too" posts, but MK is right on with this one
and deserves some support. I have done everything he says for years and
the results are excellent. The only minor difference is I use a "large"
bristle brush instead of a small one. :-)

If you get no real answer tell the public that it was used in early experiments that led to the 'transporters' seen on Star Trek. The power from the "valve" (IMHO a misnomer in this case) was fed to a dish antenna that focused all of it on an infitesimal point some miles away. An identical station at exactly twice that distance focused on the same point. The energy density at that point became very high, E=MC^2, and mass warps space. Thus space was warped bringing the two stations into direct physical contact along a line the diameter of and drawn thru the point.

Utter BS of course but .... :o)

We took the advice of customers and are now selling our PEANUT WHISTLE TWO 40 meter QRP CW transmitters with transmit crystal, if you are in need of one. We've got them in stock for the internationally recognized QRP hangout frequency of 7.040 MHz.

These transmitters are ASSEMBLED. NOT a kit! And they are a blast to operate! ONLY $19.95 plus shipping if you don't need a transmit crystal. ONLY $29.95 plus shipping WITH a 7.040 MHz transmit crystal. At these prices, they're far less expensive than many kits! Many in stock for immediate shipment.

For a photo and further details, please visit:

I am trying to locate a source for soldering iron tips for an Unger model 9900 temperature controlled station. The iron p/n is 9931AS and the tip p/n's range from 9960 to 9986. I also need the tip retainer (p/n 9932) for same iron. I realize that Unger was bought out by Weller. I have so far been unsucessful in all my searches on the web in locating these. Can anyone offer a suggestion on where to locate these.

Thanks,

The one I use is a 1.5 inch wide model with about 2 inch long
bristles. I use it for nothing but dusting radios to keep it clean.
It's not real small. I actually should have said to use soft bristles.
Thats more important. You wouldn't want to use stiff hard bristles as
they could scratch.

It's not a Ft 1000 MPKV or IC 756 PRO or even a TS 570DG. With that said, last night I worked France on 40, Norway, Russia and Hungary on 20 and a lot of stateside QSOs. I was running 5 watts and my dipole up 25ft.

It's a fun radio that will help you to improve your operating techniques. It's very portable and I take it when I travel. It is a decent swl radio and it's FM and AM broadcast passes muster. I would think it would be perfect if it had the weather channels. By the way, I use it as a back-up 2-meter rig.

And just because the bristles feel soft to you, doesn't mean they
are soft. Some synthetic fibers (polyester, nylon, etc) used in
brushes feels soft because it is so fine. However it is actually a
very hard material and the ends can be sharp and hard enough to
scratch plastic. I tend to prefer a horse hair brush, but pig
bristle (cheap "natural fiber" brushes from asian countries) are
usually OK as well.

Fleamarket Talk followed by..... ENGLISH translation...
1. This rig puts out a big signal... Its 50khz wide !
2. This is a really good CW rig... It doesn't work on SSB !
3. It seems to be a vintage regenerative type...It oscillates!
4. I just re-tubed it... Got 'em from a questionable USED tube stock!
5. I just aligned it... The slugs on the transformers are jammed!
6. I don't know if it works... It doesn't work and probably never has!
7. It doesn't CHIRP... Probably cause it doesn't transmit!
8. The audio sounds great... The 120hz buzz is faithfully reproduced!
9. It just was serviced... I sprayed WD-40 all over the wiring!
10. It comes with the original box... Just scoop the kitty litter out!
11. Better buy it cause it wont last... No translation needed!
12. Sure, it works at full power... It sucks all it can from the wall!
13. Frequency stability is great... VFO doesn't work, you'll have to use crystals!
14. This rig has wide band coverage..... It drifts up and down and out of band!
15. This rig was popular in its day.... They had many HF nets on repairing it!
16. QST gave this rig a great review.... The language broke new ground for profanity!
17. It might need abit of tweaking... Marconi himself couldn't fix it, yet align it!
18. It was used in government service... Stored outside on wooden pallets!
19. The dial drive may need lubricating... The gears are stripped and set screws locked!
20. I plugged the rig in to see if it lights up... The light came from the 2 ft flames!
21. I'm selling it cause I have 2 of them... I'm selling the parts radio!
22. It came from an estate sale... Any problems, take it up with the owner!
23. I'll help you carry it to your car... I'll do anything to get rid of this boat anchor!

3067. FT-847 Mic Problems

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-05 22:14:29 UTC
From: Dan and Alison <danandalison@bmi.net>
Message-ID: <3b96b7df@news>
Source record: 54874

Hello,

I have an FT-847 and am using the desk mic MD-100a8x at our school club station. I seem to recall some postings awhile back about the mic. I get terrible audio reports. I have sent the mic back and received a new one and I am still getting the same audio reports. The had mic works much better! I think it has to do with the settings but can't remember from the postings (about a year ago or so). Can someone remind me about the fix for this?

Thanks,

Dan

3071. Icom 275H Help

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-06 01:04:07 UTC
From: Amateur Radio Station W5CIA <w5cia@nospam.usa.net>
Message-ID: <TVzl7.2068$05.1403267@newsrump.sjc.telocity.net>
Source record: 54873
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.misc

I have an IC275h allmode 2 meter that has the following problem:
USB, LSB or CW the receiver goes dead and the S Meter moves to half range
In tx the meter movement pegs with no audio to the microphone and no power
output
With audio applied to the microphone the meter stays pegged but an external
watt meter shows normal output
Switch to FM and all is fine
Any ideas before I ship to Icom for repair.
Thanks

Hi All,
I have a older CDR rotor and two control boxes for sale.
Rotor works but probably needs to be rebuilt since its a older unit. Looks like a pretty heavy duty unit.
I would like to trade for a packet controller like the Kantronics kpc 3 or ??
If interested, you can reply to:
baycity@pacifier.com

Thanks
Gary

Steve;
I saw an IC275 radio for sale on e-bay with similar symptoms and was tempted to bid, so much so, I studied the schematic to try and troubleshoot it. There is a block (no schematic provided by ICOM) shown within the main unit called "DAS". I believe it contains the BFO circuitry for the SSB and CW modes. Trace back from pin 7 of IC4 and you will see what I mean. I suspect a bad crystal oscillator. IC4 could be bad as well. You will see a picture of this portion of the circuitry on page 6-5, look for adjustments L30, L31, C119 and test point R186.

I would think troubleshooting from the receive standpoint should yield success with the transmitter as well.

Please let me know how you make out with this, I would be real curious to hear what you find.

HI,
Dan & Allison, go to the link below. And look @ throttling back the audio. I suggest if already not installed. Try the optional Collins or Inrad filters for Audio Output. They are quite expensive. But I recommend them. A good suitable Mike also for the radio. I suggest the IC SM6. I had same type problems as yourself to begin with. It is very hard to try and match a suitable Mike to the 847. If you are looking for that wee bit more Base introduction. You can also check out the Menu options. I have -10 dB selected for USB LSB. Try adjusting these settings also. If you have not done so. Other options available is the new Graphic EQ available @ the address below. It has built in Noise gate filters and an excellent audio output. You can listen to sample files available on the site. Good luck and hope to hear you on air some time.

Source record: 54882

I have 2, now -- thank-you to the good-guy sellers.

Looking for the third, pls.

Remember, this ain't EBAY.

I may be crazy and stupid for wanting 3 of these boxes, with their limitations, but I ain't stupid and crazy enough to take any of the seriously-inflated offers that I received among the ones I did take. 2 offers were for amounts exceeding some credit-card limits :o(((

However, I truly appreciate all offers, and should you need a shipping box, I now have a choice of two to send you, if we shake hands and do business.

Thanks and 73,

Dave, K3BHJ

That would be a great idea! Either way you do it I suppose you would have to use the parts from a charger for it. I have been meaning to do something like this because when the radio is left in the charger the charger seems to create a bunch of noise that blocks out any VHF reception. If you do do anything with this project let me know.

Message-ID: <3B97BF2F.3169256E@att.net>
Source record: 54892

I have repaired the optical coupler in my FT757GX several months ago.
It's quite simple to repair or replace. In my case, the repair
consisted of gently reaming out the shaft bearing to eliminate the
shaft's binding. If you are looking to replace the coupler, Yaesu
charges $28 for the part. You can adjust the "loosness" of the shaft
with the adjustment screw on the bottom of the front panel.

Message-ID: <3b97fb50.24918926@news1.coam.net>
Source record: 54798

I've upgraded and am trying to liquidate some of the stuff I have left over.

The Alinco DR600 is an older dualband radio but works like a champion.

The mobile dualbander has been used in the car so it has a little bit of dust on it. All the mods have been done to this. It has three power settings. 2m has 5w, 25w, 50w. The 440 side has 5w, 20w, 35w.

I also have a Kenwood handheld TH-215 220 radio. It looks brand new, hardly ever used.

I have no idea what this stuff is going for so, lets give it a try on price.

Dualband $250 and HT $150. Payment will be prepay or COD with Cashiers Check or Money Order only.

Now if you don't agree with these prices, just keep it to yourself. The prices can always be negotiated.

Thanks, Juan

You might send an email to the International Amateur Radio Union, headquartered in Paris, at iaru@iaru.org

They can probably give you a few radio shop addresses.

I've worked with tubes most of my life, but never heard the term "spigot".
To what does it refer? Is this perhaps the index on the tube base?

Hello Tom,

Try : http://www.radioamateur.net and select "Sites Commerciaux"

In Paris downtown, you will find GES, RCS (Radio Communications
Syst�mes)

Around Paris, you will find : Radio DX Center, Sarcelles Diffusion, ERS

For each site, ou will find their address. With a good map of paris and
suburb, you will find them.

GES and RCS are in the same Paris district.

GES is the Yeasu official importer in France but is selling also other
brands (Icom, Kenwood, JRC...)

Hope this helps

73,
Philippe

David -- Make a list of 6 meter rigs (new, used and abused) from a
catalog and read the rig reviews at URL:
http://www.eham.net/reviews/products/38

Also check the ARRL reviews at URL:
http://www.arrl.org/members-only/prodrev/bymfg.html

I had a Kenwood TS-60 (no longer made) and liked it quite well. Later
sold it and a TS-450S to get a TS-570S(G) HF+6M -- like this combo as
well.

For a few hundred $ more than an HF rig , you can get an HF+6M rig all
in one box. See the various models in the big 4. Generally the
performance is closely related to price so any of the 6M rigs will
probably work for you. If you intend to get into big time 6M contesting
-- duty cycle and heat problems may influence your decision. My TS-60
did tend to heat up under sustained use (or abuse). I just put an
external blower behind the rig.

P.S. Next time don't spam every newsgroup -- this belongs in

hey jim
\the only way to get to hear the low power boats is to go much higher like
50-100 feet above the ground and add a mast mounted preamp a one watt transerver
will only carry line of sight which is only a couple of miles with no
obstickales and remember if you start getting a run of coax at those freqs over
100 feet your going to lose half your signal to coax loss so you may need to
change coax as you get higher
good luck

jim wrote:

Source record: 54818

Hello,

I am trying to program a Motorola R100 Repeater for amateur use. I have the necessary software, and have made the programming cable as shown in Batlabs website.

When I try to read the RX or TX info nothing happens, and I get a "Device not ready" error on the program. Could my cable be bad, or is there some jumper, switch etc. in the repeater that needs to be set to program.

I am using a Modern laptop booting into dos and running the software. I made the cable on a DB-9 connector instead of the DB-25 shown in the website. I switched Pins as appropriate etc.

Thanks for your help,

Stave

3118. Needed Transistors for Palomar Pulsor Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-07 21:48:23 UTC
From: Charlie McManus <cmcmanus@charter.net>
Message-ID: <tpig2lieqkld8e@corp.supernews.com>
Source record: 54821

Obviously this question is for anyone whom may have or have had a Palomar Pulsor Linear Amplifier.
I need the big round transistors on the back that are used for generating the high voltages. The ones that are on it are
bad and have the numbers rubbed off. Anyone know what the original part numbers were so I can cross reference them?

3119. Collins 75A-1, 32V-2 sale

Collins 32V-2 transmitter and 75A-1 matching receiver. Both are from an estate and are sold as-is. They both appear to be complete and manuals are there. They are very dirty but the front panels look like they would be a 9 or better if cleaned up. Both cabinets are original and will clean up nicely. No pictures yet, possibly later but must borrow a camera. $1150/both.

Mr. Miles,

I'm very sorry if I have offended you. I did not relies that cross posting
to more than one news group was considered spamming. OR IS IT?

I was simply trying a common sense approach to reach as many people as I
could with a one line question.Which by the way was answered by many,both by
postings and email.

Again thanks for your unkindly comments. I did ask for any and all.

>Can someone please tell me what the default power-on TNC-computer data
>configuration settings are for the 1270B? Direct via email would be
>helpful. Thanks...

A Dip switch on rear of TNC must be set for the speed (baud rate) in which you talk from the TNC to and from the Computer.

If you have a Red switch "on" is UP.
If you have a Black switch "on" DOWN.

Only one switch on (all rest off)
1 on = 300, 2 on = 1200, 3 on = 2400, 4 on = 4800, 5 on = 9600. (I suggest switch 5 on and the rest off for 9600 baud).

The terminal software must be set to 7 bits even parity and 1 or 2 stop bits.

Message-ID: <999940153.684238@ns1.gct21.net>
Source record: 54837

Yep, it's old news. The 756 Pro MK II will have a few firmware improvements, the major ones are the DSP filtering will have variable shape factoring as well as the current bandpass features, there will be a front panel "one touch" voice recorder feature (and possibly an on-air playback function), and the noise blanker level will be variable. Also, they have supposedly improved the IMD numbers. Also, the analog "S" meter will replace the yellow markings with white (big deal :>)

Nice additions, but not significant enough to make me want to upgrade from my Pro.

And in case you are wondering, current 756 Pro's cannot be upgraded according to Icom - but then again, why would they want to limit the sales of the MK II by offering upgrades ?

Here we have another spammer. It misleads
in the subject line by saying this item
is FS "OR" For Sale "OR" misleads and
indicates said item is for sale when it
is actually FA = For Auction. The FA is
used by those of us that do not Do Auctions.
We set our spam filters for FA in the subject
line and we do NOT have to see the auction
spam. Do not trust this person.

"If they Lie in the subject line"
They will have no problem misrepresenting
the JUNK they have at the Auction..

If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was.

Some of the Real Sleazy people will make
it look like a reply to another message.

Easiest way to avoid this message?
Do NOT LIE in the subject line..

Just My Opinion..

Bob

I have an extra Kenwood TS440/AT and a Kenwood 241A that I'd like to swap for an ICOM 706mkIIG.

If ya don't know, the 440 is an excellent 100w HF radio with built in tuner, 12vdc input, dual VFO. Mine is is great working order, comes with hand mike and a Heil headset mike. The 241A is a mobile 2m rig which also works fine but the display periodically goes nutz. Our current class B motorhome doesn't have enough room for both radios!

Would much prefer eyeball contact but let's talk if interested.

I have two of them and they work just fine. Is it bad all the time
or just with cross band repeat? One thing to watch for with cross
band repeat is having the 440 frequency aroud 3 times the 2
meter frequency. The third harmonic of your 2 meter signal could mess
up 440 receive.

Yeah, I guess they should never consider making incremental improvements.
Tends to give them a good reputation.

Personally, I'd like to see a "new" 775DSP with some of the pro's bells and/or
whistles. in the DSP department.

In article <3b9a6d87.245258961@news.ptdprolog.net>, wf3h@ptd.net was of the
opinion...

I was interested in Buying it NOT Bidding on it. It said
FS. = For Sale.. If it had CORRECTLY IDENTIFIED
ITSELF IN THE SUBJECT LINE, AS An "FA" I WOULD
NOT HAVE DOWNLOADED THE MESSAGE. You dumb F***.

Like it say's

If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was.

Now F.O.A.D.

Just my opinion..

Bob

I can't remember the details of the R100- but are you are it doesn't need a rib box between the computer and repeater? The rib box cables use a 25 pin connector also.

3162. FS: Johnson Ranger I

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-09 00:30:44 UTC
From: Ron Eisenbrey <ab5wg@mylinuxisp.com>
Message-ID: <3b9ab7d2$1@news3.mylinuxisp.com>
Source record: 54766

This rig was purchased years ago as a project radio for restoration. It is now more years and never had time to get too it. Condition overall is fair, needs some clean up and TLC. Cabinet has normal scratches, panel has multiple places where the paint is rubbed out. My intent was to refinish the panel and cabinet. It is all there, including the long bolts in the cabinet. A previous owner started a restoration as evidenced by capacitor replacements and a three conductor power cord. I have not tested this rig nor do I have the time or inclination. The modulator tubes in the rig are 6L6's, not original, but I do have a pair of good original 1614 modulator tubes that are included with the deal. Reproduction manual complete with fold out schematic is included also. Sold as a project radio as is.
I have a full set of .jpeg pictures available for any interested buyers. This will be a nice winter project for somebody. $160 plus shipping from Texas, prefer pickup, but can ship.

Thanks,

Ron, AB5WG

now THAT would be a difference. the 775 is a fine radio, and could use
a major upgrade, like 32 bit floating point DSP, TFT screen, etc.
those are significant improvements.

Judging by the past receiver numbers they would have to do a miraculous job to improve the receiver too. All the various web pages from owners all seem to love the receiver, and some go as far as to suggest that "hams don't care and, don't understand the receiver numbers" Well I aint no dumb CB operator and based on the facts I would not buy it. I can understand someone falling in love with their new toy that's fair. But to say something is the best when it clearly has design flaws, one is only deluding one self. Others are willing to pay to be R&D beta testers i am not.

Granted there is a large variety of new Ham Radio equipment out there. I know many of the Ham Stores have in store displays also where you can set and try out each rig. With the prices what they are today for a top of the line Signature radio one can't expect a person to own several and give a comparison. With that said I suppose this is a futile effort but what are the opinions on the Top line radios these days? Is the most expensive the best performance? Or the best bang for the Buck. Does one of the major manufactures actually have a nitch in the market and a hold on the quietest, best receiving radio? DSP does wonders I know but also it helps to have a super quiet and powerful receiver to start out with. ICOM, Kenwood, Yaesu or Ten Tec they are all in competition along with others. My question is ... is there a general consensus that someone has found the holy grail for reception and operation?

It's a 4 pin plug of course. When you get the plug, there are numbers
stamped on the plastic on the ends. You will see a notch between pins
1 and 4.You may already have this plug...Pin 1 is mike element hot,
pin 4 is mike element ground, pins 2 and 3 are the PTT lines. On mine
,pin 3 is the ground side of that PTT of that matters. I'm going by my
830, which is the same as the 530 and most all other 4 pin kenwoods.

> Seems we will leave the real RF engineering to Elecraft.

Elecraft gets the good receiver numbers at minimum cost by sticking to a "ham band only" design. As soon as you want general coverage you are in a different ball game.

You'll get almost as many opinions as there are receivers. Every design is full of trade-offs (IMD, sensitivity, filters, size, frequency coverage, cost, etc) and different mfgs make different decisions. You just about have to make the decision based upon your own specific requirements and preferences.

Detailed comparisons and testimonials are at http://www.elecraft.com

Many hams with a keen sense for performance were amazed to discover that the Elecraft K2 (less than $600 in kit) outperformed their high price rigs. Many have let go of their big dollar rigs and use the Elecraft K2 exclusively.

Hi Syntor (and SyntorX) Fans,
If you are interested in getting your Syntor or SyntorX drawer unit on
the air, take a look at our WEB site:

http://www.piexx.com/ (Then click on the Syntor or the SyntorX)

This upgrade lets you operate the transceiver from a virtual control
panel on your PC or from our RJ-45 connected control head. You won't
need those big cables / control heads anymore. Very neat!!

Thanks for looking,
-Chris

Yes that may be true. But at the end of the day as pointed out by Dr Rhode in QST, just simple things like using good pin diodes results in enormous improvement in the receiver performance. Yet most manufacturers are still to this day using cheap pin diodes. The FT1000MP MKv is an example of this, they bumped up the 3rd order IP to a new all time ham radio high, but at the same time they made worst the 2nd order IP. The IMD Dynamic range is the worst and this is a radio that uses the same front end as the old MP. So much for progress.

I am looking for a DFC-230 manual, I will reimburse copy and mail costs.

Also interested in hearing from other users.

Thanks

George

3179. VX-1 Receive mods wanted

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-09 12:50:47 UTC
From: k4gj <k4gj@infi.net>
Message-ID: <9nfofohp1@slb1.atl.mindspring.net>

I would like to be able to receive on the 6M and 72mhz Radio Control bands.
Although the VX-1 receives BC and up to 1 ghz, they skipped this area.
Please e-mail direct.
Thanks, Ed K4GJ

Ed,
Look at www.mods.dk there are a lot of mods onthe site but I am not sure if
there is a mod todo what you want. Lots of good info though.

Curious, Willy, is there *any* modern-day hf transceiver with a receiver section
you like (other than Elecraft's)?

Any rig with good all-around receiver numbers?

Bob

I'll be holding a one-day-only electronics/computer garage sale at my QTH on Saturday, Sep. 15th, 2001 (yep, next Saturday). General area is Kent, WA (southeast of Seattle). Among other things, I plan to sell a militarized HP 8640B signal generator (AN/USM-323), some pulse generators, and a whole slew of computer stuff (much of it non-PC).

My address is current in the Callbook. If you need directions, please drop me a note as postmaster (a/t) bluefeathertech.com (spelled out to confuse spambots).

Thanks to the group for putting up with a somewhat blatant ad. ;-)

From: Kevin <kberlen@ticz.com>
Message-ID: <9nhbef0v8f@enews2.newsguy.com>
Source record: 54701

The R-100 does NOT require the RIB for programming. You may need to run
the RSS on an older machine. If you have an old 286 or 386 machine around,
you might load the software on it and try again. Also, the rig works great
in the ham
band, but the software will not allow you to directly enter the ham band
freqs. There is
a code plug edit mode that will allow you to get the job done, but will
require you to experiment some. Make sure you create an archive of the
"stock" codeplug image
before you start. Good Luck.

Yes there is actually ,the Rohde and Schwart EK2000 series of radios. Go have a look at their web page and you will see how Icom used many of their ideas in the design of the PRO. Well as the saying goes "if you take from one its stealing, but if you you take from many its research" I am not anti Icom, the Yaesu MKV is another example of a Frankenstein radio with poor phase noise performance. Just listen to the hiss coming from poor IF design. In real terms the MKv has gone backwards in close signal performance. It really does not take much to design and improve the current range of topline radios, but so long as ham radio operators put up with the experimental type radios like the PRO we will get more crap. The Kachina was a radio with potential, likewise the Tentec Jupiter, but neither of these manufacturers seem to want to be the best. Geee i guest that must be so hard, or they must have incompetent designers. So when someone like ELecraft comes along and does something technically good they should congratulated, and people should take note. I must add that the Elecraft is not a base station radio so is awkward to use full time. I am hoping they will bring out a base station Kit something along the lines of the Yaesu FT1000D with a very good receiver. But who knows what they thinking and maybe they will just blow away like a one hit wonder.

The ARRL members website has an up-to-date technical comparison of most, if not all, current transceivers. Maybe not the best possible tests used, but it's better than anything else available.

There's a similar comparison at the Elecraft web site of the receiver sections
of various name-brand transceivers.

Interesting situation here...

As of the time I am posting this, N1RZB had received a total of eight responses to his inquiry, and not one of them had anything to do with answering his question! Instead of helping the guy, everyone gripes and whines about cross-posting!

Yeah, I know that there are both written and unwritten rules of "netiquette", and perhaps N1RZB shouldn't have posted his query to some of the groups that he did post to. But perhaps we need to take a closer look at this. What's happened to the hobby? What's happened to hams being helpful to each other? Instead of getting an answer to his question, all he gets is bitched at by a bunch of self-appointed "interenet cops". We keep hearing that ham radio is "dying out". It's no wonder! When someone can't get a straight answer to a valid ham radio question, or get ANY answer in this case, it ain't hard to see why people aren't sticking with the hobby. I've heard it said that the internet is killing ham radio. This is a perfect example!

I wish I *could* give this gentleman an answer, but I really have no personal experience with six meters. I'm sure I'll be flamed for cross-posting this message, and for being one of the people who isn't giving the guy any help. At least I'm WILLING to help... I'm just not ABLE to help.

I second your motion. One of the best six meter rigs would be the Icom 756 Pro, which includes 6m. There aren't too many dediated 6m rigs. Another option is to find a used Kenwood TS-60($500-600) or an Icom IC-575H ($600-700). As with everything in ham radio, you can spend a little or as much as you can afford!

yes they do, but look at the review of the TS2000 which has the worst transmitter 3rd order IMD of any radio, yet they conveniently choose not too mention that this radio is a lousy splatter box. They also refuse to change the way they measure transmitter 3rd order IMD, which makes the numbers look better than they really are. By the way the English Radcomm magazine also does excellent reviews. At least they mentioned the TS2000 IMD problem but even then it was only a mild mention.

So the best thing at the end of the day is to educate yourself to read these numbers. By golly you only need understand that more or less is better, then you can compare rigs like a expert. Instead of relying on the "i worked 1000000 countries and i owned all of em" type reviews. You will soon learn what a bunch of liars some people are.

If you look in QST there are modules that will allow you to use DTMF tones to activate anything that you want. If you were to use one of these circuits, you could let the tone trigger a relay or drive a transistor to activate an X-10 device. From there you can do whatever you can do with any X-10 control.

I have thought about doing this for a long time but haven't yet done it. I would be interested in hearing from anyone who has or hear your results, Chris.

I would also be willing to colaborate with you Chris, or with anyone else trying to implement radio control using less conventional designs.

Unlike you, Dean, I don't have any poignant predictions to make about the future of the hobby, but it is VERY clear what will happen to the newsgroups if people aren't discouraged from cross-posting to ten groups at once. THAT insight doesn't require any soul-searching at all.

What the original poster did was every bit as much a part of "the hobby" as tuning up a 2KW transmitter in the middle of the band without bothering to turn on his receiver first. Crossposting to 10 unrelated groups is an act that could only indicate careless naivete on the part of a newbie, or extreme discourtesy on the part of someone who should know better. A quick check of Mr. Moge's extensive posting history on Deja will reveal which of those two options is most likely to apply here.

Followups set to the appropriate group...

Agreed, I have had a TS-60, an FT-920, and currently a 756 Pro - which does an excellent job on 6 meters, especially when using the band scope to detect band openings and activity.

However, no matter what rig you end up with, there is no substitute for a good antenna system. Given the choice, I would rather have an average rig with a great antenna system rather than a great rig on a marginal antenna.

Quite often this is overlooked when one forms an opinion on which rig is good or bad. Even the little MFJ 9406 6 meter rig will perform very well when connected to a good high gain directional antenna at a reasonable height (and a mast mounted preamp is a great help also). On the other hand, the 756 Pro on a mediocre antenna will produce marginal results...

Yup. Very good advice. We run a barefoot 100w rig and very rarely
have a problem working anyone we can hear. We have ongoing arguments
with club members who sincerely believe they just gotta have an
afterburner - and we tell 'em our LDPA @ 70' is as good as 5kw!

Source record: 54724

My FT726R was in storage for several years, and now has
several problems from non use..

The set has to warm up for several hours before the
VFO will change frequency (the FM/clarifier works fine in
FM. The data from the VFO looks fine on my scope. Any
ideas?

Also, the AGC is full on when in the SSB/CW modes, and
recovers after an hour or so of warm up.

I suspect bad electrolytics, and I am hoping someone else
who has solved these problems might be able to help..

From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <x0dn7.12809$5r.976378@newsread2.prod.itd.earthlink.net>
Source record: 54725

Certainly can't argue with that. But, the question dealt with the receiver section only. And, I know that the receiver section tests are not optimal for the parameters that REALLY matter. However, comparing the receiver numbers on the ARRL chart pretty much tells the story. I've never quite understood the hubbub about the TS-2000. It clearly was never meant to be a "competition" grade HF transceiver and one must wonder if it was meant even to be "state-of-the-art" with those IMD numbers.

I also agree that the greatest rig of all is the one you just paid $3,000 for, facts not withstanding! And how can anyone take the Elecraft seriously when the front panel looks like an early Boy Scout kit? I mean, how much would it have cost to put some sort of edge on that plastic dial cover?

VFO problems looks like it may be one of MC14069 hex
inverters that shape the waveform... One of the levels
is marginal, and the unit goes to work when the chip is heated.
The TEK465 10x probe is often enough load to kill it...

One problem down..

I have a complete Motorola Syntor X High power, lowband unit. This package as the 100 (110 ?) watt drawer unit with the 16 chan. pushbutton control head and mounting bracket, brand new speaker and bracket, mic and hanger with the PL decode control, complete cable, drawer unit with the mounting tray, and copy of the very complete manual.

This is one of the units that will cover both the 10 meter band and the 6 meter band.

The whole thing is in great condition.

I would like $195 plus shipping. Questions? email ghopper@eskimo.com

Buy or build a keyer from http://www.idiompress.com/
They emulate accu keyer as well, but have many more features and use
state-of-the-art components (EEPROM to store messages even when your keyer
battery goes flat). I bought the kit, assembled it myself and am enjoying it
a lot.

The older we get, the more likely we can afford a deluxe transceiver...
as a statement of our life accomplishments. But hams like to save
money - its part of the core spirit of our hobby. Wind that coil
on an oatmeal box and SAVE, SAVE, SAVE!!!

The longer Elecraft is around, the more ironic their success story
becomes. A little "kit" is blowing away the big guys? Hey, let me tune
that little puppy and see for my self. Hey, listen to THIS! Well I'll
be darned - its TRUE! These guys are hitting the sweet spot of the
ham market - highest performance and LOWEST PRICE! And you can smell
the sweet aroma of solder and actually put it together yourself. Did you
think you'd ever build a whole transceiver that worked better than
$3500 rigs in about 40 hours? You get giddy when you make the first
contact with it. Its AWESOME!! You feel like you did when you made your
very first contact.

Many of us saw Heathkit slide down the chute because their
performance/price got intolerable. The savings weren't there anymore and
there was virtually no performance advantage. Who would have guessed
that a little outfit could pull it off today? With all the fancy DSP/
CAD/CAM/Verilog/custom chips/surface mount/advanced technology?

They did it!

How well it looks is subjective. How well it works is where the rubber
meets the road and although its quantifiable, our "technical hobby" uses
terms and measurement parameters that are difficult to comprehend,
compare, and use to make intelligent purchases. Most of us don't
have the instruments to verify performance. Is that a good radio or
is the band dead? Whoops, my antenna is on the ground....:-)

And for the savings, you could modify that edge of plastic and have
THOUSANDS of dollars left over. Sounds like a pretty easy thing to

do - put my extra dollars saved in MY bank account.

Someday it will just be an A/D converter filling memory and then all software. Till then, Elecraft is leading the performance/price ratio by a giant margin. The thousands we save can buy a lot of front panel mods, an E-Z task @ a great savings.

73,

Steve Gale <sgale11@home.com> wrote:
> lookin for the 11m mod for this radio,,,,, thanks for any help in advance

Why?

Without going into the legal, ethical or moral issues:

The TS-830s was designed for a time when hams got involved with their equipment. To use the 830, you had to tune using the digital display, then tune using the little marks on the knob. One you got there, you then had to tune the transmitter output circuit (final) or you would damage the transmitter.

It does not receive or transmit in FM or AM.

If you were to attempt to "mod" it, you would most likely destroy a fine old rig, one which many a ham (myself included) would like to have. If by some miracle of technology you were able to get it to work, receive signals and not explode when you keyed the mike, you would have invested a lot of time and money in a lousy 11 meter rig.

Not being in a postition to offer you any money for the rig, being at least 6000 miles away, I can't promise you anything, but I expect that you could sell the rig (especially if it still works) for more than the cost of an "export" CB.

Anyone know of a good way to add PLL tone transmission capability to an old Kenwood TH-21A HT? I'd like to keep it working rather than just obsolete it, it's such a neat little radio. It has a button to turn on a tone, but it required a separate module (I assume) that I'm sure is no longer manufactured.

I own a K2. It's undoubledly the best kit transceiver ever produced and it is the best performing QRP rig ever produced. It was fun to build and it is fun to operate a rig that you built yourself. In my opinion however it is not a $3000 fixed station radio for only $500! Yes, the receiver performance numbers compare favoribly with a $3000 radio BUT it is a ham band only design (which makes it easier to get those numbers). There are also many other things to consider in a transceiver than just the posted numbers. The K2 falls short of most of the $3000 radios in terms of mechanical construction, tuning steps, display resolution, IF filter passband ripple, overall stability, etc. I've compared the K2 receiver side by side with my 756PRO on weak SSB signals on a noisy band (75 meters) using A-B tests with the same antenna and the same speaker. The signals are more readable on the PRO. I believe we are comparing "apples" to "oranges" when we compare the K2 to the high-end rigs and that does not do justice to Elecraft nor to the other manufacturers.

Both recycling now, Junior and Samantha bursted the
unique sneakers over robust cryptographer. Gavin questions the
librarian throughout hers and loudly infects. We dump them, then we
furiously crawl Martin and Annie's hard protocol.
Don't try to float the Pascals frantically, annoy them
wrongly. Byron, have a root credit card. You won't
negotiate it. The odd engineer rarely spools Susan, it
reboots Albert instead. Just vending at a backdoor
with the window is too pathetic for Ophelia to pull it.
Why will you persevere the cold ugly MPEGs before Tommy does?
A lot of filthy flat backups partly pump as the erect
bugs prioritize. I am seemingly actual, so I compile you. I was
moaning to filter you some of my insecure basements.
Lionel washs once, kicks sadly, then types outside the
terminal over the eternity server. She may load weird
errors beside the usable haphazard database, whilst
Alexis believably busts them too. Pat, for machines
idiotic and huge, confronts with it, posting strangely. If you will
engulf Michael's office around servers, it will dully
produce the interrupt. Who Ron's upper telephone prepares,
Neil disrupts around tall, closed chameleons. A lot of
abysmal cables are bright and other chaotic algorithms are
lazy, but will Allan manage that? There, blackbirds
vexate throughout dumb printers, unless they're stupid. The
cores, clients, and fax machines are all secret and
violent. Tell Quincy it's untouched formating under a
data haven. It's very silly today, I'll twist wastefully or
Walt will disconnect the plotters. He'll be interfacing
within plastic Fred until his CDROM interfaces eventually.
Merl wants to exclude compleatly, unless Vance examines
RAMs under Joseph's cowboy. She'd rather contribute
cruelly than eliminate with Ed's opaque postmaster.
Almost no dry interface or interface, and she'll steadily
transport everybody. These days, Winifred never reloads until
Donovan relays the virtual tape nearly. As halfheartedly as
Alvin locates, you can preserve the JPEG much more
daily. Lots of PGPs will be virulent junk scanners. Try
insulating the beanpole's shiny IPaddr and Kenny will

create you! Some programmers place, smile, and proliferate. Jeff will partially tolerate in Kaye when the cosmetic screens start against the blank email. It might disappear incredibly if Will's computer isn't disgusting. Who doesn't Genevieve save subtly? My unclassified network won't generate before I collaborate it. We facilitate the veggie thought. They are pushing on the backup now, won't kill opinions later. Al's Java obscures in front of our firewall after we consume inside it.

Yes but Elecraft has been at for a barely a year. God give them a break. Most other manufacturers have been at it in excess of 30 years and not once have they produced a radio that comes close in specs.

You highlight a very important point, is that they have always been willing to give us "bells whistles" and less performance.

Mechanical construction, the lord have mercy! As if the PRO is built to Mil Spec for shock and vibration. This is a stupid argument. If you dropped you PRO from 10 feet it will breal like Elecraft. The Elecraft was never designed as ARMY radio nor was the PRO.

Yes the stability is excellent and you seem to infer that it drifts, does? I dont think you dont seem to have atomic standard in the PRO. This is just mindless nittpicking.

What more has to be considered than than performance. SO you a ham who purchased a PRO because it sang and dance, if it is techbically flawed you dont give a dam. You willing to live all the bugs of the receiver performance for bell and whistles? Thats great to see. I supposed you would be happy to buy a car with square wheels, a leaky gas tank and a engine that cuts out.. MMMMMMMMM I wonder about this!

Comparisons well lets get back to this, copying signals in the weak and the noise WOW. Ihave tried just about every DSP radio, inlcuding a Rhohde EK2000 and all DSP technologies are poor. There is no DSP in the world that will allow you to pull a weak signal out of the noise on HF or 160 metres with clarity. THE AGC action is so superb on the Elecraft that it allows you to copy very weak signals. Even the mighty 1000Mp suffers from poor AGC action and gain distribution. If you think the PRO is so marvelous, just assume it has an advantage, that is untill somone with a BIG signal comes on an wipes the receiver out, then what use is the DSP???? If you read the ICOM brochure they dont even guarentee the receiver performance, thats how good the PRO is.

Willy

Who cares about general coverage operation i dont, if i want a great shorwave receiver i will buy a AOR or Sony or other radio decent Synchronous detection thats sounds better than any ham radio.

It does the K2 great justice by comparing it to all the current top line radios. It does the K2 radios ego a hell of a lot. Because lets be frank its bloody good. You should have reversed your argument and said it does the TOP LINE radios no good comparing it with a K2.

By the way it takes $100 bucks with of parts to make the Elecraft .5 PPM stability. How many Dollars worth of parts will it take to fix the receiver flaw in the PRO. I would think a new PRO2 but even then what i have heard about the PRO2 is that receiver is just a below average receiver in the IMD Dynamic range and third order IP department.

Something to think about.

Well i must have an inability to read specs of receivers and transmitters. All the radio spec data must all be wrong. Then again maybe all the current ham manufacturers have only been in business for the last one year. The Icom PRO must be the best radio in the world, have the greatest receiver spec, the best DSP in the world. I wonder with all these stunning facts i must be totally wrong.

Each to their own.

Source record: 54670

No, you're putting words in my mouth. I never said that the PRO had the greatest receiver specs of any rig. What I said was that when receiving weak SSB signals on a noisy band the PRO makes copy a little easier than the K2 (presumably due to the good response of the DSP filters). That tells me that the "numbers" do not give the total picture. The K2 may outperform the PRO under some conditions but not under all conditions. When running PSK31 for example, you begin to see some difficulties with the K2. The passband ripple causes the output power to vary with input tone frequency. When operating with any of the narrow filters the Tx and Rx frequencies may differ by 20 Hz or so. This is not to say that there is anything wrong with the K2; it was never designed with PSK31 in mind.

What I disagree with is your broad statement that no amateur transceiver ever manufactured even comes close to the performance of the K2. I don't believe that even the "numbers" will bear that out. Elecraft has done a great job but I doubt that they ever intended the K2 to be the equivalent of a $3000 transceiver. If you don't want DSP, full receiver coverage or any of the other "bells and whistles" then by all means stick with the K2. That doesn't mean that everyone else does not want these features.

I also didn't say that the PRO was mil spec or that it would survive a 10-foot drop. What I said was that it is a more rugged construction with a better feel to the knobs (i.e. they don't wobble). Again, that's just a difference I would expect to see between a $500 rig and an almost $3000 rig. If you think that these things a "stupid" then by all means save your money and stick with the K2.

Again, I'm not slamming the K2. It's a great rig and at a good price for what it is designed to do. I just don't think that everyone should replace their PRO or Mk V with a K2.

By the way, DSP is here to stay. So is SSB and solid-state.

Do you know how many times this gets asked here each week?

It normally winds up with petty bickering between Icom and Yaesu users.

Do a search in Google Groups instead.

Dan,

Buy one of each and you will be happy and so will the users of both type of radios. Many of the users that have one of these low profile HF/VHF/UHF radios end of enjoying them so much; they end up buying another one for the house besides the car. This is why I said buy one of each and this way you can enjoy one in the home as well as when mobile. They are both very good rigs and it appears the major difference is what style you like: layout of the screen and controls. I have found that users of both radios have found pro and con with each one of them and like the previous response has mention, that this has been asked so many times that you can find lots of information just by searching or even going out to yahoo.groups and looking into their user groups sections. I myself have the Yaesu FT-100D and enjoy it very much. I see some things I like also about the Icom, but my choice was because of the way the unit would fit in my jeep and the match of the Atlas antenna: ease of use. A friend of my has the Icom and loves his very much and the way he has it mounted in his car, fits very well and he is using one of the popular screwdriver antennas that can be found on the internet or hamfest. Pick the one you feel the best about, from looks and the way the controls are layout, because you will be the one having to use it day in and out, not me or anyone else. The way I have my mounted in the jeep, might not be the way someone else would do it and they might also find a better way of mounting the Icom in my jeep than I did the Yaesu. Bottom Line: Go For It! If you can't decide by looks and feel of the controls, then close your eyes and just pick one out of a stack at a hamfest. You will most likely be very happy with either one. Each model has had different issues and just like cars, not every unit that get purchase will be perfect, some will have problems. Good Luck and don't wait to long about buying one......each day you wait is another day you will not get to have the enjoyment of using one of these great radios.

Anybody got a good source for RF chokes? I've looked since yesterday and
can't seem to find a good one (Hard to believe, it's true). The only thing
Radio Shack had was some split beads and two, two packs of tiny chokes that
don't cut the mustard.
I've got three computers on a Local Area Net in close proximity to my HF
rig (Icom IC-730). I'm running a random length antenna through an MFJ-949E
tuner. I only run one computer during QSO's and am trying to integrate
computer functions into shack operation (packet, spectrum, logging, etc). I
know that a random length on HF and computers don't mix very well. But, my
situation's difficult (no attic, no towers, can't run wires, etc:(
Thanks for any advice and direction you can give.

I have for sale an excellent condition TS870S
This is an excellent Rig. It works flawlessly. Included with the purchase is
the Hand Microphone. I also have the computer connections for psk31 and a
homebrew interface that I will throw in if someone wants it.
Asking $1500.00 Pictures are available on request. If you live in the
Salem, Oregon area you are welcome to visit the shack and operate the unit!
rhansmeier@home.com

Selling to upgrade to 1000MP MKV. Xyl won't let me keep all of the rigs....

I tend to use the old ferrite rods out of medium wave radios and wind
the cable round until minimum noise, then chop off the rest of the
ferrite, can sometimes be a critical as half a turn to find the minimum.

Big advantage is I don't need to remove plugs and can do it easily while
interference is present.

This is really one of those -- you need to figure it out for yourself -- kind of deals.

Look at the user feedback under "product reviews" on http://www.eham.net/

Look at the laboratory reviews in the members only section of http://www.arrl.org

Go to http://www.google.com and do a search on the subject matter in the "usenet discussion forum" where these two rigs have been endlessly compared.

And, of course, if you can get to a store that sells them, that would help, too.

Message-ID: <9nqu4m$1fls$1@madmax.keyway.net>
Source record: 54692

Actually there is a very simple mod that accomplishes this with the removal (or switched isolation) of one part without the need for any further parts or fabrication. However, the AM option is very difficult to come by and is very extensive. If one is contemplating this type of operation you should find one with the AM option already installed.

If one doesn't mind sacrificing AM audio quality by listening with a SSB only rig, the simplicity of reprogramming the programmable divider is extremely tempting. This is your hint!

It should be noted that transmitting outside of the privileges of your license is at your risk and care should be taken to pay attention and know what frequency you are listening to before transmitting.

Since it is my opinion that only bona-fide ham radio operators should be poking around in ham radios, I would ask you to supply your Callsign, return e-mail and $10 via paypal to:
https://www.paypal.com/xclick/business=bradshaw%40cybertime.net&item_name=TS830data&amount=10.00

After 5 days (so that the trick doesn't get out too soon) I will e-mail the complete description and instructions in plain text that will not even require you to have the schematic handy.

I might be a little late on this but I believe the FT-920 is an excellent 6 meter performer. Where I live it hold its own during some pretty severe VHF contest activity.

Comparing QST's Product Review Lab reports you'll see it outshines the 756 Pro in some front end signal handling capabilities - & the price is right!

Just my 2 cents worth

I am on a limited budget and looking for a 10-20 MHz Oscilliscope. I am not picky, as long as it works. I would be happy to hear from anyone who has such an item that they no longer have a need for and would be willing to sell for a reasonable price.

Thanks
Bill Johnson

3299. WANTED: your thoughts on Yaesu FT-100 vs. Icom 706

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-14 04:36:22 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0109132036.eb7ecca@posting.google.com>
Source record: 54603
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.dx

I have a Kenwood TS-430S, and I have intended for some time to later replace it with the smaller Yaesu FT-100 or Icom 706. Due to a combination of factors (the need for portability in an emergency and the fact that my future as an engineer and my social life are so dependent on ham radio), I have decided to make the upgrade as soon as I find a new job.

The main reason I am interested in these two models: They provide capability on all of HF, 6m, 2m, and 70cm for only around $900.

What was the reason you chose the Yaesu FT-100 over the Icom 706 (or vice versa)? I'd like to understand the differences between the two. Which one tastes great, and which one is less filling?

P.S. Email me if you know anyone looking for an antenna engineer.

Greetings!

I'm looking to pick up a good DXpedition rig. Ideally, I'd like to find a rig that is suitable to be used as a mobile HF rig in the car *AND* suitable to put in a rucksack and hiked to the top of a mountain. Fancy bells & whistles are nice but not a necessity. Willing to consider new and/or used (but probably prefer new). Ultimately, looking for the best price/performance mix. Would greatly appreciate suggestions both on make/model and also places to obtain.

Also: I'm interested in picking up a mobile 2M all-mode unit. Again, all suggestions appreciated.

THX!!

Kenwood TS50S, its a reliable rig. Has a good receiver and has agood transmitter. Its small and very well constructed. Unlike its newer brothers does not have all those Mickey Mouse connections internal ribbon cables etc. IF you really want to give this radio punch get a external RF speech processor. By the way you can also wind the power up to about 200 watts, although 150 watts seems reliable.

Another good choice is the Icom IC 735, great receiver and very reliable. It is one of the best radios Icom ever built. The Yaesu FT900 would also be a good choice.

This is really one of those -- you need to figure it out for yourself -- kind of deals.

Look at the user feedback under "product reviews" on http://www.eham.net/

Look at the laboratory reviews in the members only section of http://www.arrl.org

Go to http://www.google.com and do a search on the subject matter in the "usenet discussion forum" where these two rigs have been endlessly compared.

And, of course, if you can get to a store that sells them, that would help, too.

Hi Bill,

I am a TS-850SAT owner. For what it's worth, I use my CW keyer as my "tuning pulser". I set the speed to 60 WPM and the weighting to 50%, and then lock the "dit" lever on the paddle. I use my Kenwood SW-2000 Wattmeter with the PEP detector selected. Been doing it this way for years without any problems. I use this method when I adjust my Heathkit SA-2060A ATU and when I tune up my ancient Heathkit SB-200 amplifier. A nice thing about using CW for this is that the duty cycle never exceeds 50 percent, so the stress on the amp is greatly reduced as compared to just keying down and tuning with a carrier.

Where/who's a good cheap/quality 'source of repairs' for the Icom HT's?
This W32A seems to only have a broken internal connection to the antenna (nothing which's easily accessable to this person, tho)... It works perfectly when another radio's within a couple inches of it.. ;) And everything seems to function like I assume it's supposed to..
Since re-finding it in my box-o-junk, I've been using it as a battery-charger for my other radios, but who knows... Everyone needs more working radios than they can use, I guess...
Thanks!

Considering that it's several yrs old and a 4'th or 5'th radio (in terms of use) for me, well, considering that I personally wouldn't pay more than $110 for a used one in perfect condition, I guess I'll continue to use it as a battery-charger if that is anywhere near the cheapest rates I can get for an acceptable (as long as it works?) repair...
And that's exactly why I asked..
Thanks.

>Whats a warc band? I am just getting started.
>

These bands, 30, 17 and 12 meters, were opened up to hams in, I believe, the late 70s. Older rigs don't have the WARC bands, but since the late 70s/early 80s, most all-band rigs include them. If you happen to buy a used rig made more than 25 years ago, it may have only 160, 80, 40, 20, 15 and 10 meters. It might also have 11 meters, which used to be a ham band.

WARC, I believe, is an acromym for World Amateur Radio Conference, where the bands were agreed to.

I've done substantial research here, Jason -- consulted several web sites, read some elegant technical articles. And I challange you to tell me that these two radios are NOT made by two different companies. In my experience that's a difference.

The WARC bands were allocated to ham radio by the World Administrative
Radio Conference of 1979, and were finally opened up over a few years
during the early 80's. The next conference is coming up in 2003, I
understand. Now they just call it WRC, World Radio Conference.

My understanding is that the first digit signifies the year plus 1 and the rest of the number is the serial number. Example: 90771000 would signify a rig manufactured in 1998. If this is not correct, I'm sure there will be someone to point out the discrepancies.

Cheers,
Rick

Hi,
I am looking to buy a later Racal RA-117 receiver. It needs to be unmodified
and in
excellent condition, both electrically and cosmetically. I am looking for a
rack mounting version without the desktop cabinet. I am (needless to say)
quite happy to pay freight costs to New Zealand and indeed could arrange
shipping from here.
I wonder whats is out there.
Thanks
Ted

I have for sale an absolutely mint Kenwood TS-850SAT. I am the original non smoking owner. I have both shipping boxes, hand mic, owners manuals and unopened accessory bag. The radio is a 10 out of a 10 functionally and cosmetically. The radio includes the SO-2 TCXO unit which is a $180.00 option. This is one of the last 850's manufactured. The serial number is 80200024. This is most likely one of the finest 850's you will find. I am asking $1,000 plus shipping from 48026.

Source record: 54644

In 1978-1979 The World Administrative Radio Conference, (WARC-79) grants Amateurs three new bands at 10, 18, and 24 MHz, to be phased in over the next 10 years. 30 meter power to be limited to 200 Watts.

No info on opening of each band except the last one 1989 -- The last of the WARC bands 17M becomes available in January.

For band plans, modes, etc see the Fine Biz Charts at Icom:

Ameritron AL-811 & Spare Set of Tubes
This unit is just over a year old and in clean and perfect condition, no scratches dings or rubs. This unit has never failed or been serviced. It has been a non-smoking environment and ran conservatively (its rated at 600 watts and I ran it at 500). It has 10 meters enabled (just a wire cut on this model). It is wired for 110v and can easily be changed to 220v if that is your preference. The tubes are in perfect shape/full output. The price includes a spare set of new 811's. The original box and manual are included. If you like mint gear you will not be disappointed. Price $500 Oh, reason for selling: New Alpha finally arrived : -)

3349. Best Multiband Radio for Emergency Communications.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-15 20:37:46 UTC
From: Ed <edhall_consultant@yahoo.com>
Message-ID: <9o0eu3rmk1@bob.news.rcn.net>
Source record: 54503

Hello,

With the recent stuff going on, I need to up[grade equipment. I have not followed recent improvements in radios for a while.

I am looking for the best Radio that meets the following conditions.

Portable, Can use 12 Volt power.
Multiband 2mm, 440, Low Band.
Widest receive capability possible on all bands, (needing to be moded is ok)
Good power out put, 25 Watts ? maybe 50
Multimode

Having a 400/2mm repeater function would be nice but not necessary.

This would be used for emergency communications, and most times I would have a generator, but being able to go portable at lower power settings would be great.

Price is not necessarily a concern.

Sorry if this has already been covered but I looked and did not see it.

Yes, the IC-706MkII/G is a good choice, as is the Yaesu FT-847.

To any body reading this,

I just becme the owner of a Kenwood SW-200 SWR/Power meter but it
didn't come with a users guide. It looks pretty simple to operate but
I woud still like to get a copy the U.G. anyway.

Please email me if you could provide a copy.

May email address is as follows: kb2ehj@intrex.net

I've never heard of those brands, 'yeasu' and 'kenwod'. It
might be hard to find a dealer.

Might I suggest you look at "Yaesu" and "Kenwood" instead?

For emergency use, I'd get three radios.

A 144/440 handheld transceiver. With its built-in antenna and battery, it may be your best emergency-situation radio. (Unless the repeaters are down.)

A general scanner receiver handheld from Bearcat or somebody like that; with built-in batteries and antenna. Great for listening to the utilities during an emergency.

And an Icom 706 or Yaesu FT-100 and a big 12-volt battery you keep trickle-charged all the time. This would give you good all-around communications on any hf and several vhf bands.

Forget the 847 -- hf performance isn't too good. Forget the 817. Five watts ain't enough in emergencies -- especially if propagation conditions are bad.

The best is a dedicated radio with the same frequency lineup as
the team you will be working with. Also separate radios will be
more utilitarian.

Real handy for city use, but pretty limited out in the sticks unless
for local "intercom" use. I use an old ft-470 dual band as a HT. It
also doubles as a good scanner. In the city for emergency stuff, I
wouldn't be without my ft-470 on my belt. IE: if a hurricane was in
town. Which happens here from time to time..I can yak on the ham
bands, and listen to the cops,fire etc also.
>
> A general scanner receiver handheld from Bearcat or somebody like that; with

I have a rat shack plug in the wall unit for this...My HT is the
"carry" scanner.
>

Yep again...I use my 706g with a car battery and 12 amp automatic
charger. Also use deep cycles out in the boonies. No generator needed,
unless you want an A/C..:) I charge my batteries off the car.
Everything uses anderson power connectors. This one radio "does it
all", and is all I would need, but I always take the HT along also. I
also have a 50w 2m ft-2500m in my truck as a backup.

>
> Forget the 847 -- hf performance isn't too good. Forget the 817. Five watts
> ain't enough in emergencies -- especially if propagation conditions are bad.

Dunno, I don't think the 847 is too bad on HF. Maybe not the best, but livable. It's ok with good filters. But like you, I would pass on the 817 as it's too low power. You need a 100w on HF for a reliable emergency rig. My vote is for the IC-706mk2g, or the FT-100 or FT-100D. Both do it all in one box, both are very small and easy to pack. I have a pistol case to carry mine in which also has room for my mike, keyer, etc. And both are reasonable priced for what you get. 900$ plus or minus. Both have wide receiver ranges for general coverage and scanner use. It's just user preference to which is better. I had good luck with a previous icom, so I went the 706g route. So far after about 8?? months, it's been flawless so far, and I've been running it hard just to weed out problems before the warranty runs out. It's on nearly 24 a day. So far, no problems, knock on wood... MK

For sale my Phoenix SX 440mHz 2 channel rig. I started the 9k6 baud conversion over a year ago and never got to finish it.Since packet is dying out here in W.N.Y. I might as well put it up for sale.This rig can be programed for any 2 freqs,either simplex or repeater.I wired a mic to the outputs on the back of the rig and it works,so this unit will not be DOA,just the finishing touches for 9k6 baud packet,or un-converted for repeater use.$125.00 plus shipping in U.S.A. dollars from 14120 zip.

3371. Will the new IC-756PROII have the typical Icom Bugs ?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-16 16:27:05 UTC
From: WR2M <wr2m@optonline.net>
Message-ID: <3BA4D2D8.F7026D13@optonline.net>
Source record: 54525
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Will the new IC-756PROII
have the typical Icom Bugs ?

I have purchased many new Icom radios in my 15 years of being a ham. I purchased all these radios in good faith only to find out there was always at least one major flaw (if not more) in the radio. Typically this flaw was usually something you would take for granted that the radio would do. This is very frustrating considering Amateur equipment is not easily refundable (at least not without 15% restocking fee) unlike consumer electronics which usually offer a no questions asked return policy.

In the late 80's I purchased a brand new Icom IC-761 over a Kenwood TS-940. When I got it home I realized it would not memorize split freq (as required in repeater operation) into a memory channel. I had just upgraded from an old Kenwood ts-440, what I considered a much lower quality radio. I thought I was upgrading, but with this one flaw I felt it was a step down when operating FM Repeaters. In fairness on HF there was no comparison, the 761 was far superior.

A couple of years later I purchased a new IC-735 I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, although there was no accommodation for Pl tone from the factory.

In or around 1995, I then purchased a new IC-736. I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, and even happier to see that pl was added. Only to find out that the Pl tones were not frequency agile (from outside the radio with out breaking out the soldering iron) as one would have hoped, I was forced to wire in an outboard Communication Specialist pl deck TE-64 to operate repeaters with different pl tones.

In 1998, I then purchased new a IC-756 , when I got it home I was glad to see that its pl tones were now frequency agile through the "set mode", this helped in operating repeaters. Now only to discover that the firmware was again inhibited from storing a split freqs and pl into a memory. (in my opinion this was going back two generations) With a call to tech support, talking to Gary, I realized at that Icom was not even aware that the radio would not store a split. The radio does have "quick split" function which was also on my 736, but this had always seemed like an after thought to me. The quick split feature does not work well if you live in an area where repeaters utilize 2 different repeater splits in the band plan. For example, my local 6m repeater has a one meg split, yet others within a 100 mile radius have a 500kc

split. A few other observations I made on the radio. Icom now had eliminated the separate controls for the squelch and RF gain. These separate controls have been around since the days of the 745, 751, 751A, 761, 735, 736. There were many times I kept the RF gain up to eliminate the background noise, and closed the squelch to monitor a frequency on ssb, and now the elimination of the adjustable Noise Blanker width . Am I the only one who misses these features, what's next ?

In 2001, I then purchased a new Icom 756 Pro hoping that all the bugs in the firmware would have been cleaned up by now. When I got the radio home I observed that the FM operation was no different than my original Icom 756. I then contacted Icom customer service, again talking to Gary he informed me that Icom never did fix that "flaw" All the Kenwoods both new and old (570, 450 and 690), and all much lower price tag do it, and do it well on FM. Why cant the higher end competition grade Icom's memorize separate transmit and receive frequencies in memory with a pl ?

I now own a 706MarkIIG and an Icom 746 (purchased used) . On these two radios the firmware works perfectly in the FM repeater mode. Yes, I can even operate with split Pl on TX and RX !! I know that the 746 was released before the "PRO" and one would think that the firmware upgrades would have been available on the PRO ! Yes it would have been nice if the radios again had separate squelch and rf-gain controls, and adjustable noise blankers. Who wants to open up a radio just to adjust a noise blanker, especially on the 706 when operating mobile. Unfortunately 706 and 746 squelch circuits appear not to have any hystersis in their squelch circuit to track a weak signal. This is very annoying when you are operating on the fringe of the repeater mobile , or just working a weak signal. The squelch constantly keeps popping.

Icom radios work very well on the HF bands. If they didn't, I would not have purchased so many of them. Also I am sure these "flaws" might only be noticeable to a hand full of us that work FM on the higher frequencies. But if Icom as a manufacture puts FM in the radio, why not at least do it the right way ?

I now see advertisements in QST for the now upgraded version of the PRO. My question is, will the "upgraded PRO" have the same bugs in Firmware that inhibited repeater operation that the past two generations of the 756 ? Will Icom re introduce separate rf-gain and squelch controls ? Perhaps add an adjustable noise blanker ??? One thing you can be sure of , most likely Icom will increase the price !!

Bill, WR2M

I have a couple of PRM8060s (Simoco) that I would like to convert to two metres. If anyone can assist with the information then I'll give you one of these radios FREE, gratis and for nothing and I will pay the postage.

I will replace the transistors at the finals. I also need to check a
diode connection at this board.
SO, I need a PCB diagram of this card.
Any help, link, etc. will be greatly appreciated.

It might be worthwhile to ask ICOM all those questions before purchasing.

"WR2M" <wr2m@optonline.net> wrote in message
news:3BA4D2D8.F7026D13@optonline.net...
Will the new IC-756PROII have
the typical Icom Bugs ?
I have purchased many new Icom radios in my 15 years of being a ham. I purchased all these radios in good faith only to find out there was always at least one major flaw (if not more) in the radio. Typically this flaw was usually something you would take for granted that the radio would do. This is very frustrating considering Amateur equipment is not easily refundable (at least not without 15% restocking fee) unlike consumer electronics which usually offer a no questions asked return policy.
In the late 80's I purchased a brand new Icom IC-761 over a Kenwood TS-940. When I got it home I realized it would not memorize split freq (as required in repeater operation) into a memory channel. I had just upgraded from an old Kenwood ts-440, what I considered a much lower quality radio. I thought I was upgrading, but with this one flaw I felt it was a step down when operating FM Repeaters. In fairness on HF there was no comparison, the 761 was far superior.
A couple of years later I purchased a new IC-735 I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, although there was no accommodation for Pl tone from the factory.
In or around 1995, I then purchased a new IC-736. I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, and even happier to see that pl was added. Only to find out that the Pl tones were not frequency agile (from outside the radio with out breaking out the soldering iron) as one would have hoped, I was forced to wire in an outboard Communication Specialist pl deck TE-64 to operate repeaters with different pl tones.
In 1998, I then purchased new a IC-756 , when I got it home I was glad to see that its pl tones were now frequency agile through the "set mode", this helped in operating repeaters. Now only to discover that the firmware was again inhibited from storing a split freqs and pl into a memory. (in my opinion this was going back two generations) With a call to tech support, talking to Gary, I realized at that Icom was not even aware that the radio would not store a split. The radio does have "quick split" function which was also on my 736, but this had always seemed like an after thought to me. The quick split feature does not work well if you live in an area where repeaters utilize 2 different repeater splits in the band plan. For example, my local 6m repeater has a one meg split, yet others within a 100 mile radius have a 500kc split. A few other observations I made on the radio. Icom now had eliminated the separate controls for the squelch and RF

gain. These separate controls have been around since the days of the 745, 751, 751A, 761, 735, 736. There were many times I kept the RF gain up to eliminate the background noise, and closed the squelch to monitor a frequency on ssb, and now the elimination of the adjustable Noise Blanker width . Am I the only one who misses these features, what's next ?
In 2001, I then purchased a new Icom 756 Pro hoping that all the bugs in the firmware would have been cleaned up by now. When I got the radio home I observed that the FM operation was no different than my original Icom 756. I then contacted Icom customer service, again talking to Gary he informed me that Icom never did fix that "flaw" All the Kenwoods both new and old (570, 450 and 690), and all much lower price tag do it, and do it well on FM. Why cant the higher end competition grade Icom's memorize separate transmit and receive frequencies in memory with a pl ?
I now own a 706MarkIIG and an Icom 746 (purchased used) . On these two radios the firmware works perfectly in the FM repeater mode. Yes, I can even operate with split Pl on TX and RX !! I know that the 746 was released before the "PRO" and one would think that the firmware upgrades would have been available on the PRO ! Yes it would have been nice if the radios again had separate squelch and rf-gain controls, and adjustable noise blankers. Who wants to open up a radio just to adjust a noise blanker, especially on the 706 when operating mobile. Unfortunately 706 and 746 squelch circuits appear not to have any hystersis in their squelch circuit to track a weak signal. This is very annoying when you are operating on the fringe of the repeater mobile , or just working a weak signal. The squelch constantly keeps popping.
Icom radios work very well on the HF bands. If they didn't, I would not have purchased so many of them. Also I am sure these "flaws" might only be noticeable to a hand full of us that work FM on the higher frequencies. But if Icom as a manufacture puts FM in the radio, why not at least do it the right way ?
I now see advertisements in QST for the now upgraded version of the PRO. My question is, will the "upgraded PRO" have the same bugs in Firmware that inhibited repeater operation that the past two generations of the 756 ? Will Icom re introduce separate rf-gain and squelch controls ? Perhaps add an adjustable noise blanker ??? One thing you can be sure of , most likely Icom will increase the price !!

Hans,

1. Make sure that the radio's speech processor is off.
2. Make sure that you use a 100:1 voltage divider in the line
from the sound card output to the radio's audio input. The five volts
out from the sound card is way too much for the radio, which is
expecting around 50 millivolts. The adjustment in Windows is far too
coarse to adjust to this level. It goes from too much to zero in one
jump.

The mount you are talking about I believe is from IXX out Illinois. I have one that I am willing to sell. I used it when I had a pick up truck and operated an Icom IC-735 mobile. I also had a large 2 meter rig on this mount. It did not even wobble-very solid. Will easily hold 20 pounds of radio gear or more. Very adjustable to about every possible angle, and you can take the whole stack out with one bolt to free up space, or take it in your house. Over $100.00 new. I will sell for $65.00 plus shipping. Solid steel, heavy duty construction. Like in a cop car.

From your lengthy post, your sum total complaints in regard to Icom rigs boil down to: fm repeater operation on hf'; the inclusion of squelch and rf gain on the same knob; the ability to adjust the noise blanker.

These are hardly "bugs." Design shortcoming, perhaps, but not bugs. And if these are your only complaints about Icom rigs -- I'm just a little puzzled by the whole post.

Perhaps a better heading for your post would have been, "What's a good hf rig for fm repeaters?"

Or, why not just show up at your nearest ham store, and try out the various rigs on FM repeater operation?

Cheers...

Bob

Every rig I've ever purchased had design shortcomings or oversights of some type when it comes to specialized modes such as FM repeaters or digital modes. I don't consider them "bugs" as they do work they as they were designed to work. It's just that mfgs don't always have engineers on board who are really into some of these more specialized applications an so things get overlooked. One annoying feature of the PRO for example, is that it does not permit the selection of the data modes via computer control (only USB or LSB but not USB-D or LSB-D). Add to that the fact that filter settings are a part of the mode command and you can't use software such as MixW to change filter settings for you without kicking the PRO out of the data mode.

Go into the rig microphone menu and set microphone control to "ON"

After this is done, the following keys will provide the following
functions:

"8" - VHF/UHF Band Toggle
"PF" - Select Transmit band Toggle
"B" CTRL on/off toggle
"D" then "C" - Toggles X-Band function on/off

So, to quickly put the rig into X-Band mode:

1) Press "8" and "PF" as needed to set your two receive and transmit
frequencies(for example 145.520 and 438.000).

2) Use the rig controls to set any PL tones and modes as needed. Then use
"PF" button to set PTT mode on the TMV7A to the band you want to transmit
from your remote on (438.000).

3) Then press "B" to toggle on "CTRL" on the other band (145.520).

4) Finally, press "D" and then "C" and X-Band will toggle active. Press "D"
and "C" again and X-Band will toggle off.

It seems like a lot to do when reading this, but when actually doing it, it
only takes a couple of seconds to go in and out of X-Band repeat mode -
without having to turn the rig off/on !

73 de W6DKN

P.S.

This info is not found on Kenwoods site or in any of their manuals or
service bulletins. I had to figure it out myself by trial and error. So you
might want to print this message out and put it in with your TMV7A user
manual.

Lets hope they can get it right. Its a great concept rig. I would be the first to buy the sucker if Icom Guaranteed the receiver specifications. These days you cant survive selling a radio with bells and whistles and expect it to survive. Icom low ratings in the contest and dx markets is a sure indication of this. My feeling is that PRO2 is just providing R&D dollars and a beta environment testing for the killer 785 that is due out later in the year. I think in this model icom will try and make it a serious radio. Now they defining the architecture, seeing what users say and so forth.

So unless that receiver at least meets the spec of the FT1000 series of radios i will not be buying it. What most people dont realise even radios like the old Kenwood TS870s has a better receiver and a solid receiver platform. For some reason designing a good receiver has deluded Icom for years. The IC765 and IC781 was their last great radios, everything after that was a disaster.

Anyway there will be many that buy, i will see what the reviews are like. If they show promise i will buy one because i am a student of receiver design. If its miserable i will sell and wait for the IC785. But boy on wonders about Icoms ability when they have great overall radios and people want to buy them why they just dont get in the right people and design a killer radio. For yaesu this was the FT1000D, which since then have left all the competition in the dust. Even in the subsequent years they have been unable to come up with decent design to kill off the FT1000D, yet that radio has been on the market for more than 10 years.

We wish Icom well regardless because they seem to be innovative thats for sure.

Will the new IC-756PROII have the typical Icom Bugs ?
I have purchased many new Icom radios in my 15 years of being a ham. I purchased all these radios in good faith only to find out there was always at least one major flaw (if not more) in the radio. Typically this flaw was usually something you would take for granted that the radio would do. This is very frustrating considering Amateur equipment is not easily refundable (at least not without 15% restocking fee) unlike consumer electronics which usually offer a no questions asked return policy.

In the late 80's I purchased a brand new Icom IC-761 over a Kenwood TS-940. When I got it home I realized it would not memorize split freq (as required in repeater operation) into a memory channel. I had just upgraded from an old Kenwood ts-440, what I considered a much lower quality radio. I thought I was upgrading, but with this one flaw I felt it was a step down when operating FM Repeaters. In fairness on HF there was no comparison, the 761 was far superior.

A couple of years later I purchased a new IC-735 I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, although there was no accommodation for Pl tone from the factory.

In or around 1995, I then purchased a new IC-736. I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, and even happier to see that pl was added. Only to find out that the Pl tones were not frequency agile (from outside the radio with out breaking out the soldering iron) as one would have hoped, I was forced to wire in an outboard Communication Specialist pl deck TE-64 to operate repeaters with different pl tones.

In 1998, I then purchased new a IC-756 , when I got it home I was glad to see that its pl tones were now frequency agile through the "set mode", this helped in operating repeaters. Now only to discover that the firmware was again inhibited from storing a split freqs and pl into a memory. (in my opinion this was going back two generations) With a call to tech support, talking to Gary, I realized at that Icom was not even aware that the radio would not store a split. The radio does have "quick split" function which was also on my 736, but this had always seemed like an after thought to me. The quick split feature does not work well if you live in an area where repeaters utilize 2 different repeater splits in the band plan. For example, my local 6m repeater has a one meg split, yet others within a 100 mile radius have a 500kc split. A few other observations I made on the radio. Icom now had eliminated the separate controls for the squelch and RF gain. These separate controls have been around since the days of the 745, 751, 751A, 761, 735, 736. There were many times I kept the RF gain up to eliminate the background noise, and closed the squelch to monitor a frequency on ssb, and now the elimination of the adjustable Noise Blanker width . Am I the only one who misses these features, what's next ?

In 2001, I then purchased a new Icom 756 Pro hoping that all the bugs in the firmware would have been cleaned up by now. When I got the radio home I observed that the FM operation was no different than my original Icom 756. I then contacted Icom customer service, again talking to Gary he informed me that Icom never did fix that "flaw" All the Kenwoods both new and old (570, 450 and 690), and all much lower price tag do it, and do it well on FM. Why cant the higher end competition grade Icom's memorize separate transmit and receive frequencies in memory with a pl ?

I now own a 706MarkIIG and an Icom 746 (purchased used) . On these two radios the firmware works perfectly in the FM repeater mode. Yes, I can even operate with split Pl on TX and RX !! I know that the 746 was released before the "PRO" and one would think that the firmware upgrades would have been available on the PRO ! Yes it would have been nice if the radios again had separate squelch and rf-gain controls, and adjustable noise blankers. Who wants to open up a radio just to adjust a noise blanker, especially on the 706 when operating mobile. Unfortunately 706 and 746 squelch circuits appear not to have any hystersis in their squelch circuit to track a weak signal. This is very annoying when you are operating on the fringe of the repeater mobile , or just working a weak signal. The squelch constantly keeps popping.

Icom radios work very well on the HF bands. If they didn't, I would not have purchased so many of them. Also I am sure these "flaws" might only be noticeable to a hand full of us that work FM on the higher frequencies. But if Icom as a manufacture puts FM in the radio, why not at least do it the right way ?

I now see advertisements in QST for the now upgraded version of the PRO. My question is, will the "upgraded PRO" have the same bugs in Firmware that inhibited repeater operation that the past two generations of the 756 ? Will Icom re introduce separate rf-gain and squelch controls ? Perhaps add an adjustable noise blanker ??? One thing you can be sure of , most likely Icom will increase the price !!

I am getting a circuit board for the WB4VVF Accu Keyer but I need a schematic for the thing. I think it came out in QST in the late 70's or early 80's. Anyone have a schematic or a copy of the QST article?

Thank you

Hello,

i have a motorola ASTRO mobile radio for sale, in Canada,

it is a model T99DX+138W with remote control head model 9000.

It is mint condition, the data cable linking the control head to the
radio is in perfect condition, full lenght.
I live in Canada, close to Montreal, and would prefer local buyers, to
avoid the problems of having to exchange money and merchandise.

Any question is welcomed...

Thanks...

I don't have a schematic any more, but I believe the first accukeyer schematic came out about 1976 since I built one about then [it worked very well, but my new tranceiver has a keyer built in. There were sever subsequent articles which added stuff like memory for contests, keyboard interface and the like which continued throughout the 80's Somewhere I think I may have a Handbook from the era which might have the schematic.

3401. IC-706MkIIG Filter - Antenna Recomendations

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-17 16:21:05 UTC
From: Ed <edhall_consultant@yahoo.com>
Message-ID: <9o58l0$2r8$1@bob.news.rcn.net>
Source record: 54555

Ok,

I have selected the 706mkIIG for one of my radios.

I have heard that this radio leaves SWL a little to be desired. The thread that I followed said that it had trouble blocking out strong stations near weak ones, Like the BBC channels etc.

So I would like to get a filter for it, the standard ones don't look good.

Also what about the best mobile Multi ban Antenna, then one for portable uses like on a backpack. Also Power supplies.

Thanks
Ed

I think it would be best to have individual radios, especially in a
disaster. With one radio, you can typically only do one thing at a
time, i.e. on band. In an emergency, one may wish to monitor a 2m, 440,
and a scanner at the same time. Seperate radios also give higher
reliability, if one radio dies, the others keep working. Not true with
a multiband radio, you have to send it in, and you would lose all comm.

> Elecraft gets the good receiver numbers at minimum cost by sticking to
> a "ham band only" design. As soon as you want general coverage you are
> in a different ball game.

Of course. But why is general coverage so important in a ham rig,
particularly one that is supposed to be high performance?

The K2 even challenges the receive performance of the Ten Tec Omni 6,
which is hambands-only.

A barebones K2 costs about $600 shipped. One that is loaded with every
possible option costs twice that much ($1211 shipped in the USA). The
fact that it can compare at all, in any category, with $3000 rigs is
simply amazing.

The K2 is not just an HF transceiver in kit form. It's an attempt to
create a viable alternative to the YaeComWood boxes. Elecraft
intentionally focused on some features and ignored others in the K2
(and K1) designs. For example, the mechanical design is intentionally
simple not just to reduce cost but to make the rig easier to build and
work on. The rig is tiny and has power-saving features because the QRP
folks like to backpack. CW features and performance are paramount in
the design because the market for QRP rigs is mostly CW ops.

Many of us simply cannot justify spending $3000 or even half that, all
in one go, for an HF rig. No matter what it can do.

For 30+ years I've looked for a CW rig that had the right
performance/price ratio. All I wanted was a rig that had decent basic
radio performance (sensitivity, selectivity, stability, tuning rate,
transmitted signal quality), covered all HF bands, had QSK and
defeatable AGC. Plus I had to be able to work on it myself. Things
like memories, passband tuning and general coverage mean little to me.
The only rigs that met my requirements all cost more than I could
afford. So I built my own stuff and lived with its shortcomings. Then
the K2 appeared.

Source record: 54559

I don't disagree with anything you said, Jim. The K2 has many features that make it ideal as a portable rig (which is the primary reason I bought one and participated as a part of the original field test group). Other rigs have different features that many people want and are willing to pay for. No one rig is ideal for every operator or every type of operation so we pick the one that provides the features and price that we want. Every design requires trade-offs in features, price, and performance. Mfgs make those trade-offs differently depending on what they want to accomplish.

I just went thru the process of trying to select a 2M HT. What a confusing mess! Some have better sensitivity. Some have alpha-numeric displays. Some use "AA" batteries that are easy to get. Some have tone-squelch on the receiver. Some have higher audio output than others. Some have power-save functions. The bottom line is that NONE have everything.

3408. FS Vintage Ham Gear

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-17 18:52:56 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <cErp7.4191$Md5.535796@newsread1.prod.itd.earthlink.net>
Source record: 54560

I have the following Vintage Radio items FS:
1.B&W Model 426 1KW Low Pass Filter for 1.5 to 30 Mhz, Price $25 shipped;
2.Voice Keyer, Type VOK 10 M1-22-80-11, Vector 1950. I don't know much about this
except that it appears to be an old VOX unit for a 1950/60s transmitter. It has an 8 pin male socket
on the bottom of a small red box and on top it has a 6U8A tube and a
Release Time Control Pot.
Price is $12.50 shipped;
3.Heathkit Original Mic for the Heathkit Lunch Boxes, Tower, Sixer, etc. It is in nice shape with original cord
and Mic Connector. Price is $20 plus shipping;
4.Heathkit Original 40 Page Manual for the Heathkit Sixer Lunch Box, Model HW-29A. It is in very nice shape
and it is complete with all construction diagrams, instructions, and
schematics. Price is $15 plus shipping;
5.DowKey T/R Switch Model DKC-TRM-1. This is the one with the 6EH5 Tube. The unit operates on
-135 Volts DC and 6.3 VAC. It is in very nice shape. Price is $25 plus shipping;
6.Heathkit "Sixer" Model HW-29A, Lunch Box. This transceiver looks like it was made yesterday, almost new,
but it has some mods. It has a phono plug for an out board speaker right under 'The Sixer" label on the front panel. Also, there are 4 small holes on the top of the cabinet and no handle. There are also a couple of small holes toward the bottom lower edges of the front panel. Other than that is looks very nice. It is untested. I do not have a crystal to try it out. Price is $25 plus shipping.
Thanks, Charlie Hugg, K5MBX

I agree with all of that, up to a point.

But there is an alarming sameness to all of the YaeComWood boxes that
are on the market. For example, it is assumed that everyone wants
general coverage so much that we're willing to sacrifice performance
in the ham bands to get it. It's assumed that all hams want SSB as
stock but CW filters as an option. AGC defeat is only provided on the
most expensive models. And so on.

Elecraft (and to a limited extent Ten Tec) give us a real choice.
Elecraft does it at a bargain price, too.

> have everything.

Exactly.

My problem is that the manufacturers didn't even have the basics that
I wanted for less than several grand.

--

While we're on the subject, here are my "complaints" about the K2:

- Too small physically (most ham rigs these days are too small for my
taste)
- Can't have the 100W PA and a 100W ATU in the same box at the same

time
- Filter performance, while very good on CW, is not quite up to what
is possible with cascaded multipole xtal filters

And that's about it!

Maybe there will be a K3 someday...

Dunno.. I'd think that you'd want multiband radioS... Why does it have to
be 1 multiband vs several single-band, iow?...
I've 2 scanners (a portable trunking-scanner and a 'general-purpose'
table-top thing), 2 2/440 radios, a 2m radio, and an HF rig.... Altho a
bunch of single-band radios might be great in some cases during an
emergency, most of us use 'em daily for other things where one doesn't want
a belt full of the things...

The 2g made repeater operation -significantly- easier thru the adoption of band-plan based offsets, commonly found on most 2m/70cm units today.

3416. Motorola Maxtrac Information

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-18 03:13:06 UTC
From: Jeff Scoville <scoville@sprynet.com>
Message-ID: <9o6ejsbnq1@slb5.atl.mindspring.net>
Source record: 54586

I was given information that the Motorola Maxtrac radio is 9600 bps packet capable, assuming that the transmit audio is injected at the junction of R223, C228, and R222 on the RF board. I have the radio and these instructions, but do not have a service manual for the Maxtrac. Therefore, it has been difficult for me to locate the junction of the three components.

I would appreciate any assistance that can be provided to locate these components (picture, photo, diagram, etc.) If anyone has experience with using a Maxtrac for 9600 bps packet, that would be helpful as well.

Please send information to scoville@sprynet.com. Thank you in advance!

3417. Gonset GSB100 with Peter Dahl transformer

Hi,
Selling a nice Gonset GSB100, SSB,CW, and AM transmitter. New Peter Dahl power transformer, filter capacitors. We all know how these have problems with the power transformers. The rectifiers have been replaced. (5U4) New driver and final tubes. Several capacitors and resistors have been replaced as needed. Front panel is very good, all lettering great. Tested on 75 and 40. Now the bad part. The string for the band selector slips, causing the drum to be off a little. Will need to be replaced. Also, it needs a 9006 tube in the "Relative RF" output meter circuit. Asking $425.00 plus shipping from Arkansas. Includes a W7FG manual. Also included, is a small card, indicating that this was number 29 of 250 made in this particular run from Gonset. There are quality control stamps and names on the tag. Pictures available to serious folks. I have a nice double box to ship to your QTH safely. Please reply to me direct, as I sometimes miss reading the list for a few days at a time. I can be reached during the day at 1-501-394-5589. Will list on the bay if it doesn't go here.

Thanks
Mike-K5VSE

3418. Re: new top of the line icom rig?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-18 03:39:12 UTC
From: willy <willyacht@yahoo.com>
Message-ID: <jizp7.18925$c5.151215@newsfeeds.bigpond.com>
Source record: 54568

Well put N2EY
The simple lack of performance and basic working functionality of so many manufactured rigs is so poor. My whine and gripe is with basic receiver performance. Some seem to think that this debate revolves around the PRO and we picking on Icom. The PRO is an example of all the worst design problems that plague so many ham radios. The reality is that DJ2LR has been writing about this for the last 20 years at least, in the various ham magazines and so many have just simply ignored this cheap advice. He wrote about leaving the antenna tuner in line during receive 10 years ago, and only now has Kenwood followed this good engineering practice. He wrote about dynamic range and the intercept point problems but we still have the vast majority of ham radio lagging behind radios that were made for the military 10 years ago. The ham radio manufacturers have not even yet caught up with the technology limits of the eighties, yet they dare to deliver such flawed performance in DSP radio like the PRO and called it the best thing since sliced bread. God some must truly be suckers.

When a Elecraft K2 comes put all some can complain about is it basic construction, and where the knobs lay. WOW as this even is more important than basic performance, performance that we must add cannot be beaten by any of the top range radios. So Elecraft has nothing to be ashamed about considering that all these manufacturers are huge multinationals with at least 30 years business practice behind them, and resources that leave Elecraft for dead. Yet even today they cant beat Elecraft.

I wish Elecraft would bring another radio call it A K3, make it as large as the Ten Tec Omni 6. Include contest grade bandpass filters or a tracking ham band preselector, a calibrated S meter in DBuv, low phase noise on transmit, hight intercept points 3rd of at least +30dbm preamp on, excellent transmitter IMD performance like -40db below 2 tones, a good choice of filter positions, audio DSP just for notching and bandpass, forget noise reduction etc, suppress the harmonics to commercial standards of 80db down, this will also make the contesters happy, include a tap to monitor your transmitter with one of the PC scope programs, have a IF output so that you can monitor the band just like the PRO but on a PC, include a rig blaster interface, forget the second receiver, have a low noise high intercept point beverage preamp bandpass protected, have a 200 watt output high IMD unit, include a flat audio repsonse to make the audio boys happy, 2 speech processors, a audio split band and a high quality RF one as an option, a low distortion audio output amplifier and pre-amp, this 20% distortion and hiss really has to be ended by all the current boxes, and so on. Yes you see the list is a long one that has been ignored by all these manufacturers. Go ahead Elecraft i will buy 5 with above specs, you nearly there with the K2. But hey the K2's box is too small for all the above bits and pieces.
ANYWAY BRING ON THE K3. Let America show the word how to build a decent ham

rig, well if you want to go buy a Magnum Eagle thats okay, i forgive you.

Source record: 54569
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Why wait ???we all know what is possible, the changes to the PRO are cosmetic. It would have to make a huge leap to bring it upto the basic standards of the Yaesu MK5. I have read all the JApanese reviews, i speak Japanese and i read it. So all the information i have on hand is pretty good. If the PRO2 can beat the the Elecraft K2 i will eat my hat and apologise to you and Icom. But somehow i think i wont be eating my hat for a while. Not with the current range of boxes. I work in the electronics industry and have good connections, and when i got my PRO i gave it to several people to evaluate. I asked some top big time project managers about costs of manufacturing the PRO, most gave a figure of $500 bucks. I have nothing against capitalism. But hey some people need to wake up when they selling such poor performing products for such big bucks. Think about that. Elecraft sell the K2 for $500 bucks and they would make a nice profit, but hey at least they deliver. If you have better information than i have let us know.

What is the

Interpoint 3 at 20khz spacing
the IMD dynamic range
the blocking dynamic range
Whats the AGC like
Will we still overload from shortwave broadcast stations
will the signals sound hollow in receive
hows does the receiver respond with close signals within the passband etc
etc etc
Hey if i wanted a radio that sounded like the PRO i can build a direct conversion receiver with a better intercept point than they can for 20 bucks.
Ahh the most important thing do they guarentee the performance of the receiver? Go read the Icom brochure, look at the little * against the receiver data of with miserable 100KHZ spacing, no not 20 KHZ or less and tell me if they guarantee the performance now? Its still experimental and will never be a top line contest or DX radio, many casual operators will buy it. Buy hey why pay $3000 when i can buy TS830S a monitor scope and have none of the bugs for $500 bucks. But each to their own.
These are issues that matters to the serious people like contesters and low band dxers. Fish finders and flashing colors dont impress me, only basic technical performance. Maybe you happy buying car with noise, square wheels, a leaky gas tank and transmission noise. I doubt you do, why then tolerate this sort of problems with ham radio equipment. Its performance that counts everything else is a token gesture.

Dunno , I haven't really noticed this too much, but it may be my
location, antennas, etc. You could always kick in the ATT if the
signals were overloading.
The filter performance seems to be too wide for many users. Myself, I
like it, as I like a wide filter on SWBC because the audio is better.
I don't like a standard 4.8 filter for AM-BC, which is what you would
have if you had a standard SSB filter, etc. Some have done AM mods,
but I haven't really kept up with it as I prefer the wider filter.
Also, by now there may be a better AM filter for the 706, but I bet it
isn't cheap. I'm more worried about getting a CW filter in mine. The
706 probably could benefit from a slightly tighter SSB filter, but
again, it doesn't bother me much on SSB as I like better audio. If I
were a dx chaser on 20m, I'd probably get the 1.9 kc filter. But
normally, I don't like the audio from a filter that narrow. Actually,
a 2.1 kc would be a better choice for me to cut crud but still sound
ok. The default AM on the 706g is very wide. About 9kc if I remember
right. This is what bothers the dx'ers I think. But it sounds great
for casual listening if you have a good speaker. Also, I'm fairly
sporadic as far as SWL, so I may just haven't noticed it yet..The best
portable antennas are usually dipoles thrown over trees/tree branches,
or whatever. But I use my mobile antenna in many cases. Power
supplies? Dunno... I run all my 12v rigs off battery power and
chargers. MK

TX Mod For ICOM 735

The mod for gen/cov tx for the IC-735 involves removing D33 and D34
from the main board. You'll have to lift the PA module up to do this,
locate the diodes and simply snip one end of each. Very simple, but
it's amazing just how many screws need removing in the process!

I am selling my Ten-Tec Omni V station. Consists on the Ten-Tec Omni V model 562, matching speaker/power supply console model 961, desk mic model 705, and remote tuning knob model 301. Every filter slot is filled. Includes the standard 2.4kHz filter, as well as optional model 288 1.8kHz, model 285 .5kHz, and model 282 .25kHz, as well as model 219 .25kHz filter installed in the 9mHz IF. Built in noise blanker and speech processor.
The receiver section of the Omni V is considered by many to be the best receiver Ten-Tec has ever offered. Just back in May from Ten-Tec for an alignment and replacement of internal battery, as well as a complete check up. Includes the original manual, and original cartons. In excellent condition. Price for all: $1200.

My favorite brother-in-law is being called up to active duty. He's a U.S. Army Drill Sargent. I've had a dormant DX-375 collecting dust on my shelf for many months. So I've decided to send it down to him along with a portable antenna.

Might I suggest that if you have a friend or loved one who is or will be participating in active military duty, that you consider getting them a shortwave receiver as a gift. There are many inexpensive units available at Radio Shack or many mail order companies. It will give them the opportunity to listen to programming from home as well as from our allies.

May God Bless America.

If the 756 Pro is such a great rig, then how come Icom has to introduce a Pro II to fix the deficiency of the first version. Yes, I learned very fast not to buy Icom after paying big buck for the first 706 release. Never again, give me Yaesu!

"WR2M" <wr2m@optonline.net> wrote in message news:3BA4F6E8.40659A02@optonline.net...
Will the new IC-756PROII have the typical Icom Bugs ?

I have purchased many new Icom radios in my 15 years of being a ham. I purchased all these radios in good faith only to find out there was always at least one major flaw (if not more) in the radio. Typically this flaw was usually something you would take for granted that the radio would do. This is very frustrating considering Amateur equipment is not easily refundable (at least not without 15% restocking fee) unlike consumer electronics which usually offer a no questions asked return policy.
In the late 80's I purchased a brand new Icom IC-761 over a Kenwood TS-940. When I got it home I realized it would not memorize split freq (as required in repeater operation) into a memory channel. I had just upgraded from an old Kenwood ts-440, what I considered a much lower quality radio. I thought I was upgrading, but with this one flaw I felt it was a step down when operating FM Repeaters. In fairness on HF there was no comparison, the 761 was far superior.

A couple of years later I purchased a new IC-735 I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, although there was no accommodation for Pl tone from the factory.

In or around 1995, I then purchased a new IC-736. I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, and even happier to see that pl was added. Only to find out that the Pl tones were not frequency agile (from outside the radio with out breaking out the soldering iron) as one would have hoped, I was forced to wire in an outboard Communication Specialist pl deck TE-64 to operate repeaters with different pl tones.

In 1998, I then purchased new a IC-756 , when I got it home I was glad to see that its pl tones were now frequency agile through the "set mode", this helped in operating repeaters. Now only to discover that the firmware was again inhibited from storing a split freqs and pl into a memory. (in my opinion this was going back two generations) With a call to tech support, talking to Gary, I realized at that Icom was not even aware that the radio would not store a split. The radio does have "quick split" function which was also on my 736, but this had always seemed like an after thought to me. The quick split feature does not work well if you live in an area where repeaters utilize 2 different repeater splits in the band plan. For example, my local 6m repeater has a one meg split, yet others within a 100 mile radius have a 500kc split. A few other observations I made on the radio. Icom now had eliminated the separate controls for the squelch and RF gain. These separate controls have been around since the days of the 745, 751, 751A, 761, 735, 736. There were many times I kept the RF gain up to eliminate the background noise, and closed the squelch to monitor a frequency on ssb, and now the elimination of the adjustable Noise Blanker width . Am I the

only one who misses these features, what's next ?

In 2001, I then purchased a new Icom 756 Pro hoping that all the bugs in the firmware would have been cleaned up by now. When I got the radio home I observed that the FM operation was no different than my original Icom 756. I then contacted Icom customer service, again talking to Gary he informed me that Icom never did fix that "flaw" All the Kenwoods both new and old (570, 450 and 690), and all much lower price tag do it, and do it well on FM. Why cant the higher end competition grade Icom's memorize separate transmit and receive frequencies in memory with a pl ?

I now own a 706MarkIIG and an Icom 746 (purchased used) . On these two radios the firmware works perfectly in the FM repeater mode. Yes, I can even operate with split Pl on TX and RX !! I know that the 746 was released before the "PRO" and one would think that the firmware upgrades would have been available on the PRO ! Yes it would have been nice if the radios again had separate squelch and rf-gain controls, and adjustable noise blankers. Who wants to open up a radio just to adjust a noise blanker, especially on the 706 when operating mobile. Unfortunately706 and 746 squelch circuits appear not to have any hystersis in their squelch circuit to track a weak signal. This is very annoying when you are operating on the fringe of the repeater mobile , or just working a weak signal. The squelch constantly keeps popping.

Icom radios work very well on the HF bands. If they didn't, I would not have purchased so many of them. Also I am sure these "flaws" might only be noticeable to a hand full of us that work FM on the higher frequencies. But if Icom as a manufacture puts FM in the radio, why not at least do it the right way ?

I now see advertisements in QST for the now upgraded version of the PRO. My question is, will the "upgraded PRO" have the same bugs in Firmware that inhibited repeater operation that the past two generations of the 756 ? Will Icom re introduce separate rf-gain and squelch controls ? Perhaps add an adjustable noise blanker ??? One thing you can be sure of , most likely Icom will increase the price !!

Bill, WR2M

Then Why is Yaesu Dumping the MKV and the 756Pro continues to sell and grow?
Ill tell you why, all those specs dont mean much when I can can take a 756, not even a pro, and kick the MK V 's tail...hearing and transmissions...but truth is ,its what you like and are used to...I get em all, still like straight 756 for anything under 10,000 bux...IMD? XYZ? BLAH BLAH... Dont get me wrong Yaesu makes great radios...IF you like em fine....But statistaclly, they are selling poorly and thats the name of that....IF I have to use a Yaesu, give me a 990 or a 920 thank you....! Opinions...we all got em...God Bless America for letting us chose!! Thats the best part of all. 73 Murray As a trader/buyer/seller, I have learned which is the best radio, wanna know? Its the one "youve got!!" hihi

Save your money and dont buy this CB crap. Get a Icom 718 or a Kenwood TS570s, these are both good radios that have good basic operation. There receivers are light years ahead of this converted CB junk. The price of the IC718 is so good you would be crazy to buy second hand or CB type ham radio. This sunspot cyle will slide like a lead balloon. Having those extra bands will be a help in the lean years.

My Icom IC-T7H handheld draws current from it's battery, even
when "OFF". With a fully charged 9.6V Nicad Battery Pack (BP-173) attached,
I'll get a low voltage warning within a week, even though the handheld is "OFF"
and not in use. The user manual states that a small current will be drawn
when OFF. Mine draws about 2.5 ma. when OFF. Has anyone else experienced
this with their IC-T7H??

Hello there,

Way back in the early 1980's, Ham Radio Outlet imported from Japan and sold a small one knob CW Keyer. It was my first keyer and I lost/sold it some time back.

I'd really like to have another (or two) of that exact unit if you have one laying around. It can be dead or alive... I don't care. A copy of the supplied paperwork would allow me to fix the one dead one I just found and purchased... just about anything would help.

So, drop me an Email if you have or know anything about this one brand / model of keyer. It was a one knob unit (speed adjustment) in a small black box, no side tone and ran off a 9 volt battery.

thanks much
73's

I've been looking too, and just ended up with an Icom IC-T2H in that price range. The things I liked about it were:
1) 6 watts output
2) Tone Squelch in the receiver built in (not an added option)
3) CTCSS tone for the transmitter can be set to a different frequency than the Rx.
4) Uses "AA" batteries which are easy to get from any drug store (good for emergency use)
5) 500 mW audio output - lots of volume for use in noisy areas
6) Able to receive Wx broadcasts
7) Power save function to minimize battery consumption
8) BNC antenna connection - easy to connect an external antenna

Neither. Why limit yourself to just 2 meters when you can get a 2m/70cm Icom IC-T7H dual band, 6 watter at www.gigaparts.com for $189?

A ham that Elmered me almost 10 years ago gave me the same advice. I've never regretted that I bought a dual band radio as my first radio. It was an Alinco DJ-560T. Wow, have we advanced!

Whatever your decision, we welcome you!

Radio Shack had two problems with their handhelds as I saw it but the newer ones may be better now.

First the output power was lacking but the biggest problem was the lack of a touch keypad. Feature wise I think they lacked features of other manufacturers. For my input I think the two which recommended the ICOM radios did good. Icom has always had a good solid two meter radio even back to the old durable IC2AT followed by the IC-02AT.

For my part Radio Shack is still worth avoiding but that is just an opinion.

3462. Confused on first radio selection

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-19 05:56:40 UTC
From: Tim <sixfingers.removespam@texoma.net>
Message-ID: <9o9c5802t48@enews4.newsguy.com>
Source record: 54467
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

I got my ticket back in June and still have not made a radio purchase :(

My Needs and Interest...
Looking for a mobile unit, preferred dual band with detachable face plate. General repeater and voice purpose. Also Interested in extended rx (aircraft and so on). May be interested in using with GPS at some point. Also would like a unit that can double as a base unit. I will be going for my extra credit before too long, so HF is not out of the question. Perhaps a second radio will be needed at that that time.

A few choices I had picked out are...

ALINCO:
DR-605TQ
This would be my low end option, reviews seem fair. BUT lacks in options wanted. Seems like a good starter however.
DR-610TQ (preferred)
Of the two Alinco's I like this one better because of the extended rx capability, but reviews are mixed on this one. Problems with the fan running continuously and annoyingly?

KENWOOD:
TM-V7A
I like the features on this radio a lot. ready for use with GPS etc. A major concern from reviews is the blue LCD screen being hard to read in daylight situations.
TM-D700A (preferred, but confused on some features)
Here again, this radio seems to have more bells and whistles than the first, and possibly some features I may never use(data packet), but overall looks great and reviews are great.

YAESU
FT-7100
I was sold on this radio as a simple starter, but the reviews are terrible...totally changed my mind on this one.

ICOM
IC-706MKIIG
This would be the dream rig! Not a dual bander, but all modes (once I get my extra), and price and reviews cause me to revisit this radio time and again. Maybe this will be the second rig later down the road. Maybe I should just take the plunge?

Being the new guy on the block and lacking experience in radio's, I could seriously use a little direction here. The choices are vast, and I am

somewhat confused as to how I should proceed with my first purchase. Any suggestions I have not listed here that fall into these categories?

Any help or direction would be greatly appreciated

Thanks

Jim,
The difference between the 195 and the 196 is this: the 196 has a backlit keypad, That's it. All other features are the same. The version of the 195 that RS is selling (at least the one they had on sale a couple of months ago, I bought one) has the AA battery holder, not a NiCad or NiMH battery pack, and it doesn't come with the wall wart charger.

But Wait!! Alinco has just come out with a dualband version of this radio, the DJ-596T. And AES is selling it for, are you ready? $209.95!!! Can't beat a deal like that with a stick!! I like my 195, it's a good little radio, excellent audio, good feel, so the 596 ought to be a barn-burner! Going to order one myself here in the next week or so. Was going to order it last week, but decided to hold off until Priority Mail got back up and running.

Don't get the RS handheld, it only has 600mw output, worthless unless you are with in three to five miles of the repeater. As for the 195T/196T, they are great HTs, but for a little more ($209) you can get the new dualband version, the 596T. Here is a link to AES's page on the 596T:
http://www.aesham.com/display_pages/dj596.html
I can't think of another dualband HT on the market with these features for only $209, I'm ordering one soon myself, to take the place of the 195T I got this spring. I'm going to pass the 195T on to a new ham who just passed his test, on a try it/buy it deal.
As for the RS mobile 2m rig, I'd pass on it. Compared to the other 2m mobiles currently available in the same price range, it is very limited. I'm big on Alinco rigs, just got the DR-135TP, which includes a built-in TNC, but the same radio without the TNC is $169. I've had compliments on my great-sounding audio. The Icom IC-2100H, the ADI AR-147+, and the Kenwood TM-261A are all available for about the same price, and all these rigs have many more features than the RS rig.

RS does have a new dualband HT coming out in November that looks promising, lots of great features, 4.2 watts with included battery, for $269.

Well, when my brother's squadron was called up for Desert Storm duty, he took a Radio Shack multi-band portable with him, in fact he bought it just to take with him. He didn't have any problems. Of course, a Major (Command Pilot) in the Air Force might not be hassled as much as a PFC in the Army. Like my brother said "It sure beats walking!"

Myrle,

My IC-T7H acts the same way. I have never measured the current drain in the OFF MODE but usually in a week to 10 days a fully charged battery will be depleated.

Here we have another spammer. It misleads
in the subject line by saying this item
is FS "OR" For Sale "OR" misleads and
indicates said item is for sale when it
is actually FA = For Auction. The FA is
used by those of us that do not Do Auctions.
We set our spam filters for FA in the subject
line and we do NOT have to see the auction
spam. Do not trust this person.

"If they Lie in the subject line"
They will have no problem misrepresenting
the JUNK they have at the Auction..

If you have received this message it is
because I saw a subject line that interested
me and when I downloaded the message
It was nothing more than your auction SPAM
and was NOT what the subject line said it was.

Some of the Real Sleazy people will make
it look like a reply to another message.

Easiest way to avoid this message?
Do NOT LIE in the subject line..

Just My Opinion..

Bob

Mine does this also, but I think it is a function of the Nicads rather
than the radio. Nicads tend to lose charge in storage at a rather
rapid rate. Might try a different pack. I don't seem to have the same
trouble with the AA pack.

Tim, you have done a great job in the research. I can not help you with the exact radios you've mention because I do not own any one of them. I've also noticed that the manufactures are continually changing models so what is being offered today probably will not be around in a year or so. You know, I have purchase a number of VHF/UHF radios from different manufactures and have been pleased with them all. You know, I don't remember what the review said about them. Be careful about the reviews too. They are a good indicator but the ease of programming them without resorting to the manual is an important item for me. NO, I am not an old fuddy duddy and not afraid of programming a radio, but sometimes the logic the manufacture uses is really strange and it isn't fun when you travel to a different town and want to program in that towns repeater frequency. The more whistles and bells they have, the more complex the programming. You mentioned you want a dual bander. Great! Is there sufficient UHF repeaters/activity in your area to justify it? Where I live have lived, there is/was zip/zero/na-da UHF activity. I have one dualbander and hind-sight tells me that was a waste of money because I have never used the UHF side of the radio. Your location can be completely different.

It sounds like you are trying to buy just *one* radio that fits all your interest and that maybe too much to ask for. Think about owning multi radios. One for the car, one/two or three different ones for base. I've found out that it is a pain to constantly install/remove a moble unit from the car to the house and back. It is nice to install a moble unit in the car and be able to leave it there, which means you would then want another at the base. I have three vehicles and each one has it's own VHF radio.

Really need aircraft coveage beyond what the radio rx usually covers?

Know nothing about GPS and ham radio relationship.

Sorry I can not be of more assistance.

I was given a GE handheld radio. No charger. This looks like a sturdy little radio. I wanted to know if this is a programable unit or crystal unit? Also, if programable what would the equipment and software run.

The back of the radio has a lable with the following:

DOC: MPI4U 2872121031
COMB: MP4U2

TIA

Jim Reid

3475. Re: Give a soldier a SW receiver.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-19 11:26:21 UTC

All,

I've read all the threads associated with this post, and agree it's a good idea. For those soldiers staying in the US, there really is no need for a SW receiver - soldiers today have easy access to cable TV and the internet in their barracks, so staying informed is no problem. However, for soldiers deploying for "points unknown" a good AM/FM/SW radio with a simple wire antenna can be a godsend. During Desert Storm I remember laying in my bunk in the middle of the Saudi desert the night the bombing campaign started and listening to a faint BBC AM broadcast on my old pocket radio - and hearing a live report from Israel that Iraq had fired SCUD missiles at Tel Aviv and that the Israeli military had detected nerve gas! (Fortunately this report was later retracted - the SCUDs did hit, but no nerve gas). Talk about immediate reporting!

There is little chance that the military will confiscate personal radios. Once a significant US military presence is established in an area (and the host nation agrees), Armed Forces Radio will establish a broadcast site, usually low power FM. This will bring servicemembers music, live feeds from stateside radio news and 'offical' information, so the military sees radio as a valuable way to distribute information and keep the troops entertained. However, until this service is established SW is about the only reliable way to get 'western' news and information. If you have a service member who is deploying my strong recommendation is to provide him/her with a good, small, inexpensive AM/FM/SW receiver that uses AA batteries (so they can also use them in their cd player), LOTS of spare batteries, a switchable (110/220) 'wall wart' power supply with interchangable plugs (RS sells them), headphones (ear buds are best) and a long wire antenna (a simple length of wire with an alligator clip works just fine). Pack it well and keep it small (remember, if it can't fit in a duffle bag it can't go!).

3476. FTBasic development preview

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-19 11:34:01 UTC
From: Bob Freeth <bob.freeth@dial.pipex.com>
Message-ID: <3ba882a3$1_1@mk-nntp-1.news.uk.worldonline.com>
Source record: 54386

The current state of FTBasic development is now available at

http://www.bob.freeth.dial.pipex.com/polarplot/download.shtml

There are lots of changes: conventional File and Options
menus which replace quite a few sliders/buttons; initial support
for the FT1000MP and FT990; a new panel specific to each rig;
a revised look to the Memory Grid screen; ...

The purpose of posting this development preview is to give you
the chance to see what is coming and influence the development.
Bug reports are particularly welcome, as are your views on the
way the program is heading.

I don't have access to FT1000MP or FT990 rigs and am working
mainly from copies of instruction manuals, so your guidance on
what works (and doesn't) and what's needed to be done will be
especially helpful.

73,

Bob G4HFQ

3477. Kachina Problem

3479. Heil HC-4 element doesnt work ?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-19 14:05:56 UTC
From: dxer@aol.com
Message-ID: <20010919100556.14762.00001826@ng-bd1.aol.com>
Source record: 54479

I bought the Heil HC-4 DX element. I put it in an old Turner mic, the mic is not amplified or does it have a switch for switching the impedence. Very simple.
I have a Kenwood TS-180S and the mic I was using is a Shure 444D.
I put the element in and with hams locally and across the country I compare the two microphones and no one could tell any difference between the two mics at all. Someone recorded me and e-mailed me the recording and I could not tell any difference. I have heard the HC-4 as everyone else has and everyone agreed that the HC-4 should have had more punch than the 444D.
I called Heil and told them this and they said that there should have been a difference, I took this element back and got a second one. Did the same thing and the results were the same, no difference.
I can't think of why this is. Anyone have any ideas ?
Thank you
Craig

If he's in a moderate to big city, he should be okay on uhf repeaters. If there's any doubt, he can get a copy of the ARRL Repeater Directory, or he can go to http://www.artscipub.com/repeaters/ and look up the repeaters in his area.

I would recommend the Kenwood radios. I own the TM-V7a and I have no major complaints with it other than the blue display is hard to read in daylight. The TM_D700 is what you want too get if you're going to get into APRS with the GPS.. Everything you need once you get the GPS is already there. I have played with one and it's fairly easy to program. For APRS it displays all the info on the front panel. Most of the dualbands have cross-band repeat capability so you can use them as a repeater in times where you need to extend the reach of your HT. Just my opinion. I have used Dual band mobiles for 6 yrs now and they have all been Kenwood. I have five HT's four of which are Kenwood. So I'm slightly biased. Dave N0XBN

Mark,

Thanks for the reply. Good deal on the DJ-596. I've also just
discovered the Yaesu FT-50RD is also selling for $209.95. (At AES,
HRO and others) Seems like a great deal.

For another $60 or so you get another band and extended receive (up to
999 MHz) with the Yaesu. Now I'm really confused!

Does the 180S want a high- or low-impedance mic? The Heil is a high-
impedance element. If the 180S wants a low-impedance mic, buy the
high-low impedance transformer from Heil.

Did you try both the "telephone cord" and the larger cord? I had some
trouble that turned out to be connection related.

If you have the same software on all 3 PC's you might consider this problem
I had.

After running my Camera (Chinnon) download software, SOMETIMES the Kachina
can not talk to the computer and is stuck in transmit until I POWER OFF boot
the PC. "Restart" does NOT fix the problem. When doing the power off
reboot, the pc continues to hold the radio in Transmit until windows
succesfully loads. The camera software apparently occasionaly sets up the
port in some non standard way.

3490. Advice on a 2m/70cm all mode rig?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-19 18:08:29 UTC
From: tek_guy@hotmail.com
Message-ID: <cbf4a67d.0109191008.68d3b6f0@posting.google.com>
Source record: 54491

Sometime in the near future (whenever I get the $), I'd like to get a 144/440 mHz all mode rig to work satellites and SSB DX. I have under $1000 to spend. I've looked at the following rigs:

Kenwood TS-790A
Icom IC-820H
Icom IC-251/451

Out of these 3 (which seem relatively affordable), which one would be the one to get? What would be good asking prices for them?

Thanks.

Jim

Well put Brian.
I've never heard of a commander confiscating radios. They usually have
better things to do and they have MUCH bigger problems if they're concerned
with troops hearing about military operations via open source, global
broadcasts:)
Can't stress how right you are about AA batteries. Sure, the military has
better resources for cable tv and internet but it's a misperception that a
soldier, sailor, airman, marine conducts business from a barracks. All the
services are familiar with the luxury of canvas, whether it's to prevent
heat stroke in the desert or frostbite in the balkans.
What it all boils down to is this: If a serviceman is deployed, ONE luxury
is probably the only thing he can squeeze in. Some carry a deck of cards,
others carry a walkman (I used to carry a hairbrush because a cargo pocket
was my personal refuge).
Help a brother out and ensure that he's got at least ONE thing to remind
him he's still human and deserves something just for him. It'll keep him
closer to home.

3492. Re: ICOM IC-T7H Current Drain

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-19 19:19:04 UTC
From: Kilo Charlie Eight Papa Mike X-Ray <kc8pmx@tm.net>
Message-ID: <Ic6q7.3138$pH1.378479@monger.newsread.com>
Source record: 54493

I can't remember a time since I have had my T7H off long enough (usually never off more than 36 hours). I use it also as a scanner, therefore I usually listen to it alot. I have the frequencies also programmed in for my fire department, and also a couple of the EMS and Law Enforcement freqs' in it also. I have about 30 amateur freqs. programmed in and the rest are public service. I do know that I seem to get a rapid charge from the cigarrette lighter cord, (a much better charge) that using the supplied "wall wart" transformer.

One little tip... use the thing at least once a week! At least maybe monitor 146.520 or 446.000 which are the simplex calling frequencies.

Hi Bill,

gee, it is a high time for you Bill to abandon ICOM. All our ICOM radio equipments in our club has failed. The list is long:IC202 IC 402, IC751A, IC 745, IC706MKII, Icom 970H. But the Kenwood's 850, 430s, 510, 515 Never Ever. Yes the last in family TS690SAT has to be fixed. Yaesu, Ft101b, FT221R, FT1000MP (our) present radio.is doing fine. My Icom IC706MKII has a garbage of receiver and after two repairs (bandswitching diodes) i am looking for Yaesu FT100. My main radio is Kenwood TS930s. Icom .... i will close the chapter soon

Best regards,

Nermin S58DX

This unit was made in the mid-1960's by RF Communication of Rochester, NY.It uses a single 8164/3-1000Z power triode tube. It covers from 2MHZ to 30 MHz in ten steps. It can be tuned either manually or automatically with servo motors. This unit comes from a silent key and was given to our club. All I can tell you that the filaments of the tubes light up and the servo motors work. NO high voltage tests have been done. This is a very heavy duty unit. It weights about 250 pounds. This unit is for pick up or delivery (?) only. It is located in Northern New Jersey. We have no idea what this amplifier may be worth. If interested make us an offer. Any questions or offers should be sent to sawman2@aol.com. Will send pictures apon request.

The paperwork I got from Heil says that it is a rather low impedence at from
500 to 5,000 ohms.
The TS-180S manual says that the microphone input is designed for 500 to
50,000 ohms. Low or high.

Source record: 54400

I used to have a Yaesu FT-736R which had 2 meters and 70 cm and also the added on 6 meter unit, all mode. The radio was very good in both transmit and especially receive. I worked all forms of DX, meteor, aurora, sporadic E and satellites.
You might want to look for this radio.
There is an earlier version of this radio, the FT-726. I dont know much about it and if it covered 70cm or not. But if it has what you want the price difference might be important.

From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3BA9177D.5D63BB7D@dialpoint.net>
Source record: 54398

You might want to check out the Icom 706mkllg it is under $ 1000. To work the sats you really need to be able to listen and transmitt at the same time. Not sure if the rigs listed below will do it. The 706 won't. If the Icoms 251/451 are the old ones that have the battery that holds the programming , then I would not want it. If the battery dies tehn you have to ship it off for reprogramming.

Tim,

I currently own two IC-207 mobiles and I've owned three. Dual-band, remote head option...typical options for a $300 radio. It's a real workhorse. I don't care to listen to both bands at the same time, so this radio fits my needs.

Craig, now I'm really confused. I remember the paperwork for my HC-5 element saying it wouldn't work well with a transceiver needing a low impedance mic. Oh well. How close are you to the mic? The HC-4 and -5 want you within 1-2 inches. And you'll probably need to crank up the mic gain also. don p

A few thoughts:

1. You can never have too many radios.
2. All-mode, all-band radios compromise -something- to get that all-everything performance. My icom 706/2g is not nearly as sensitive on VHF/UHF as my Yaesu FT-8100 mobile dual bander.
3. Dual-band FM radios are perfect for mobile use, and far better than HTs. If your daily drive is less than 30 minutes, a mobile HF rig is not a good idea since it may take that long to make a contact.
4. Buy what you want now, it will make a good backup/secondary radio in a few years.
5. You might want a mobile dual-bander that can do cross-band repeat, like my Yaesu FT-8100. Few can do that.

Surplus Sales of Nebraska has 3 or 4 rockers at 15 amps and a toggle at 20 amps
for 110/220 vac.

The trick, I'm guessing, will be matching the hole in your amp faceplate.

One other idea, you might check the web sites for Alpha, Henry, Command, QRO and
Ameritron to see if any current amps have a switch that looks like yours.

3518. Curtis 8044 keyer chip ???

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-20 04:21:47 UTC
From: ai928@FreeNet.Carleton.CA
Message-ID: <9obqsr$8pr$1@freenet9.carleton.ca>
Source record: 54419

I have a small circuit board with a single IC on it. This IC is labelled, "Curtis 8044 keyer" and what looks like a date code of "7830" (I presume 1978, week 30). So, I expect this is a circuit board for an electronic keyer.

I am wondering what are the features of the 8044 chip? Is it an iambic keyer? Does the chip have any memory for "canned" messages? Does anyone know where I can find a spec sheet for this chip (preferably on the web or by FTP) ?

TNX ES VY 73,

Ed (VA3PU).

If the Radio Shack HT is the HTX-202 then I would go for it. The 202 was my first radio I bought when I passed my test 8 yrs ago. The only things are you can't modify it and it doesn't have extended receive coverage. I still have mine even though I've bought other brands since then. I can't count the number of times I've dropped it and it still works. It also comes with an Alkaline back as well as the ni-cad pack at no extra cost. Dave N0XBN

Well, I own TWO Alinco DR-610TQ radios, and obviously like them. Dual Band receive (this can be VHF-VHF or UHF-UHF, as well as VHF-UHF), extended band receive, crossband repeater. The fan running all the time is no big deal to me. First, it doesn't kick on after power up until you transmit the first time. Second, it isn't that loud, really. The fan on my home power supply is MUCH louder that the fan on the 610. In an automotive environment I don't even notice it. I would recommend the "Q" option, which is CTCSS decode as well as encode, which is standard on the "T" model. Drawbacks: You'll want to keep the manual handy, it's not as intuitive as I'd like. Wish it had alphanumeric display. The extension cables for the remote mount head are either 3 meters or 5 meters long, I'd like one about 3 feet. The 610 can be used as a packet/GPS rig, but you'll need a TNC, which is a hassle in the mobile. I just bought an Alinco DR-135TP for that purpose.

I have a friend with the Kenwood TM-D700A, and there is one drawback to the built-in APRS operation. When the radio decides it's time to transmit the APRS signal, it interrupts whatever you might be doing, even if you are transmitting at the time. I can always tell when Ryan has the APRS enabled, without looking at my APRS screen, because his audio chops up periodically.

And, under the heading of minor annoyances, both the Kenwood and Icom mikes have a silly little loop hanger, instead of a button on the back. Friends of mine with these brand radios ended up coming to me for the buttons which I scrounged from a box of old hand mikes I bought at a fleamarket awhile back. Then, when I bought the DR-135TP, it had the same thing, wouldn't you know. ARRGH!

To give you an idea how I feel about Alinco radios, I currently own 2 DR-610TQs, a DR-600TQ, a DR-135TP, and a DJ-195T HT, and plan to buy a DJ-596T dualband HT. Alinco may not be the best on the market, but they have a solid mix of features at a good value, price-wise.

Hope this helps.

That just means the output is fairly low from that element, and many radios with a low impedance mike input will not have enough drive. I'm not sure about the HC-5, but I once had a HC-3 and it was low impedance at about 3000 ohms, and it's a ceramic element. I use a low impedance audio technica mike on my 706 with a low z input and I have to use a preamp as I only get about 1/2 power mike drive without it. Icoms have always been notorious for needed a lot of mike gain, and the older icoms used an outboard mike preamp. Now my same A/T mike on my 830 does full power and needs no preamp. And it's also low/high Z input. So just depends on the radio. You can have the correct match and still not have enough mike gain on many radios. Usually icoms. Most icoms are set up for electret condensor elements that run off a voltage on the mike line, and have a lot of output compared to many other mikes. In fact, unless I'm mistaken, all icoms mikes are condensor now I think. Even the hand mikes, and the desk mikes have been for a long time. I know my stock 706 hand mike has an electret element in it. MK

Tim,

If you are interested in dual band, and not really going to
use APRS, I would suggest checking out the Kenwood
TMG707A. It does both bands, extended RX, modifiable
for wide RX by clipping one wire inside the display head,
only operates one band at a time, has a LARGE display with LARGE letters,
illuminated amber display with 5 brightness settings, etc. Check it out on
http://www.kenwood.net/products/index.cfm?AMA=open&ama_mob=open&radio=TM-G70
7A&selection=Amateur&ID=52
You can view the radio itself, product brochure and also operator manual
online. I have owned the radio for about 2 years and am quite happy with
it. Easy to program, quiet fan, but the drawback is that the fan comes on
every time you xmit, this can be slightly annoying but you won't hear it
in a mobile installation. I hear it only because it's on my desk and I'm
using
it as a base.

Hope this helps!

I'd also make sure it isn't one of the milli-watt models from RS; it doesn't
cost any more to get a good handheld with 5 or 6 watts output. My 6-watt Icom
is 6 watts out -- cost $139.

Tnx for reading my question.

After setting up the Lower, Start and Upper frequency the Smart Search
does not start when pressing [ENT] in Smart Search-mode. It just
switchs to the VFO again.

Does anyone have the some symptoms?
Any solution ?

Tnx for your help, Michael KG0UB ..

When all else fails try Rat Shack or better yet the online version at
http://www.radioshack.com
that way you won't have to see the "Deer In The Headlight" look from the Rat Shack employee
when you ask for the switch you need. :)

I was in the same boat. I went with the Yaesu/Vertex VX-150, and
have been quite happy with it. The store I went to (AES) recommended
a brand new Icom the designation of which escapes my memory as their
first pick, and the VX-150 as their second pick. I liked the VX-150
more. Extra batteries / chargers are pretty steep though. You can get
a AA-case for the radio, if needed. Alphanumeric memories are nice too.

Actually, in most places in the world GI's don't need a SW radio to listen to news and programming from back home, thanks to the fact that AFRTS has AM, FM and TV outlets in anyplace they have a presence. I'm sure that if we are in Afghanistan for any length of time, there will be at least an FM station set up with a satellite feed from AFN in the states. Here in Korea, we have an AFN TV transmitter in every city of over 500,000 that covers most of the populated area... I would guess the main AFN TV transmitter in Seoul, plus perhaps 8 others, and an AM and FM outlet in each of these localities as well.

The problem with that is simply that the programming is
edited/filtered to what the regional agencies think is appropriate. A
SW receiver allows the listener to get stuff from around the world.

3547. IC-207H audio question???

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-20 22:46:32 UTC
From: Bob <bobh@elinkusa.com>
Message-ID: <cluq7.3399$3d2.289365@bgtnsc06-news.ops.worldnet.att.net>
Source record: 54348

I recently bought a new Icom IC-207H dual-band radio at a hamfest and have been wondering if the audio on AM is working properly. The audio on FM sounds fine, but on the AM aircraft frequencies, even a strong signal produces only about a third of the audio of a comparable FM signal. I have to turn the volume up almost all the way to hear the AM audio. I've had other Icom products which didn't act like this. Anyone experiencing the same thing, or have better AM audio than I do? Thanks, Bob - K8GNZ.

Hey Bob,

I've owned three of them and they're all like that. I currently own two
of them. Audio is definately quieter on AM than FM. I seem to recall that
was one of the things people didn't like about the radio. I don't listen to
AM on it anyway, so it doesn't bother me.

I don't recall ever changing the volume level simply because I'd switched to listening to airplane-talk... I do know that the only sign of a weaker signal, often times, would be the difference in volume, tho... Usually very little of the usual static associated with such on the lower frequencies...

I'll second that opinion. A-FaRTS is a real joke.

I worked in SITE-TV shops when in the Navy during the 80's,
running the ship's entertainment and instructional TV and
audio systems. News coverage was a real joke. The Army
and Air Force got the same tapes as we did...

Hmmm... I think a real ironic sign of the end of the
Cold War might be to set up a Non-Profit to purchase
cheap COBY's and distribute them to the Armed Forces.

Curtis made several variants of the 8044 Morse Keyer IC. The 8044 with letter suffixes are iambic, but I don't believe the basic 8044 was. I use the 8044B in my keyer.

MFJ (http://www.mfjenterprises.com/products.php?catid=7) bought the rights to the Curtis (http://www.curtiselectro.homestead.com/Curtis8044Chip.html) chip several years ago. They may be able to help you ID the version of the chip and perhaps send you a spec sheet.

3558. Mounting Hi Pwr 2m Rig Near Airbag Control? ('98 Honda Civic)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-21 02:45:13 UTC
From: mlinden@enteract.com
Message-ID: <9oe9jp$eq8$1@bob.news.rcn.net>
Source record: 54359

I've found what looks like a nice spot to mount my IC-2100H 2m rig in my 1998 Honda Civic. However, I've determined that, if mounted here, my 55w 2m rig would be merely inches from the Civic's SRS (airbag) control system. I'm a bit concerned that high power operation of a rig mounted in such a location might cause inadvertent deployment of the airbags.

Have any of you had experience in this area?

Thanks, Michael N9BDF, N9BDF@arrl.net

Horseshit. Even in the days when courts would condemn a juvenile
delinquent to military service, that wasn't the mindset. Those who
volunteered would have liked to be home watching the TV too. When it
comes to being shot at, there were no polls taken as to who wanted to be
there.
Stop your 'realistic' teenage diatribe.

So just how do you define being drafted, if not forced-fighting, sir?...
I don't recall it exactly being a voluntary thing...
And if you'll notice, I did say that I *didn't* agree with what I said.. It
was pretty much a "devils' advocate" post, iow...

If you mean has anyone ever blown one off with a two meter rig, I don't know but it sounds scary!

I haven't heard of it, but I know that many RFI problems can arise with poor shielding of the coax or from loose antenna connectors.
The loose connector sounds like the worst case scenario.

I run HF in an Astro van without any trouble, but how do you really know if the bag works until it blows? If you ask Honda, they
will probably ask their lawyers for a reasonable answer [:\

Hello,

Looking for something new with good power out put, 2/440 maybe 220 extended receive, and maybe cross band repeater.

Any suggestions

Ed

For the first 6 days following the attacks in NYC and DC, all AFN Korea carried was news from Fox News, ABC, CBS, NBC, MSNBC.. the only thing had that was of AFN origination were the crawl lines announcing the FP levels. I agree that AFN's own new IS a joke.. highly filtered and definately lacking.

From: Brenda Ann <brandad@kornet.net>
Message-ID: <9of564ecc1@hiline.shinbiro.com>
Source record: 54372

I have for sale the following radios:

Icom IC-02AT with good battery pack and charger $70
Icom IC-M11 marine band HT, pack has some dead cells $40 (SOLD)
Alinco DR-M06 6m mobile w/EMS-11 tone mic $150
Realistic HTX-10 10m all-mode mobile $80 (SOLD)
Kenwood TM-2530A 2m mobile $60 (SOLD)

Also I have a Power River 13.8 volt 12 Amp regulated power supply with
switchable 120/220 volt input voltage. $60

Or will do partial trade plus cash for a good basic HF rig, preferably with
GC receive.. I'm looking for an HF rig for a friend as a gift. :)

I would like to add my 2 cents to this 'discussion' --

eBay stores are NOT auctions - they are fixed-price and therefore
the use of FS instead of FA is accurate. However, the store format
does display all items the seller is offering, both the fixed-price items
and the auction items. You can always tell the difference because
the auction items have a date shown in the 'Auction Only' column. <Grin>

Perhaps if one would just look at the subject being 'discussed' before
expounding on it, one could save themselves from being embarrassed
by displaying their lack of knowledge.

Electrically, how would this happen?

Are there any warnings of this in your owner's manual?

Never heard of this happening.

I believe there are sensors that sense a collision, and set off the airbags. I'm
not sure how rf would do the same.

And even if it is set off, the bag collapses in milli-seconds.

If you had been reading the msg and paying attention, you would have
noticed the following.

>"If interested, please check out the following eBay STORE (not auction) listing:"

This is an auction, NOT the Store...
>http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1638921967

What he should have left was the STORE URL.
http://www.ebaystores.com/id=1927549

Obveiously this was a thinly veiled attempt to SPAM the group
with the CRAP on the auction page. as that was the URL the
SPAMMER left.

Now, SFB, read and understand the complete post before
making an ass out of your self..

That's BULLSH*T. All of the sellers auction are shown
at the store and the current price AND a link to the page
where the auction is being conducted.

Perhaps you should practice what you preach, See Quote below..

>"Perhaps if one would just look at the subject being 'discussed' before

3578. FT-847 Mic Question

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-21 15:36:57 UTC
From: Dan <nx9c@netscape.net>
Message-ID: <3BAB5E99.5050107@netscape.net>
Source record: 54300

Hello,

I have an FT-847 and am using the desk mic MD-100a8x at our school club station. I seem to recall some postings awhile back about the mic. I get terrible audio reports. I have sent the mic back and received a new one and I am still getting the same audio reports. The had mic works much better! I think it has to do with the settings but can't remember from the postings (about a year ago or so). Can someone remind me about the fix for this? I tried putting the mic on "thru" and it still gets awful audio reports.

Thanks,

Dan

Ok! so you are this guy's second banana shooting
flames around his adds for the very same items
FS and FA. Could it be that the FA is so stagnant
that you need to help him out? Perhaps I should
charge an advertising fee for the number of posts
where I include his url?

You SAMFCWSBP

: What he should have left was the STORE URL.
: http://www.ebaystores.com/id=1927549
:
: Obveiously this was a thinly veiled attempt to SPAM the group
: with the CRAP on the auction page. as that was the URL the
: SPAMMER left.
:
: Now, SFB, read and understand the complete post before
: making an ass out of your self..

3580. Re: Confused on first radio selection

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-21 16:08:37 UTC
From: Eddie Haskell <Wiseguy@Cleaver.com>
Message-ID: <9CJq7.33975$Ed3.7492341@typhoon.we.rr.com>
Source record: 54380
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

I agree with Dave on his opinion of the TMG-707A radio by Kenwood. I have had one for a few years also. The MAJOR differance between the '707A and the others (like Alinco) is the 707's receiver is GREAT. The 707 works fine in the high RF areas like Los Angeles and Las Vegas. The Alinco series of radios leave a lot to be desired in the receiver front end department. While they might be just want the doctor ordered in Tulsa Oklahoma, they roll over and die,gurgle and fart in high RF areas. The 707A is very easy to program with a laptop and their cable/software. Display is easy to read while mobile and has plenty of audio.
For god's sake DO NOT and I mean NEVER ever consider the Yaesu FT-90R!!! I had two of those peices of shit. The first one was destroyed by fire. I mean fire! I damn near had a vehicle fire thanks to this god damn rig.Yaesu admitted the radio had a problem and promptly replaced it. The second one lasted 3 weeks before it went dead. I replaced the crappy FT-90R with the Kenwood TMG-707A and glad I did. The Yaesu had a crummy receiver,piss-poor squelch and obvious heat problems. I finally fixed the second FT-90R (dead regulator) and sold it for $200 to a guy, told him the entire story and he still wanted to buy it. While Yaesu's service center in Cerritos is a top notch place and the staff will bend over backwards to help you, who wants to have a reserved seat at the service center? I will stick to my Kenwood and Icom Mobiles.....Kirk

Of course soldiers have nothing better to do than break dance
all day and get down with Tupac and the funky thumps from
their $1000, 100watt boom boxes... and yes I have seen radios
confiscated.

But then there are those whose sole function is to guard cleaning
supplies and swap answer sheets out of RTMs.

Source record: 54382

I learned today that the freebander who identified himself as "Unit 2711" in Florida had his website removed from the Lycos servers recently. This website, referenced at least once in posts to this newsgroup, openly promoted and encouraged illegal operation outside of the Citizen's band and inside the ham bands. If you see any more of this garbage on a Lycos-based website, please report it to:

http://reportabuse.lycos.com

Be sure to point out to the ISP that by hosting such websites they are seen to be endorsing the illegal activities described on the pages.

When you see this type of thing again - please take the time to do something about it!

Also you need to turn the display on its side if you're wearing
polarized sunglasses. Why Kenwood picked a non-standard polarization
is beyond me! I just sold mine.

3585. IC-746 VHF SWR Adjustment?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-21 18:14:32 UTC
From: Michael Blake <m.b.blake@worldnet.att.net>
Message-ID: <csLq7.3611$WW.331955@bgtnsc05-news.ops.worldnet.att.net>
Source record: 54387

Does a software adjustment exist to adjust the SWR sensitivity on the VHF port of the IC-746? When the 2M antenna port is connected to a 50 ohm dummy load the swr display reads 1:1 but when a 75 ohm load is connected it reads 2:1 rather than 1.5:1 as it should.

The output power is being lowered much sooner than desired because of this erroneous reading and I cannot find any trim pot adjustments be examining the schematics. Hopefully a software sensitivity adjustment exists.

I do not want to adjust the power/ALC adjustments to mask the problem.

I don't think it could go off without an impact. Don't take this as gospel, but I think there is a switch that must ride forward in order to give power to the bag. I'm thinking of a spring loaded thing..When you hit something, the "ball" or whatever moves foward against the spring pressure, and the "ball" enables the electrical connection as it rides over the contacts. This may differ from car to car. Anyway, I'd still look into it, but no, in general I don't think it can go off on it's own. MK

If you look under this newsgroup for a post called FS shack cleaning update
you will see an ICOM IC02AT with good battery and charger for $70.00. This
is a very solid radio and has been for many years. It is older but I would
recommend it over today's Radio Shack models and the cost is much better for
a first rig if you are on a fixed budget. It also has the ability to run
off direct DC something that helps save the battery life.

3591. SMC 2520 at Leicester show - is it a waste of money?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-21 20:40:25 UTC
From: David Hawkins <d.j.hawkins@btinternet.com>
Message-ID: <9og8iv$2hb$1@plutonium.btinternet.com>
Source record: 54393

I picked up a SMC 2520 tranceiver at the Leicester show today for £7.50 plus a band 3 controller board for £2.50. I thought that it was probably a waste of money but I hoped that I may be able to find out some information about it on the net - so far no joy.

It has 27C256 eprom on the controller board which I presume would have to be blown with specific software to allow 2m conversion. Has anyone done it?

Also there are a great deal of connectors from the controller board to be pluged into the main board and no obvious indication of which go where.

Any help would be appreciated.

Thanks,

David Hawkins (G7IBO)

3592. FS: 220 MHz module for FT-736

Newsgroup: rec.radio.amateur.equipment

Recently acquired the 736 and will never use the 220 module that came with
it. So, if you need one, here's your chance. I'll ship it to you for
$209. Please email me if interested. Thanks.

Source record: 54396

I had the FT-101ZD years ago, actually it was my first HF radio and I found it to be very good. I did a lot of DXing with it and it compared well with the TS-830.
It is tube finals so you have to tune it up, which was not a problem. Had a nice receiver and it had good power out.
I dont think I would pay more than $400 for one now, or maybe $350.
AC only (Im pretty sure it didnt have a DC adaper). And if your going to do a lot of serious DXing with it, you would need a seperate VFO for it since it didnt do split.
You might want to look on e-bay and see if they're are any and what are the bid prices.
But I did like the radio, I cant remember any problems or quirks of that radio.

Is it actually possible to tune those things for all the bands they're supposed to 'support' without going out and moving the rods every time you change bands?... ;)

I got mine used, so it's possible there were instructions concerning that part (besides what little there was in the put-it-together directions) included with it originally, I guess... anyway.. It works so-so for single-band use, but I've had better luck with a short-wire antenna in my small city-lot so far..
Would an antenna-tuner help much when the swr readings are "off the scale" for every band except the one that's been tuned?... Zzz....

I second that. The best two-meter HT I have owned was an IC-02AT; wich I had kept it. I was tempted to buy the one Gary mentioned, but I guess I can't really justify it.

Not a lot of bells and whistles, but rock-solid performance on the 2-meter amateur band, and very well built. My main 2-meter HT nowadays is a Radio Shack HTX-202, which comes close to the IC-02AT, but not quite as good. The AM rejection on the HTX-202 is not as good as that of the IC-02AT, for example.

Dan,

Go to http://www.en.com/users/rayd/ft-847/wwwboard/wwwboard.html and look in the excellent FAQ. There are some settings. However, others have had some problems with the standard mike cord not providing a good rf ground. I never had any particular problem, but did switch to an old round plug cord which I had around.

My 765 is a great rig and over the last year I have noticed a real high pitched sound(not a hum) coming from somewhere in the rig. It might do this when first turned on or it might do this after it been on for a few mins.Its not a loud noise but a sound that I wish I could pinpoint. It is very high pitched. It does not have any problem with its operating but I would just like to have this corrected before something might happened to the rig. At first I was thinking it might be in the internal power supply but then this sound is not have a hum. Anyway I thought I would ask any of you Icom 765 owners out there for your input and see what you might think. I know this is not much to go on but this is all I can say. Thats why I am hoping there might be another 765 owner out there that has come across this.

I've not run across this however, the power supply is a switcher so it might possibly emit a high frequency squeel rather than 60 Hz hum.

Hi all, hope someone can help. I just acquired an old marine DF or RDF portable receiver. Mine is a Raytheon "RAY DF-20," but is a typical Japanese made unit of 1970's vintage sold under the Ray Jefferson and other brand names. Can receive and DF on three bands from .16 to 3.8 MHz, also receives a couple of VHF marine and weather channels. Has a large, rotatable ferrite bar antenna on top (with compass rose) and ONE telescoping "sense" antenna. I put 4 "D" cells in and she is a pretty hot LF receiver. Outside and at night, I got every broadcast station from halfway across the US from my home near Philly. Even WWV at 2.5 MHz came in strong (on the ferrite bar antenna!) Everything seems to work just fine.

I can't figure out how to DF with the thing! You spin the ferrite (directional) antenna, and you get TWO "peaks" and TWO "nulls" on the S meter. I tune for null, press the "sense" button and a strong signal will once again show on the meter (presumably off of the "sense" telescopic whip.) This must somehow show which side of the directional antenna the station is located, but I cant for the life of me figure out how.

The radio has a rudimentary BFO, RF gain control, "TUNE" position (receives well) and X1, X2 switch positions (receives nothing.) I can send you a digital pic of the panel if it would help with your explanation.

My thanks in advance for the help!

If replying to my e-mail address, please remove the word "SPAMFREE" to get through.

Joe,

I can't remember exactly how that one works, had one years ago. From what I can recall I think you first find the null on the loop, then put it in the tune position, hold the df button and reduce the rf gain to get a mid scale reading on the meter. You then rotate the loop slightly to either side of the null that you had. If the signal increases slightly when rotated clockwise you have the true direction null. If the signal decreases when rotating clockwise you have the 180 degree null. I may have the null rotation directions backwards, can't remember. Try it on some stations that you know the direction of.

Joseph

When the signal nuls, the ferite rod is pointing at the transmitter, but of course you dont know if its forewards or backwards.

Then turn the radio 90 degrees from nul to where the signal is a max.

You now have two maxima.

Now switch in the sense. One of the maxima will be stronger than the other. That gives you the forewards or backwards.

In effect the sense aerial plus the rod aerial produce a sort of cardiod pattern, like a simple vhf beam.

The nuls with the sense off are much more accurate,than the cardioid with the sense on. So you find the nuls first and the use the sense to tell which way.

Graham

Posted by G3PHO on behalf of G3YBA:

FOR SALE: Kenwood TS680S all mode, HF transceiver.

160m to 6 metres (same as TS140s but with 50MHz).
Dual VFO. 100+ watts output.
In immaculate, pristine and little used condition (I can vouch for
that! .. G3PHO). One owner, non smoker.

Includes mobile mounting bracket, MC43S ptt fist mic.
Full service manual.
Note... there is NO mains PSU included. The rig needs 13.8V @ 25A.

Price: 350 UK Pounds. Buyer collects or arranges collection.
The equipment is presently located in North Somerset, England.

Please email Ernest Cooper, G3YBA at: g3yba@waitrose.com
or telephone him on 0`934 641198 any evening between 6pm and 9pm.
Please do not contact G3PHO!

3624. Maha-Rexon parts for RL-501 HT?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-22 19:20:50 UTC
From: Ray <orchardbait@home.com>
Message-ID: <mw5r7.27062$QK.22190933@news1.sttln1.wa.home.com>
Source record: 54327

I have a Maha-Rexon RL-501 dual band HT with a bad LCD readout. It had missing segments making it impossible to interpret. When I opened it up a corner was chipped off, maybe from a drop or from someone "screwdrivering on it". Anyone know where to go for parts? I've had no luck with Maha at all, nor the phone numbers they referred me to.
Thanks,
Ray KV4K/7

3626. Re: question for Icom 765 owners

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-22 20:01:14 UTC
From: Gary Fiber <g.fiber@verizon.net>
Message-ID: <e66r7.1645$R96.292723@paloalto-snr1.gtei.net>
Source record: 54329

Brenda Ann is correct, probably the DC to DC display supply is causing it.
Open the top case and look at the display board. This supply is about a 2 by
2 inch silver can. Icom treats it as a big IC. If you open the top of the
can you will see discreate parts but there is no field service schematic nor
parts for it.

Funny how just 5 months away from Icom can make me forget part numbers, I
want to say it is a DP-6
That supply is about $ 60 to $ 80.00 dollars. It solders into place with
about 5 or 6 connection points. Likely the step up transformer inside has
some loose laminations.

> should just take the plunge?

I don't think you can go wrong with the 706MKIIG. I use one mobile all the time. I use a FT-847 with the add-in crystal filters for my base rig. What's nice with the Icom is it is a rig that can grow as you move up to a higher license class. All you need is the antennas. As a Tech, I'm assuming that, the rig will even let you do 6m DX on sideband. None of the other rigs can do that. There are also stations on 2m and 70cm sideband as well. I even managed to make a contact or two on UO-14, an amateur FM satellite, mobile.

The down side to the rig is it needs more memories, 99 is not enough IMHO. The noise blanker does not work as well as some other rigs.
The rig suffers from a bit of intermod in a high RF field environment.

As far as a lack of built-in one-way cross banding ability is concerned there is a way to fix that with an el-cheapo scanner or HT. Just use the rig's built-in VOX ability, and stick the mic over the speaker of the HT or scanner. Just make sure you have the squelch set right. Set the HT or scanner to your TX frequency. When the squelch breaks the 706's VOX will automaticaly kick it in to TX on the band and mode of your choice. Simple and no wire mods needed. If you have another rig with VOX you can cross couple the mics and speakers. Then you can do full duplex cross band repeat, with cross mode ability too!

I have for sale a mint Diamond SX-200 SWR/Power Meter. This is an illuminated meter which displays average and PEP. This meter covers 1.8-200 MHz and has a power rating of 200 watts. I am the original owner and have the box, manual and power cord.
I am asking $75.00 plus shipping from 48026.

3633. Wanted: Laptop

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-22 22:58:03 UTC
From: kd4e@arrl.net
Message-ID: <161b5910.0109221458.1a265152@posting.google.com>
Source record: 54336

I need a laptop on which I can run Linux (There are lists on the Net I can
reference as to which are hardware compatible.).

It needs to be at least a 166mhz, preferably 266. Cosmetics are not critical, reliable working condition is -- this is for use in emergency
communications.

Laptop needs to have both cd-rom and fdd built in (no swapping into a shared dock), 3 gig HDD min, battery in strong condition, usb, pcmcia, serial & parallel ports, prefer 13+ inch tft display but will consider others.

I have no cash, just swappin' stuff:

AMD 450mmx cpu in ATX box with Tekram motherboard. 56k modem, 52x cd-rom, 3g hdd, onboard sound, keyboard, mouse, ADI ProVista 3 monitor, Win98 & Win98
Plus CDs, Norton Utility Bundle (Nu 3.0, NAV 4.0, UnDel 1.0 with manuals, etc.), DOS for Dummies, a pair of Intel network cards, and a 600w UPS.

I'd prefer a swap here in central Florida but will work a swap in the continental US where we each pay our own shipping -- but I will not ship
the monitor or the UPS (too heavy to be worth it -- I'll substitute Stormix Linux in the original box, and an original Win95 CD w/certificate).

Swap Sweeteners:

Depending on the laptop and location, I also have available ... Two 70 foot heavy duty push-up poles, Daiwa 2.5kw antenna tuner w/meters, a second 600w UPS, some misc. small X-10 accessories (no cameras).

Thanks! & 73, Doc KD4E

Gents, thanks for your replies....MUCH appreciated. Here's what I found, using an amalgam of your suggestions.....:

I tuned a strong station of known direction in which the SENSE button gave a appreciable RISE in signal strenth on one of the NULLS.

ONE NULL produces a RISE in signal in one direction and a DIP in the other direction (as ferrite antenna is moved slightly.) The DIP is the direction of the station. Turn ferrite antenna to THAT NULL (is quite precise,) and read the bearing to the station (as compass rose is oriented to magnetic heading.)

I am going to get out my compass and try to triangulate my position (from the back yard) off of two or three stations. If I can do this sucessfully, perhaps this receiver may have a place aboard the sailboat as something more than a toy.

I'll tell you, this thing is indeed a HOT LF receiver. I can pick up and identify a aviation NDB at 220 kHz thats more that 50 NM from my house, from INSIDE! I believe that these are fairly low power stations.

THANKS AGAIN!

3646. What RF voltage OK at Rx in SO2R?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-23 14:53:34 UTC
From: jflanders2@home.com
Message-ID: <3badf5ac.754583444@NEWS>
Source record: 54200

I am trying to set up for RTTY SO2R and have two questions:

1. What voltage levels can solid state rigs safely tolerate from nearby tx?

2. I read about guys using stubs as well as filters in SO2R. How much of this is just to protect the rx hardware, and how much is there to improve normal rx on band A while tx on band B is underway?

I would like to avoid smoke testing the rx front ends on my FT-1000D and IC-756PRO if possible. I intend to measure actual voltage present on my (well separated) rx antennas while transmitting and determine from that if I actually need protection, and to what degree. This is aside from the question of rx overload, which I can see for myself once I get it all in actual operation. My immediate goal is to see if I can safely tx w/o smoke before I start working with stubs or filters.

Greetings,

I'll be going to Farfest in Bowie MD next week. Maybe I'll see you there! I've been a general class for about a year. Rig is FT-980 barefoot thru homebrewed dipoles. I'm considering the following equipment and would like the ng;'s comments to help me make smartest decsiions.

1. Amplifiers -- What should I look for and how much to pay. Ameritron offers a new amp., 120V AC plugin, 600W SSB MAX. They want about 650 for it. Question is; what could I possibly find for same or less? How to judge quality, reliability? And how much to expect for a full gallon?

2. PS -- As above; how to spot inspect. Also, my rig runs fine on AC. is there any advantage to using DC on it?

3.Analyzers -Like the MFJ 259B or 269. I'd like something like this, but what are the other options? I really need some analysis tools. All I've got is AN/PRM-10 with no manual - does seem to work after I cleaned it and re-wired power cord.

4. O-scopes -- Do I need one? No. But I love these things and want one. How much to expect to pay for O-scope with probes, manual, and freq. range to cover Ham ?? Brands??

A lot to ask I know. Be sure that no matter how involved or lengthy your reply you will never run out of my interest. <grin> Please accept my thx. in advance.

Can anybody explain the operation of the internal antenna tuner! The book
is unclear (at least to me,!!)
on the difference between the automatic and manual tuning function. I have
tried pushing the
"tuner" button, and pushing and holding the button and the tuner does not
seem to
want to tune my Hy-gain vertical.

I can get it to tune through my MFJ-948 tuner but would love to use the
internal tuner
if possible.

Thanks for any feedback offered!!!

Rick

Hi Rick I do not use any icom antenna tuners however most internal tuners require the antenna to be 3 to 1 or less before they will function properly. Your out board tuner has more selections of inductance and capacitance and will tune allow the radio to think that you have a good swr. It is the tuner fooling the radio.. With the internal tuner de to space limits they use torids and motorized capacitors. They dont have tis range of tuning.

I would check your vertical with a antenna annalizer and try o get it close on swr or at least resonate in the band. The tuner then can correct fot the impeadence and the input of the feedpoint where most mismatches occure and adjust for mismach thus only the antenna is resonate and the swr will tune quickly, An Antenna that is not resonate and with an inpeadence mismatch is a very hard anenna to tune with an outboard tuner let the internal tuner. Hope this helps and that I did not confuse you.

73's and good luck Randy WD8EJC

3655. Testing tubes - need advice.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-23 17:50:44 UTC
From: David Pinto <dpinto@bu.edu>
Message-ID: <9ol7dkgbe1@news3.bu.edu>

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I'm a relative newcomer to tube radios but I'm having a great time restoring an old Blaupunkt Verona 2600 recovered from my Uncle's attic!!!

I picked up a box of ~300+ vacuum tubes at an auction a few weeks ago. I was hoping a few might match what I need for the restoration job, but sadly none of them do.

I figured someone could use the tubes anyway so - as part of my continuing education - I also picked up an old tube tester at a flea market - Knight Model 600A.

So here's my question .....

Checking the tubes in the box, I'm finding that about 1/2 of them so far are just bad. Not unexpected. The rest are giving fairly good results on the emissions test. A pleasant surprise.

But ALL of them, so far, are failing the short line test on one channel or another. However, most are failing on the same pin - which makes me suspect the tube tester more than the tubes. I've checked a few of the tubes by hand using a multimeter and detect no incorrect continuities between the pins.

Reading about tube restoration online, I've read a number of times that shorts between pins is a far less commmon way for tubes to fail than a loss of emmissions. But I've also read that checking with a multimeter when the tubes aren't hot, can lead to lots of false positives. Then again, it could be that the whole box was the garbage bin of shorted tubes from someones shop.

So what gives?

Should I believe the tube tester? Should I believe the voltmeter? Is there a way to fix a tube with a short but is otherwise functional? I guess there's no way to get inside the glass to seperate leads without losing the vacuum.

Again checking online, it seems some of the tubes I've got are somewhat rare and might be of use to someone else. So is it worth continuing on to try to save some of them? If there's a chance that SOME of them could be saved, I was toying with the idea of building a transconductance tester and going a little deeper with the project. But If I'm going to nothing but grief in the end, then I may punt and just go back to just fixing the radio.

Of course, if anyone would like to take some of them off my hands in exchange for the 6 tubes (or substitutes) I need for the Verona (ECC85,ECH81,EF89,EABC80,EM84,EL84), I'd consider that as well.

Thanks!
David

David,

In my experience, the tubes are not the first to suspect if something is wrong with a tube radio. It is more often the capacitors, especially coupling capacitors of the paper type that leak and cause a high voltage on the next tube's grid etc.

I restored a 1939 Blaupunkt and did not have to change any tubes except to replace the two that were missing (see my web page below.) From the list of tubes I can see that your Blaupunkt is much younger, probably from the 50's. Of these tubes, perhaps the magic eye ("troll's eye" as we call it in Norwegian), EM34, may be weak due to fading fluorescence, but the others I would expect to be OK.

Sverre Holm,
Oslo, Norway

Source record: 54210

If I were going for an amp and already had 100 watts or more out I would not look for any amp that does not have atleast 1000 watts input. It would also not use the 811A tubes but would have either the 572B tubes or the bigger ones. The 811a tubes are really pushing it to get to 1 K with 4 tubes in the amp and have almost no headroom for people that are slow to tune up the amp.

If the rig you have works off AC , there is no reason to hook it to a DC supply. For the ham market the Astron supply (not the switching one either) is the best to get. No fans on it. Get atleast the 35 amp modle. While you may not use but 20 amps or so, it will let you add other things as you build up your station. Many of the vhf/uhf transceiver are made for mobile use and do not have built in AC supplies.

Unless you are desigining antennas or really know how to use and apply the info the antenna analizers provide, you will be much beter off with a simple SWR meter or directional wattmeter.

Source record: 54216

The "auto" tuner in nearly all late rigs, are not designed, nor are there capable of tuning "any" mis-match. Even then they are very lossy at best. There are designed to cover any SWR from 1.5-3.0 : 1, and not much more. Typically there is a 10% loss in RF power out when they are used, even with a small SWR present.
Don't expect the "auto" tuner to do "everything", it will give you a means of covering a larger section of a given band on a "resonate" antenna for that band. Also a means of protecting the final PA section from improper loads.
Simple solution; if the auto-tuner is having difficaulty, don't use it. Fix your antenna.

They may be showing short because you are not testing them correctly. I am not familiar with the Knight tester but on some testers you have to push a button or disconnect a pin by the switches for a short test. Some tubes such as a 12at7 have cenertapped filiments and that could be where you are seeing a short. Also lightly hit the tube whild doing the short test to see if there is anything loose in it. If possiable try one of the tubes in a working radio or try a known good tube in the tester.

One trick to see how good a used tube is is to reduce the filiment voltage one step while doing the emission test and see how fast the meter falls off. The slower the beter.

Heathkit SB200 linear amplifier in very good condition, clean, looks almost new. Working. Covers 80-10 meters pre warc bands. Will be only sold to a licensed amateur, (call sign and verifiable address required). $365.00USD. Unmodified. CW 1KW plate input, 1200 watts ssb. Comes with original manual. Purchaser to pay $20.00 for foam in place packing, and shipping costs (at own risk). Pictures available - just ask.

Do you have access to a Drake R4-B Receiver manual ?

I need the formula to determine the crystal frequency for the
auxiliary receive segment crystals. I bought an R4-B w/o manual, and
I would like to add xtals for 30, 17, & 12 meters.

ALL help is appreciated.

When replying please remove NOSPAM from:

Jery,

It is very commmon for those who work 160 meters to use a seperate receiving antenna. Many of those users have smoked the receiver front end when transmitting. Icom never specified the actual maximum voltage input on any of their radios, but remember they are sensitive into the microvolt range. We could not damage one of them using a IFR 1200 Super S service monitor at full generating capacity. But I sure would not want to hit one with 100 milliwatts either. You might consider removing the receiving antenna when transmitting,

Yep, sensors and switches, etc work as advertised. But, the real concern is current induced into the system from stray 'trons bouncin' around (orry for the oversimplification:). I dunno how the whole system works but if the manufacturer hesitates to answer you have to consider the consequences if misinformed. The problem with the deploying airbag is that it's literally a bomb with a bag attached. I believe it's designed to work in a crash at speeds up to and beyond fifty miles per hour. Safety item or not, that ain't a rock video:) Choose wisely...

Hi Howard,
Interesting. I'd have to ask where/what your neighbor does but of course I won't since this isn't the place to go into personal particulars. I wouldn't insist that it could never happen and believe those who say it has in the past. But, think of it: what good's AFRTS if you can't have a radio? "Damnit! I can't have my men listening to the news and Tupac and the Funky Thumps!" [Sorry, just had to do it:) though I've never heard Tupac on SW] We can believe the young Capt. Some might have some kind of funky restriction like that to accomodate the possibility of being prepositioned in a country that has a law against owning a radio but political correctness like that will fall along the wayside as soon the shooting starts and the hootch opens for business...

Source record: 54227
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

This is an exceptionally nice Ameritron AL-80B amplifier. Covers 160 through 10 meters with 1KW PEP on SSB from a rugged 3-500Z tube.

This amplifier is tailored for the CW or digital mode enthusiast -- it has the Ameritron QSK-5PC board installed, which enables full break-in CW capabilities and lightning fast T/R switching (this add-on is $250 from Ameritron).

Wired for 240VAC but can be used on 120VAC with a simple change. Cosmetically excellent - a couple very minor scratches but otherwise perfect. Non-smoker, very clean interior.

Includes an RF Parts 3-500ZG tube as well as the original Eimac 3-500Z tube (both will be shipped separately from the amplifier.) Amp will be shipped in original boxes and includes manual.

$775 -- INCLUDING UPS ground shipping/insurance in lower 48 states.

E-mail if interested, nw0l@arrl.net

Hi Gang,
Just picked up a Yaesu FT-530 dual band HT this weekend. Of course
it did not come with the book, and I haven't been able to figure
out how to save configurations (freq, rpt offset, tone, etc).
The "save" key doesn't do what I think it should (save the
settings).

If there is someone out there that knows the trick, I'd sure like
to hear from you!

Could also use a copy of the manual.

Thanks!
Steve W6SSP

Having the airbag go off would be an absolute disaster! I have never heard of it happening, but I have heard of RF causing the rear windshield wiper on one car to start running, engine computers to malfunction, horns and anti-theft alarms to go off, and ABS brake systems to act wacky. Anything is possible.

I would certainly use the best quality, foil-shielded coax with expertly-installed connectors, and run it as far from the air-bag as possible, and mount the antenna on the back of the vehicle. An extra shield around both the coax the DC power cable, as well as a good chassis ground for the transceiver would make me feel a lot better if it were my car! I would also test the system extensively with the car parked, engine on, and me *outside* the car, keying the mic. I would keep the windows open during the test...if the airbag fires, glass could blow out everywhere!

Xtal freq - 11.1 = band. And that will be the bottom end. Say for 40m, you use 7.0 + 11.1 = 18.1 for the xtal. You can verify this by looking at your existing xtals. So for 30m, 10.0 = 11.1 = 21.1 for the xtal. etc.. Also you can get more than one band per xtal if you vary the bandswitch and or preselector settings. I'm trying to remember, but I think one formula for the second set is xtal freq-11.1 + xtal freq. So a 18.1 40m xtal could also get {18.1 - 7.0 + 18.1 = 15.1 mhz. I think thats right anyway... I haven't been using my drakes in a good while. Also in some cases with strong xtals etc, you can get a third band about 185 kc or so below the xtal freq, but this doesn't always work. But the "2nd" set will always work, as long as you end up within the preselctor range of the radio. IE: over 30 mhz won't work, and much below 160 m won't work without the extra low freq converter. The preselect is too far out. With a hand full of xtals, I had about 70-75 % coverage of the whole HF spectrum. Also, beware of any possible IF problems. I don't have a manual handy, but some freq's are quirky. Such as around the 5-5.5 range I believe. Anyway, you already have 5 new bands for SWL use by reading this post..:) "using the existing ham band xtals" You can also get 5 mhz by setting to 80m, and preselect in the 6-7 range. 5 mhz will be at about 125 kc???? kc or so on the dial. Look for wwv while rocking the preselector. MK

> Do you have access to a Drake R4-B Receiver manual ?

oops...I thinked I goofed on my adding.. Actually, you won't get 5 new
ones cuz the high band xtals will push you over the limit of 30 mhz
for the second set of bands... The low band xtals should work though.
The 40 xtal at 7.0 + 18.1 would be 25.1 mhz , not 15.1 I must have
had a vapor lock..So the 20m xtal would push you over 30 mhz and not
work. MK

>
> So what gives?

Myself, I wouldn't chunk any tubes, just because a tester said they
were bad. Unless maybe they are obviously bad or gassy etc. The reason
is many times a tube that might not work in one type circuit, might
work fine in another. I think the best test is in the radio. Either it
works , or it doesn't. I've got two fairly good testers, and they are
handy for judging the appx life left in many tubes, but I've seen many
tubes that tested pretty flaky that still worked in the radios in
certain types of circuits. Many times I would have radios with say
multi 6UA6's or whatever, and I would swap them around to find the
best matches for the circuit. It can make a big difference. Say for a

receiver tube it would be more critical than say a vox tube or whatever..I'd always use the best ones for the critical circuits. MK

3688. Yaesu FT-817 and CW Filter

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-24 11:10:37 UTC
From: al <alw@enter.net>
Message-ID: <3baf14ae$1@rpc1284.daytonoh.ncr.com>
Source record: 54244

Just bought the CW filter for my 817. The filter only becomes active if I activate the SSB option in menu item 38. Activating the CW option gives me the normal bandpass of the 817.

Even though the filter is activated in SSB it does appear to be the CW filter, as it has a bandpass in the hundreds of cycles. To my ears, I could hear a cw sig for a total of 1Khz. Definetly not the 2.5 Khz needed for SSB. BTW the filter has the correct nomenclature for CW.

Any ideas why this is happening?

Thanks
Al W W3CE

Russ,

I have lines which appear when it is hot, and others when it is cold.
It is probably due to poor connections within the LCD unit, or
contacts to it. You might look there. This is a common problem. It
has been posted that Kenwood wants $200 for repair. Good luck.

I need a working audio board for my Icom IC-24AT. I don't know, but suspect that one from an IC-2SAT is likely the same board. I am willing to buy a junk radio to get this part, if someone has one that maybe has a bad processor or PA or whatever but a good audio board. I don't do well with SMT, or I would simply repair the board I have. TIA

Once you have programmed all required settings (frequency, offset, PL tone, etc) you touch and hold the "FM" button (lower right corner of keypad) until the number in the upper left corner of the particular band's display you are working with begins to blink....you'll see what I'm talking about when you try it, and use the channel select knob on top to select which channel you want to program then hit the "FM" key again to complete the memory operation.

Questions please email me direct at:

n6ax@pacbell.net

Thanks

Al,

In addition to activating the CW option (make sure you activate the CW option and not the SSB option) in menu item #38, you also need to put the rig in CW (or CW-R) mode, tap the F key, and rotate the SEL control to go to the "IPO ATT NAR" setting. Press the C function button and the rig should switch to the narrow filter for CW.

If this doesn't solve the problem, let me know.

The following URL links should get you to the same page

http://ww3.weatherbug.com/aws/default.asp
http://www.weatherbug.com

This is a link to a page where you can get a free download of a weather program which when loaded onto your computer gives you one click access to the local weather no matter where you are at in the US. You set it up for your area via the setup function and using your zip code. It gives you real-time weather data, warnings, and one click access to local, regional, and national weather radars. Also in many areas extensive links to other weather related sites.

No cost or obligation and I believe is sponsored by the National Weather Service. It's a nice download if you are interested.

3705. 10 meter antenna?

Newsgroup: rec.radio.amateur.equipment

What's a good 10 meter antenna to build/buy? Should I just go with the standard dipole design or are there other options that work a little bit better? I will be upgrading to general and would like to put something together for this band since I already have a radio that was donated to me.

A vertical is not an option since this will be for attic use.

Thanks!

Source record: 54263
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hi David,

I agree, with other comments posted, that the most reliable test for tubes is "in circuit" testing.

The problem with that method of testing, of course, is assurance that all the tubes used, are in fact, "good".

The "run of the mill" tube "checkers" test "cathode emmision" rather than transconductance (mhos), inter-electrode leakage AND grid current leakage.

The only KIT type tube "tester" with all three types of testing (transconductance (mhos), inter-electrode leakage and grid current leakage), to my knowledge, was the Healthkit Model TT1/A.

There a number of similar testers that were manufacturered. Their names/model numbers escape me however. (One of the many signs of my age!)

If you choose the "in circuit method",I would suggest you purchase a "Howard Sam's" tube cross-reference/substitution guide (small paper backed booklet). Many of the varieties of European "Valves" have more commonly used "TUBE" type numbers on this side of the pond.

All your questions are welcome.

Some of this info you may also find on the net, e.g. on
http://www.duncanamps.co.uk/cgi-bin/tdsl3.exe/
You will find that for instance the EM84 = G6, ECH81 = 6AJ8 ...
Just typing the tube type in www.google.com or another search engine often
also brings up the equivalent.

HI All,

Looking for opinions for or against regarding the JPS/Timewave ANC-4
Noise Canceller.
Being on HF for less than a couple of years, I never knew this device
existed. I've read the ARRL review and it sounds promising. Of course,
that's in the lab under a controlled environment. I'd love to hear from
folks with real-world use. Anybody?

Thanks,

Dan

Hi Frizz, I'm sure you'll get a ton of replies telling you to get this antenna
or that antenna for the great gain it has, or what a narrow beam width etc.
Bottom line is if you want to talk to the guy 35 miles away you might need a
gain
antenna and/or a antenna up high in the air. If you want to talk to the world
on 10
meters the band has to be open. If the band is open you can work the world with

a 12 watt rig and a mag mounted cut down cb antenna mobile on your car. A
dipole at anything above 20ft (higher the better) or in your attic will give
you good results on 10m. You said you were upgrading to general...I wish you
well and hope you get on some of the other HF bands also.

3716. How to add 12, 70 & 30 m to old FT-901 DM?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-24 22:16:05 UTC
From: ai928@FreeNet.Carleton.CA
Message-ID: <9oobb5dcj1@freenet9.carleton.ca>
Source record: 54270

Hi.

I recently purchased an FT-901DM at a local hamfest. This is
the OLDER version WITHOUT the "WARC" bands (12, 17 and 30 M.)

[To see pictures of the FT-901 both old and new versions, see
the web page:

http://www.mods.dk/picture.php3?radio=yaesu&model=ft-901

and note, closely, the band switch just to the right and below
the VFO dial. My rig is the on in the top picture, not the one
in the bottom picture.]

I am wondering if anyone knows of an easy, simple method to add
the "WARC" bands to the older FT-901 DM model?

About the only thing I can find on the web that *MIGHT* be what
I am looking for is at:

http://www.mods.dk/mods.php3?radio=yaesu&model=ft-901&selectid=1902#1902

but this is not very enlightening. There is only a picture with
absolutely no accompanying text to explain what it is.

Has anyone had any experienc modifying this rig to add the
"WARC" bands to the older version?

Also, does anyone know where I could find a CW filter for this
rig?

BTW, what are the differences between the *newer* version of the
FT-901DM and the FT-902DM? Their pictures look identical,
except for the model name plate just to the left of and above
the VFO dial.

[See:

http://www.mods.dk/picture.php3?radio=yaesu&model=ft-902

for a picture of the FT-902DM and compare with the bottom
picture of the FT-901DM in the previous picture reference.]

No comment on "WeatherBug" (I use the GNOME Weather applet; I don't "do"
Windows).

However, anything from "akamai.net" is most likely NOT originally from
Akamai. They are a CDN (Content Distribution Network), and distribute
content for lots of companies (like CNN, ESPN, Apple and many others).
They send server sets to ISPs that basically cache (not exactly, but
close enough) content so when you go to http://www.cnn.com/, most of it
comes from a server that is local to your ISP. This speeds up your
browsing and downloading, saves your ISP and CNN bandwidth and saves CNN
server load.

Akamai avoids spammers (they are run by some good Internet community
people), but I don't know about banner ad companies. Akamai is "good
people" on the Internet, making the 'Net work better for lots of people.

Source record: 54285

Frizz,

Are you making this yourself?? Kinda sounds like as
otherwise you could just walk into HRO and buy one off the
shelf. You can spend alot or a little time on antennas. There
is probably a point of overkill for you if you're not multi-banding,
climbing a tower to mount it, or hoping to contest, etc.,etc.

Why not try a dipole? 10 meters is approx. length of a
full wave -- therefore 2.5 meters would be 1/4 wavelength.
That's about 7' 4" or thereabouts. That should fit it even a tiny
townhse attic. Not sure how much you know, but a search on
Yahoo or such for "dipole" will give you hours or reading matter.
When I started on 10M I just used a random and it worked fine.
Now I'm pretty much sold on the idea that as long as I can't
afford towers or commercial antennas like Cushcraft,etc. I will
save my precious ham dollars for new toys and home-brew my
own antennas -- the dipole is a great choice for a homebrew.
Depending on your situation, horizontal loops might be another
option.

The point is this: If you're homebrewing and NOT into
building traps,etc. then basically your antennas will be coax,
insulators, and wire. All inexpensive and easy to put up, play
with and take down to play somemore with. Just remember
that simple materials does NOT mean you should duck the
math and/or testing involved; it will make a huge difference
it just how effective your antennas are. Don't let anyone
dis your system just because you don't have rotating beams
on 200ft. tower antenna farms. In some countries you could
be shot for what you're doing. So have fun and enjoy!
Andrew

Adaware doesn't flag Weatherbug, and I've never seen any ads from it
except when I open WB itself. And it has to go out to get the weather
info.

It is, but not that big. I have seen a Moonraker before and I don't think
it would fit up there and leave me room for my 2m vertical and other
antennas I want to put up there.

3739. coax power rating/swr charts?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-25 15:13:06 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <3bb09f00$0$1524$272ea4a1@news.execpc.com>
Source record: 54293

Are there any charts on the web to look at to determine max power ratings
for various coax depending on swr?
I have found some loss charts, but not power, in my books.

I primarily use RG-8 foam, 9913 and 9913F, RG-213 and RG-214. Also have a
lot of CATV half and 3/4" hard line.

As much as I like the T7H, fully charged batteries don't seem to last
very long weather you use the radio, or let it sit. I purchased the Maha
NiMH battery, they don't develop a memory like NiCads so you can charge
it up even after short usage.

Source record: 54149

I put the cable thru the driver's side. It was tough getting a start thru one of the grommets, but it can be done (although its a bit distorted, now). I could not find a good ingress point of the pass side. Maybe I didn't look hard enough?? At any rate, do it on a cool day. You're attitude will may remain more calm a bit longer.....hi.

Ty,

After a lot of head scratching in my '96 Accord, I punted and tied into the power to the power driver's seat wiring. If you don't have a power seat, the wiring may still be there. It is live even with the ignition off, and tests show it is clean power with big enough wires to handle the load. After 4 years I have never had a complaint of alternator or other noise.

I realize this is against conventional wisdom that you MUST go directly to the battery. All my mobile installations until this one have been done that way. However, the increase in the use of solid state components has forced manufacturers to clean up the automotive power distribution wiring.

Source record: 54155

I have never had a Drake TR7 but have had a Ten Tec Omni which was the predecessor to the Corsair. A few things I would like to mention. I do know that the finals that Ten Tec uses are great and one of the most durable finals I have ever seen for a solid state radio. The QSK fast break in is the best of any rig also for those at the time of their manufacture however one of the biggest advantages for the Ten Tec over the Drake is that Ten Tec is still in business and just a UPS truck away. The series Corsair has plug in cards and often if you are good at describing the trouble they will even ship you a card to plug in and try and you don't have to send the radio. The plant is in Sevierville, Tennessee, just outside Gatlinburg and up from Knoxville, Tennessee. I have been to the plant several times and know that they do a great job there.

Hope this helps

Don't know too much about your area but you can try on the web and look
under

www.switchboard.com list your city and the type of business you are
looking for and you will get a listing.

Another thought, if you don't mind mail order is a company called Newark or
Allied Electronics both are very good. You can find them on the web as
well. Good Luck

From: tek_guy@hotmail.com
Message-ID: <cbf4a67d.0109251537.6ab81215@posting.google.com>
Source record: 54166

Hello.

I've been looking around at the selection of VHF/UHF base rigs currently available; not much is around that's affordable. I don't really want to hunt for ages in hamfests or on Ebay, so I'd like a rig that's commercially available.

I've heard a lot about Icom's latest version of the '706...and it's in my budget (under $1000). I'd like to do some VHF/UHF work with it - as a satellite downlink receiver, long distance repeaters, etc. Does anyone have an opinion on this? Is the '706MKIIG good for what I want?

Any help appreciated.

Jim

I posted a smalla rticle about the radio but www.eham removed it ??

The radio will cost 1/2 between a fT-817 and a Ft-847 . The Ft-847 plus Ft-920 and ft-840 WILL BE DISCONTINUED . The radio Ft-897 has similar specs to the Ft-100. However, it is a larger radio designed for outdoor and small shack use..portable . There is no antenna tuner.
I am not sure if there is a built in power supply (switching either). If I find the link to the English site I will pass it on to the Whole Newsgroup. ..OH YES. The ICOM 746 radio is now discontinued and replaced by the Icom IC-7400. Basically, the radio looks exactly the same as the IC-746 but has the insides of the Icom 756 Pro MK II
..No optional crystal filters or crystal oven to install. It costs 20 K more yen.
tak care, Harika yamamoto

3764. Re: coax power rating/swr charts?

It depends on the frequency. At 2 meters and above the rg-8 size is not
rated for the legal limit. Rg-8 foam is rated 475 watts at 150 mhz.

A yeasu ft-847 would be better. With coupon, they're going for about $1250 now:
http://www.texastowers.com/ft847.htm

The 706 is a little more bare-bones for vhf/uhf.

The next Problem with MK2 is that the receiver is a terrible performer. When connected to big base antennas you will probably have all sorts of intermod problems if you live near a big city. The receiver scores about a 1 against a good base radio.

The next problem is that i hear many MK2's being driven with linears. Frankly the signals really stink and are splattery. This is not a surprise since the transmitter IMD of this box is poor likewise the phase noise performance. Just a pity QST dont change the way they make IMD measurements which show them 6db better than they really are.

With all bargains of old good HF and VHF/UHF you better seek out these. But learn how to read the specs and reviews from the ARRL you will learn a hell of lot more than most who seem to have owned every box on earth and seem to claim every new or latest toy is the greatest since sliced bread. Technology or improvement moves slower than a snail crawling in ham radio research. There aint much that is new or more better than the past.

THE SPECS TELL ALL

Hi Guys;
I have a few BA's that I cannot hold any longer, too big, too heavy & not enough time.
They are pick-up here on Long Island.
1- Johnson Viking Valiant(I) Untested, Extra Nice condition, Best I've seen anyway. Price is $300.
2- RCA RBB-1(?) Navy Receiver, Insides look NEW, No Supply, Built in 1940, Navy type CRV-46147, covers 500 kcs to 4mcs, Has cabinet, & part of the 4 rubber shock mounts. Front Panel is dusty but will be MINT!
Price is $300
3- E.H. SCOTT RCH Navy Receiver, Built in Supply, Original Cabinet with shouck mounts, Super nice, plays.
Price is $300
4- Hallicrafters SX-28, Plays, really clean, nice one guys $400.
5- Viking II, Factory Built, Working, Really nice, nedds a few screws in the Cab.
Price is $250, well worth it!
6- National NC-303 Receiver, The Cabinet if a BUD & very nice but not original. I think its better, plays, Price is $250.
7- NC-183 Receiver, Kind of scuffed up but complete & plays $150.
8- Hallicrafters SX-101A with the 160 mtr band, plays, needs tlc, $150.
All above may need some adjusting, etc. They been unused for years and Will NOT SHIP, Pick-up only.

Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

I don't here in Houston. And I'm 8 miles from the 2000 ft antenna
farm. The 706 is not the best vhf receiver I've seen , but it's
certainly usable. I've never had any real intermod problems here using
a 3 el yagi at 40 ft. But I agree a good base radio is going to be
better. Even a 2m only rig such as a FT-2500m is better as far as
intermod on FM. I have one and have compared. The 2500 won. But the
706 has not shown itself to have a problem even though it's slightly
inferior. The biggest problem with the 706 for him is it's not worth a
hoot for SAT work. No full duplex, etc, etc. The 847 or whatever would
be much better for SAT work. I don't know how I would compare the 706
to a big base VHF/UHF rig, but it wouldn't be a 1. Maybe a 5 or 6???

Again, We've never noticed this among the people I know that have run
706g's and amps. And there is a boatload of them. I've heard sorry
sounding 706's but they were overdriving the snot out them, and they
were usually an original 706 which had a different design final which
didn't like to be overdriven. If anything, I get the opposite reports
with the G. Very good audio reports in general. I've listened to a
friend of mine run his into a henry amp, and it sounded just fine.
Noticed no problems whatsover. And we did compare it against a TS-450.
The 450 is not the greatest, but it has pretty decent audio. I
actually prefered the 706. It had a crisper and clearer sound. But the
450 was limited with a 444 mike, which is not my favorite. I wonder
about cockpit error in the people you hear. Compressor on and over
cranked, underloaded amps? Dirty solid state amps? etc.
I wasn't crazy about the original 706's audio and transmitter quality,
but I haven't noticed this with the people running the mk2's or the
mk2g's. Or properly anyway. And I think the mk2g sounds slightly
better than the mk2. But that might be my imagination. If the radio
was anything near as bad as you say, I wouldn't be able to run it.
"I'm very picky about that" But I haven't had a single report of any
splatter, bad audio, etc. Not one. But I run conservative audio levels

also...Also I test people, and let them guess which rig I'm on. They never can really tell. The last time I did that, the guy thought I was on my 830. I use the same mike on both.

> THE SPECS TELL ALL

If they are correct anyway. It's all in what you want. You can't expect a mobile box the size of a 70's CB, that covers 160m-70cm to be the model of ultra performance anywhere. Or at least at this stage anyway. But it is ok as a jack of all trades, but master of none type deal.I've been running the dog doo out of a 706g for about 8 months, all modes and bands from 160m to 70cm, and CW to SSTV, and I just can't agree with the overly gloomy review you give it. But I'm not expecting it to be a contest rig either. It's a good small "everyday" use rig that covers all bands. Sure, you can get a dual band rig for half the price that probably has better performance, but it won't do HF or 6m. Or be able to receive most anything worth listening to. But saying all that, if he wants to work SATS, the 706 is not the right radio. MK

I live out in the middle of nowhere, where it's pretty quiet. Not much interference from pagers, cell phones, etc. Is the receiver still bad under these conditions?

I used an original 706 and more recently a MKIIG. The vhf/uhf sections aren't spectacular, but they are OK. For SAT work, the 847 would be a lot better, but if used mostly for HF the 706 is a far better radio. I found the HF side of the 847 to be less than adequate.

Remove bottom cover.

Find the voice module plug-in.Right behind it you will see 4 pots

R993 144 mhz power adj
R991 50 mhz power adj
R989 HF bands power adj
R990 AM power adj

You can tweak these to up the power suggest on hf doing it on 40 meters. you can get close to180
watts on 40-75 meters about 125 to 150 on 20-10.

The pots are very small be careful not to use something to big. the are all metal pots.

On the other hand, Drake is known for their customer service, too. I don't know if they still service the TR7, but there are many of them about. They are definitely still in business, and in Ohio.

I have had two, and was very pleased with both. You get a superb 0-30mhz receiver (isn't the Corsair ham bands only?), and I think 200w of output.

The TR7 is also constructed of a motherboard and plug in cards, and is easily modifiable to work on WARC bands.

Everything I've had from both companies has been great. Perhaps the Corsair would have the edge if you were a CW-man, but otherwise I'd recommend the TR7.

Regards,

John KB5AG

Bill

You mentioned the squelch hysteresis. This the only thing about Icoms I find annoying. I have really had no other "bugs". I, too, find the "tight" squelch to be an aggravation. Set it too loose, you have that annoying popping and everything sets the rig to squawking (store cash registers, line noise, etc.). Set it too tight, it misses weak signals--as you said. Methinks I'm gonna get a schem for my 706s (I have 2) and see if there is a way to soften that darned squelch. While it can be annoying to get that little "tail" at the end, it sure beats having to either run the squelch in "popping" mode, or tighten it up so that signals get missed.

Will the new IC-756PROII have the typical Icom Bugs ?
I have purchased many new Icom radios in my 15 years of being a ham. I purchased all these radios in good faith only to find out there was always at least one major flaw (if not more) in the radio. Typically this flaw was usually something you would take for granted that the radio would do. This is very frustrating considering Amateur equipment is not easily refundable (at least not without 15% restocking fee) unlike consumer electronics which usually offer a no questions asked return policy.

In the late 80's I purchased a brand new Icom IC-761 over a Kenwood TS-940. When I got it home I realized it would not memorize split freq (as required in repeater operation) into a memory channel. I had just upgraded from an old Kenwood ts-440, what I considered a much lower quality radio. I thought I was upgrading, but with this one flaw I felt it was a step down when operating FM Repeaters. In fairness on HF there was no comparison, the 761 was far superior.

A couple of years later I purchased a new IC-735 I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, although there was no accommodation for Pl tone from the factory.

In or around 1995, I then purchased a new IC-736. I was pleased to see that Icom dedicated 10 memories (90-99) on this radio to split operation, and even happier to see that pl was added. Only to find out that the Pl tones were not frequency agile (from outside the radio with out breaking out the soldering iron) as one would have hoped, I was forced to wire in an outboard Communication Specialist pl deck TE-64 to operate repeaters with different pl tones.

In 1998, I then purchased new a IC-756 , when I got it home I was glad to see that its pl tones were now frequency agile through the "set mode", this helped in operating repeaters. Now only to discover that the firmware was again inhibited from storing a split freqs and

pl into a memory. (in my opinion this was going back two generations) With a call to tech support, talking to Gary, I realized at that Icom was not even aware that the radio would not store a split. The radio does have "quick split" function which was also on my 736, but this had always seemed like an after thought to me. The quick split feature does not work well if you live in an area where repeaters utilize 2 different repeater splits in the band plan. For example, my local 6m repeater has a one meg split, yet others within a 100 mile radius have a 500kc split. A few other observations I made on the radio. Icom now had eliminated the separate controls for the squelch and RF gain. These separate controls have been around since the days of the 745, 751, 751A, 761, 735, 736. There were many times I kept the RF gain up to eliminate the background noise, and closed the squelch to monitor a frequency on ssb, and now the elimination of the adjustable Noise Blanker width . Am I the only one who misses these features, what's next ?

In 2001, I then purchased a new Icom 756 Pro hoping that all the bugs in the firmware would have been cleaned up by now. When I got the radio home I observed that the FM operation was no different than my original Icom 756. I then contacted Icom customer service, again talking to Gary he informed me that Icom never did fix that "flaw" All the Kenwoods both new and old (570, 450 and 690), and all much lower price tag do it, and do it well on FM. Why cant the higher end competition grade Icom's memorize separate transmit and receive frequencies in memory with a pl ?

I now own a 706MarkIIG and an Icom 746 (purchased used) . On these two radios the firmware works perfectly in the FM repeater mode. Yes, I can even operate with split Pl on TX and RX !! I know that the 746 was released before the "PRO" and one would think that the firmware upgrades would have been available on the PRO ! Yes it would have been nice if the radios again had separate squelch and rf-gain controls, and adjustable noise blankers. Who wants to open up a radio just to adjust a noise blanker, especially on the 706 when operating mobile. Unfortunately 706 and 746 squelch circuits appear not to have any hystersis in their squelch circuit to track a weak signal. This is very annoying when you are operating on the fringe of the repeater mobile , or just working a weak signal. The squelch constantly keeps popping.

Icom radios work very well on the HF bands. If they didn't, I would not have purchased so many of them. Also I am sure these "flaws" might only be noticeable to a hand full of us that work FM on the higher frequencies. But if Icom as a manufacture puts FM in the radio, why not at least do it the right way ?

I now see advertisements in QST for the now upgraded version of the PRO. My question is, will the "upgraded PRO" have the same bugs in Firmware that inhibited repeater operation that the past two generations of the 756 ? Will Icom re introduce separate rf-gain and squelch controls ? Perhaps add an adjustable noise blanker ??? One thing you can be sure of , most likely Icom will increase the price !!

Drake still offers limited parts for the tr7, but no shop service. Details are
at their web site, http://www.rldrake.com

On the other hand, there may be shops/individuals out there that could service
the rig -- they might turn up in an http://www.google.com search...

Thanks to all that responded. I asked ICOM about the problem and they
responded, saying that the normal "POWER OFF" current drain for the IC-T7H
is 2-5 ma. That would certainly explain the 10 day life of a fully charged
650 mah nicad with power off. I still like the radio but sure wish the
power-off current was a great deal less.

hi terry i have owned both, the tr7 has excellent receiver for general coverage use especially if you can get one with all the filters installed, it runs approx 150 to 160 watts output the finals are indestructible in fact part of the alignment procedure for the tx is to remove the antenna apply full drive power and adjust the vswr foldback circuit for 20 watts (that really impressed me) one thing about the tr7 though is it can be a little drifty in freq .
the corsair have very good receiver, excellent transmitter easy to use if i had to choose between these two don't know what i would do, more than likely would choose the tentec as service and parts are still available.

Yes it will not preform well. It is not designed for proper power
dissapation and biased for proper operation at that power level. Not
mentioning the cooling and the finals going bad in short order. Most rigs
are not made to run full capable power even though they can be tuned there.
The adjustment pots are never turned all the way up from the factory. Caught
quite a few where we found the pots cranked all the way to the stop with
blown finals.

3805. Re: Mounting Hi Pwr 2m Rig Near Airbag Control? ('98 Honda Civic)

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-27 02:16:03 UTC
From: mlinden@enteract.com
Message-ID: <9ou253$3m0$1@bob.news.rcn.net>
Source record: 54109

Well, I guess I stirred a little interest with my query about inadvertent airbag deployment...

I checked the ARRL Web site regarding this subject and found that the ARRL has never heard of an automotive safety system (antilock braking system, airbags, etc.) being affected by an amateur transceiver. They have also gathered some information from the automotive manufacturers. Some of the automotive manufacturers didn't really provide any information. However, others, like GM and Toyota provided quite a bit.

Honda told the ARRL that they are unaware of any problems related to amateur equipment in their cars. However, when I tried to get some information from them the representative told me that Honda suggests that 'aftermarket' two-way radio equipment should not be installed in their cars -- I imagine finding anyone that really knows about something like this at an automotive manufacturer is difficult at best.

I appreciate everyone's input!

Source record: 54115

I have personally witnessed an 800 MHz portable transmitter causing a Ford Taurus cruise control to accellerate, so these things can happen, but are more likely to happen if a lot of energy is radiated directly near the vehicle electronics.

If you are going to do it, your biggest risk would be if you don't have an effective ground on the rig AND the antenna. Mag mount and other temporary mounted antennas have a lot of RF flowing down the coax braid. You don't need that field radiating near the vehicle electronics, likewise you will get noise from the electronics into the antenna. Bolt and securely ground the radio unit, and install a fixed antenna (NMO mounts are great), dress the cables in a direction perpendicular to the vehicle wiring, close to the body metal, make sure the antenna is properly tuned.

Absolutely. If these rigs could do 150-180 watts safely and cleanly,
they would be sold that way to get more money. Cranking the power up
on these rigs is only disabling the ALC. The radio will sound ultra
nasty as the distortion content goes thru the roof, and like you say,
it's hell on the finals. Good way to trash a perfectly good radio. Not
to mention the increase in signal strength from the normal 100w output
is hardly noticable. MK

Hello friends

I'm looking for the mod to be applied to an old TS830S in order to enable TX
on the Warc Bands
I got some info on the net ,consisting of grounding Pin 12 of IC23 in the
digital unit Pcb.

Unfortunately ,on the boards and on the schematic diagrams,there is no sign
of any IC23
or any IC reference whatsoever.

If someone could help ,it would be very much appreciated

3818. Testing tubes - need advice.

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-27 13:11:57 UTC
From: David Pinto <dpinto@bu.edu>
Message-ID: <9ov8it$5j2$1@news3.bu.edu>
Source record: 54122
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Thanks to all for the great advice!!

I've decided to forge ahead with my tube education. I've ordered the schematics for my Knight 600A tube tester, so I'll check that out. And I've decided to try my hand at building a transconductance meter as well testing the other specs the checker doesn't handle. Testing all those tubes 'in circuit' is a great idea - except that I don't have the circuit to test them in, only the one tube radio in my shop.

Still need the tubes for my Verona, but maybe I can do some swapping down the line when I've got my tubes all checked out.

Thanks!
David Pinto

> Icom Mobiles.....Kirk

My Yaesu JUNK is a FT-8100 with the "Yaesu Tx Virus" ! You can't tx on
high power without the signal cutting out. Yaesu won't admit that their radios
have a problem on transmit and want to blame the owner of the radio for having
faulty equipment, AE antenna, power supply, ect. So to fix mine I'm replacing it
with a new TM-G707A which should be here today or tomorrow. For all you
Yaesu owners if your on HIGH POWER and someone says your breaking up
their not pulling your leg, just drop back one power level setting and see if they
say it's not acting up now, if so you have the "YAESU TX VIRUS".

Gotta go I think I hear the UPS truck now..... ;^)

From: Hum <hum@libero.it>
Message-ID: <9ovi1v$i4j$1@nreada.inwind.it>
Source record: 54126

I have repaired a control box for the YAESU G-400RC rotor that had a
failure.
Now my problem is that the control box needs recalibration of the internal
trimmers (VR1, VR2 and VR3).
I have tried to find the correct setup but without success.
At this time everything is working unless that there is no linear
corrispondance between the rotor position and the control box indicator.
Do anybody knows how to setup those trimmers?
Many thanks in advance.

I think it's easier to just clip the diodes D4-D5-D6 on the rf board.
This is the same method used on the 530 also. I looked at the mods
site, and if you look at the warc mod for the 530 , it shows this
diode clip method. And also in my 830 service manual, they say for
warc to clip the diodes. They make no mention of the other methods.
The diodes are up front on the rf board. Right under the front of the
bandswitch near the front panel. I even decided to pull my cover off,
as I wasn't sure how they did mine. " I didn't do it on mine". Mine
had the 3 diodes clipped. I think I'd go that route. MK

3828. Radio Shack HTX-404 PLL Error

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-27 21:05:57 UTC
From: Paul Herrera <p-herrera@neo.tamu.edu>
Message-ID: <3BB394B5.B3F259F2@neo.tamu.edu>
Source record: 54132
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I've had this HT for a little more than a year, just long enought for the warranty to run out. When I turn it on I get the PLL error code. I tried the suggestion about turning it off and on again, same problem. I've set the HT back to default mode, no dice. The HT has no modifications, uses the supplied rubber ducky and a fresh set of batteries, but seconds after turning it on it shows the error code. Is there a fix for this problem. If not how much will sending it to Rat Shack for repair set me back?

In wine there is wisdom,
in beer there is strength,
in water there is bacteria

FOR SALE:

Kenwood SP-31 loudspeaker. Will sell for reduced price to move it out.

If anyone is interested, e-mail me for a picture, and we can talk
trade or buy price.

This is in excellent shape, and has the 3 switchable audio filters,
and A-B switch etc.

Would work great with any Kenwood rig.

3830. Re: Yaesu G400-RC control box

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-27 21:30:25 UTC
From: CJ <cjr@visi.com>
Message-ID: <3BB39A71.966CFF0@visi.com>
Source record: 54134

Hum -

The book says:

Press the LEFT switch and allow the rotator and indicator to turn fully
counterclockwise until rotation stops. The indicator should now point to
0 deg (North). If not, loosen the screw in the center of the indicator
needle and reset the needle.

Press the RIGHT switch and allow the rotator and indicator to turn fully
clockwise. The indicator should point to 5 deg (East of North). If not,
adjust the calibration potentiometer on the rear panel.

Finally, after installation on the tower with everything turned fully
counterclockwise and antenna pointed North:

Confirm the calibration of the controller indicator by rotating the
antenna precisely 360 deg so that the antenna itself is pointing the
same direction as before. If the indicator does not show exactly 0 deg
again, adjust the FULL SCALE potentiometer on the rear of the controller
slightly, and repeat this step.

Looks to me like the "calibration" and the "FULL SCALE" potentiometers
are the same. Not a clue from the schematic about any other pots nor
which one is the Calibration/Full Scale pot without taking my controller
apart.

Good luck es 73, CJ K0CJ

Good

The FCC used to have a FTP directory with flat file extracts of their ham radio callsign database. It vanished some time ago.

Anybody know where to find it?

Thanks and 73,
Jim

Hi Everybody!

The University of Manitoba Amateur Radio Society is currently looking for a HF antenna tuner for our rig. We are running an old Kenwood 830 tube radio, and it peaks at 200watts, so we need something that can handle it. Please contact me, Christian, at ve4cmt@rac.ca with details if you can help us out.

Thanks!

Christian

3840. Re: TS830S mod for TX on WARC bands ?

Newsgroup: rec.radio.amateur.equipment
Date: 2001-09-28 00:33:11 UTC
From: JB <ac6tk@nospamcybertime.net>
Message-ID: <9p0giv$1rq3$1@madmax.keyway.net>
Source record: 54144

You could do that, but make sure you don't clip the wrong diodes or anything else or you might have to extricate the whole RF board to fix it. It's lots safer to just clip the wire from the connector on the AF board. It does nothing else, and it's easily accessible from the bottom.

The only reason to clip individual diodes, was that no one knew which bands we were really going to get.

:
: I think it's easier to just clip the diodes D4-D5-D6 on the rf board.
: This is the same method used on the 530 also. I looked at the mods
: site, and if you look at the warc mod for the 530 , it shows this
: diode clip method. And also in my 830 service manual, they say for
: warc to clip the diodes. They make no mention of the other methods.
: The diodes are up front on the rf board. Right under the front of the
: bandswitch near the front panel. I even decided to pull my cover off,
: as I wasn't sure how they did mine. " I didn't do it on mine". Mine
: had the 3 diodes clipped. I think I'd go that route. MK

3841. Re: Best Six Meter RIG ???

The Icom 706 is the best 6 meter rig available.

It has Subaudible tone encode and decode built in

Also, I found out that the hustler mobile antenna resonates exactly in the
middle of the 6 meter band with no coil installed.

Have fun.

Thanks for the info. After some poking this turned upr:
ftp://ftp.fcc.gov/pub/Bureaus/Wireless/Databases/uls/complete/

The files are big for a 56k modem, so it will take some time to see if
they are the right ones. The names look reasonable.
